

THE STATE CORPORATION COMMISSION  
OF THE STATE OF KANSAS

In the Matter of the Joint Application of )  
Great Plains Energy Incorporated, Kansas )  
City Power & Light Company and Westar ) Docket No. 16-KCPE-593-ACQ  
Energy, Inc. for Approval of the )  
Acquisition of Westar Energy, Inc. by )  
Great Plains Energy Incorporated. )

**NOTICE OF RE-FILING CURB'S PRE-FILED DIRECT TESTIMONY WITHOUT  
REDACTIONS**

The Citizens' Utility Ratepayer Board ("CURB"), pursuant to the *Order of Prehearing Motions* ("Order") issued by Kansas Corporation Commission ("Commission") on January 26, 2017, hereby files the un-redacted version of Andrea Crane's Direct Testimony that CURB filed with redactions on December 16, 2016. CURB also states the following:

1. The Order requires all parties' to remove confidential redactions from testimony except for information that fell into one of the following categories: (1) attorney-client privilege, (2) attorney work-product, or (3) critical infrastructure information which poses a security risk if made public.<sup>1</sup>

2. CURB has reviewed the *Confidential Direct Testimony of Andrea Crane on Behalf of CURB*, filed on December 16, 2016, in good faith, and finds that all confidential redactions in her testimony do not fall within the categories mentioned above, and therefore should be removed. The *Direct Testimony of Stacey Harden on Behalf of CURB*, filed on December 16, 2016, does not contain any redacted confidential material.

WHEREFORE, CURB respectfully submits its un-redacted pre-filed direct testimony for Andrea Crane.

---

<sup>1</sup> Order, ¶ 6.

Respectfully submitted,

David W. Nickel, Consumer Counsel #11170

Thomas J. Connors, Attorney #27039

Appendix A - List of Prior Testimonies

1 **I. STATEMENT OF QUALIFICATIONS**

2 **Q. Please state your name and business address.**

3 **A.** My name is Andrea C. Crane and my business address is PO Box 810, Georgetown, CT  
4 06829.

5  
6 **Q. By whom are you employed and in what capacity?**

7 **A.** I am President of The Columbia Group, Inc., a financial consulting firm that specializes in  
8 utility regulation. In this capacity, I analyze rate filings, prepare expert testimony, and  
9 undertake various studies relating to utility rates and regulatory policy. I have held several  
10 positions of increasing responsibility since I joined The Columbia Group, Inc. in January  
11 1989. I became President of the firm in 2008.

12

13 **Q. Please summarize your professional experience in the utility industry.**

14 **A.** Prior to my association with The Columbia Group, Inc., I held the position of Economic  
15 Policy and Analysis Staff Manager for GTE Service Corporation, from December 1987 to  
16 January 1989. From June 1982 to September 1987, I was employed by various Bell Atlantic  
17 (now Verizon) subsidiaries. While at Bell Atlantic, I held assignments in the Product  
18 Management, Treasury, and Regulatory Departments.

19

20 **Q. Have you previously testified in regulatory proceedings?**

21 **A.** Yes, since joining The Columbia Group, Inc., I have testified in over 400 regulatory  
22 proceedings in the states of Arizona, Arkansas, Connecticut, Delaware, Hawaii, Kansas,

1 Kentucky, Maryland, New Jersey, New Mexico, New York, Oklahoma, Pennsylvania, Rhode  
2 Island, South Carolina, Vermont, Washington, West Virginia and the District of Columbia.  
3 These proceedings involved electric, gas, water, wastewater, telephone, solid waste, cable  
4 television, and navigation utilities. A list of dockets in which I have filed testimony since  
5 January 2008 is included in Appendix A.  
6

7 **Q. Have you previously testified in regulatory proceedings in Kansas?**

8 **A.** Yes, I have. As shown in Appendix A, I have testified in numerous proceedings in Kansas,  
9 including in cases involving Kansas City Power and Light Company (“KCP&L”) and Westar  
10 Energy (“Westar”). I have also testified in cases involving Atmos Energy, Kansas Gas  
11 Service, Empire District Electric Company, Black Hills Gas Company, Midwest Energy and  
12 others.  
13

14 **Q. Have you previously participated in other proceedings involving utility mergers and**  
15 **acquisitions?**

16 **A.** Yes, I have filed testimony and participated in numerous proceedings involving utility  
17 mergers and acquisitions, including proceedings involving: Delmarva Power and Light  
18 Company and the Atlantic City Electric Company; Potomac Electric Power Company and  
19 Baltimore Gas and Electric Company; Conectiv Power Delivery and PEPCO Holdings, Inc.  
20 (“PHI”); Exelon Corporation and PHI.; Orange and Rockland Utilities and Consolidated  
21 Edison; New Century Energies, Inc. and the Northern States Power Company; New England

1 Electric System and Eastern Utility Associates; Consolidated Edison and Northeast Utilities,  
2 Inc.; Texas-New Mexico Power Company (“TNMP”) and Public Service Company of New  
3 Mexico (“PNM”); New Mexico Gas Company (“NMGC”) and TECO, Inc.; and Midwest  
4 Energy, Inc. and Westar Energy, Inc. I also participated in the 1997 merger proceeding  
5 involving Western Resources, Inc. and KCP&L. In addition, I have participated in cases  
6 involving the sale of Atlantic City Electric Company’s B.L. England Generating Station,  
7 TNMP’s acquisition by S.W. Acquisition, L.P., and the sale of PNM’s gas assets to  
8 Continental Energy Systems, Inc., the transaction that resulted in the formation of NMGC.

9  
10 **Q. What is your educational background?**

11 **A.** I received a Master of Business Administration degree, with a concentration in Finance, from  
12 Temple University in Philadelphia, Pennsylvania. My undergraduate degree is a B.A. in  
13 Chemistry from Temple University.

14  
15 **II. PURPOSE OF TESTIMONY**

16 **Q. What is the purpose of your testimony?**

17 **A.** On June 28, 2016, Great Plains Energy, Inc. (“GPE”), KCP&L, and Westar Energy, Inc.  
18 (“Westar”, collectively “Joint Applicants”) filed an Application with the Kansas Corporation  
19 Commission (“KCC” or “Commission”) seeking approval for the acquisition of Westar by  
20 GPE, the parent company of KCP&L. The Columbia Group, Inc. was engaged by the  
21 Citizens’ Utility Ratepayer Board (“CURB”) to review the Application, to evaluate the

1 impact on Kansas ratepayers, and to develop recommendations to the KCC. I am providing  
2 testimony on CURB's overall recommendation. I also discuss the degree to which the  
3 proposed transaction meets the merger standards that have set forth by the KCC. Stacey  
4 Harden is also submitting testimony on behalf of CURB, addressing the impact of the  
5 proposed transaction on reliability and customer service issues.

6  
7 **Q. Please explain how your testimony is organized.**

8 **A.** Section III of my testimony contains a brief summary of my conclusions and  
9 recommendations relating to the proposed transaction. In Section IV of my testimony, I  
10 discuss the KCC's merger standards and evaluate the extent to which the proposed  
11 transaction complies with those standards. In Section V of my testimony, I discuss several  
12 additional safeguards that the KCC should impose if it approves the transaction.

13  
14 **III. SUMMARY OF CONCLUSIONS AND RECOMMENDATIONS**

15 **Q. What are your conclusions and recommendations regarding GPE's proposed**  
16 **acquisition of Westar and the related approvals being requested in this case?**

17 **A.** There are several factors that make GPE a good candidate to acquire Westar. GPE, through  
18 KCP&L, already operates an electric utility that is contiguous to the Westar service territory.  
19 The KCC is familiar with KCP&L, and KCP&L is familiar with regulation in Kansas.  
20 KCP&L and Westar already share ownership of several generating facilities. These factors  
21 are all favorable and suggest that the acquisition of Westar by GPE could result in cost

1 savings that are at least as great as an acquisition of Westar by some other entity.

2 However, CURB also has serious concerns about the purchase price and the proposed  
3 financing of this transaction. In summary, GPE is paying a high price for Westar, that does  
4 not appear to be justified based on the projected level of savings. Moreover, GPE is  
5 proposing to finance this transaction largely with debt, which will increase GPE's financial  
6 risk, could jeopardize the credit ratings of the Joint Applicants, and could result in higher  
7 financing costs and/or deteriorating service for Kansas customers. Therefore, while the  
8 proposed transaction has some beneficial features, the proposed transaction as currently  
9 structured is not in the public interest. Accordingly, CURB recommends that the KCC deny  
10 the Joint Applicants' request regarding the acquisition of Westar by GPE at this time.

11  
12 **Q. Was the primary purpose of the transaction to bring lower rates or improved service to**  
13 **Kansas ratepayers?**

14 **A.** No, it would be naïve to assume that this transaction is being driven by the desire of  
15 management and shareholders to bring lower rates to electric customers in the KCP&L and  
16 Westar service territories. As demonstrated in numerous presentations and other material  
17 provided in discovery in this case, this transaction is being driven by the desire to  
18 handsomely reward Westar shareholders and to find a source of new earnings for GPE  
19 shareholders. Ratepayers are a means to these ends, but providing benefits to ratepayers is  
20 not the primary focus of the proposed transaction.

1 **Q. Are there changes that the KCC could order to the ratemaking proposals put forth by**  
2 **the Joint Applicants that would alleviate CURB's concerns?**

3 **A.** I don't think so. As will be discussed at length later in my testimony, CURB's fundamental  
4 concerns relate to the purchase price and related financing of the underlying transaction. I do  
5 not believe that there is any action that the KCC could take within the context of the current  
6 agreement that would modify either the purchase price or the related financing. Therefore,  
7 while I will suggest some ratepayer protections that the KCC should adopt if it approves the  
8 proposed transaction, I do not believe that there are any conditions, restrictions or  
9 requirements that the KCC could impose that would overcome the fundamental financial  
10 flaws of this proposed transaction and the attendant potential harm to ratepayers.

11  
12 **Q. Please briefly outline the additional ratepayer protections that you recommend the**  
13 **KCC adopt if it decides to approve the proposed transaction, in spite of the concerns**  
14 **expressed by CURB.**

15 **A.** If, in spite of concerns expressed by CURB, the KCC decides to authorize the proposed  
16 transaction, then it should require the following additional provisions as a condition of its  
17 approval: a) The KCC should utilize the consolidated GPE capital structure for ratemaking  
18 purposes, b) Westar and KCP&L dividends to GPE should be limited to the net income  
19 earned by the utilities, c) no dividends should be paid by Westar or KCP&L to GPE unless  
20 GPE and its subsidiaries all maintain investment grade ratings, d) costs related to common  
21 branding should not be recovered from ratepayers, e) any transition costs that the KCC

1 permits the Joint Applicants to recover from ratepayers should be amortized over a  
2 reasonable period of time and should not accrue carrying costs, and f) any movement toward  
3 rate consolidation should move KCP&L toward the Westar rate structure.

4  
5 **IV. OUTLINE OF THE PROPOSED TRANSACTION**

6 **Q. Please provide a brief description of Westar.**

7 **A.** Westar is the largest electric utility in Kansas, with its principal office in Topeka, Kansas.  
8 Westar, and its wholly-owned subsidiary Kansas Gas and Electric Company (“KGE”),  
9 provide service to approximately 702,000 customers in central and eastern Kansas.<sup>1</sup> Westar’s  
10 customer mix is approximately 33% residential, 28% industrial, and 39% commercial. It has  
11 a service area of roughly 10,000 square miles.<sup>2</sup> The Company operates and coordinates  
12 35,000 miles of transmission and distribution lines. In addition, it has approximately 6,300  
13 MW of electric generation capacity, including nuclear, coal, natural gas, and renewable  
14 generation.

15  
16 **Q. Please provide a brief description of GPE.**

17 **A.** GPE is a public utility holding company headquartered in Kansas City, Missouri. GPE owns  
18 KCP&L, a regulated electric utility providing service in eastern Kansas and western  
19 Missouri. GPE is also the parent company of Greater Missouri Operations Company  
20 (“GMO”), which provides regulated electric service in Missouri. GPE is also the parent

---

<sup>1</sup> “Westar” will be used throughout this testimony to refer to both the parent company and to the wholly-owned subsidiary, KGE.

1 company of GPE Transmission Holding Company, which owns 13.5% of Transource Energy,  
2 LLC, which provides competitive electric transmission projects. GPE's regulated electric  
3 operations include approximately 749,600 residential customers, 99,100 commercial  
4 customers, and 2,500 industrial customers. GPE has 6,446 MW of electric generation  
5 capacity fueled by various sources, including nuclear and coal, and over 26,000 miles of  
6 transmission and distribution lines.

7 Westar and KCP&L are together the majority holders of the Wolf Creek Nuclear  
8 Generating Station, each holding a 47% ownership interest. The two utilities also jointly own  
9 the La Cygne Generating Station, which is a two-unit 1400 MW coal-fired power plant and  
10 the three-unit Jeffrey Energy Center, a 2,150 megawatt coal-fired power plant.

11  
12 **Q. Please provide a description of the proposed transaction.**

13 **A.** GPE announced on May 31, 2016, that it had reached an agreement, via a competitive  
14 auction process initiated by Westar, to acquire 100% of the outstanding stock of Westar for  
15 approximately \$12.2 billion including the assumption of Westar debt of \$3.6 billion.  
16 Pursuant to the agreement, GPE will pay \$60 per share for every outstanding share of Westar  
17 stock, comprised of \$51 per share to be paid in cash (or 85% of the purchase price) and the  
18 balance in GPE common stock. The total cash payment is estimated to be \$7.226 billion,  
19 based on 141.691 million Westar shares outstanding as of June 30, 2016.<sup>3</sup> In addition,  
20 Westar shareholders will receive another \$1.246 billion of GPE stock. Finally, \$47.8 million

---

2 Testimony of Mr. Ruelle, pages 6-7.

3 Great Plains Energy Incorporated Proxy Statement ("Proxy Statement"), page 147.

1 of Westar equity compensation awards will be settled. Thus, the total estimated purchase  
2 price to shareholders is \$8.520 billion. The assumption of the \$3.6 billion of Westar debt  
3 will bring the total value of the transaction to approximately \$12.2 billion. The transaction  
4 will create the largest electric utility company in Kansas.

5 The fair value of the assets acquired (net of current liabilities and long term debt) is  
6 \$3.723 billion.<sup>4</sup> The compensation paid to shareholders of \$8.520 billion for these assets  
7 results in an acquisition premium, to be recorded as Goodwill, in the amount of \$4.816  
8 billion. Thus the transaction can be viewed as GPE paying Westar shareholders \$8.520  
9 billion for assets with a fair value of \$3.723 billion. Put another way, GPE is paying Westar  
10 shareholders approximately \$2.30 for every \$1.00 of assets acquired in the transaction.

11 With regard to market value, the purchase price of \$60 per share represents a  
12 premium of 36.1% on the “undisturbed” stock price of March 9, 2016, which was the last  
13 trading day before an article appeared stating that Westar may be exploring a sale. Once that  
14 information became public, the Westar stock price increased significantly, from \$44.08 on  
15 March 9<sup>th</sup> to \$52.92 on May 27, 2016, which was the last trading day prior to the merger  
16 agreement being signed. Thus, the \$60 per share price presents a premium of 13.4% over the  
17 stock price immediately prior to the merger agreement being signed.

18  
19 **Q. How does GPE expect to finance the proposed transaction?**

20 **A. GPE expects to finance the cash requirement of \$7.226 billion by issuing \$4.4 billion in**

---

4 Id., page 151.

1 long-term debt as shown at page 149 of the Proxy Statement. The remainder of the financing  
2 is expected to be \$750 million of mandatory convertible preferred equity from the Ontario  
3 Municipal Employees Retirement System (“OMERS”)<sup>5</sup>, and \$2.35 billion of equity in the  
4 form of common stock and mandatory convertible preferred stock. The common stock and  
5 non-OMERS mandatory convertible preferred stock have now been issued and will be  
6 discussed in more detail later in this testimony. The mandatory convertible preferred stock  
7 will pay a preferred dividend for three years, and then convert to common equity, as  
8 discussed on page 16 of Mr. Bryant’s testimony. GPE has entered into an unsecured 364 day  
9 bridge loan agreement with Goldman Sachs for \$8.0 billion in order to fund the cash  
10 consideration for the merger, although GPE does not expect to draw material amounts from  
11 the credit line.<sup>6</sup> The \$8.0 billion figure included \$.5 billion for working capital needs, which  
12 has already been terminated with an amendment to the loan agreement (see page 14 of the  
13 Proxy Statement). All financing will occur at the GPE Holding Company level and no debt  
14 will be issued, guaranteed or have any recourse to any utility subsidiary.<sup>7</sup> The parties expect  
15 a closing of the transaction by the spring of 2017, or, if extended under terms provided in the  
16 proposed agreement, by no later than November, 2017.

17 Mr. Bryant offers testimony that GPE’s utility subsidiaries, based on the analysis of  
18 his staff, Goldman Sachs acting as GPE’s financial advisor, and the credit rating agencies,  
19 will maintain their investment grade credit ratings after the acquisition, as will the GPE

---

6 Testimony of Mr. Bryant, page 9.

7 Id., page 10.

1 holding company.<sup>8</sup>

2

3 **Q. How was the acquisition agreement developed and the purchase price for Westar**  
4 **determined?**

5 **A.** In early 2015, several potential suitors expressed interest to Westar CEO, Mr. Ruelle, in a  
6 possible business combination with Westar. When the more focused of these discussions  
7 failed to progress, the Westar Board, at its February 22, 2016 meeting, decided it would like  
8 to explore a more competitive process with several parties at once, and it directed  
9 Guggenheim Securities to identify and contact viable potential bidders.<sup>9</sup> This effort resulted  
10 in contact with GPE, another early counterparty, and fourteen other companies. Altogether  
11 nine of these companies entered into confidentiality agreements with Westar, but two of  
12 them dropped out of the process before conducting due diligence calls with Westar  
13 management, and two more dropped out before April 5, 2016, the deadline for submitting  
14 non-binding indications of interest including price and other terms. All five of the remaining  
15 prospective bidders were invited to provide definitive proposals and were given individual  
16 management presentations over the course of several weeks in April and May, and all five  
17 companies were given access to a confidential electronic data room. Three companies,  
18 including GPE, submitted definitive proposals. GPE was authorized by its Board to offer up  
19 to \$60 per share, consisting of 90% cash and 10% stock. On May 23, 2016 GPE offered  
20 \$58.25 per share with 85% to be paid in cash. GPE also included a “collar” mechanism

---

8 Id., page 8.

9 Proxy Statement, page 57.

1 around its stock price of plus or minus 7.5% to help fix and protect the value of its stock for  
2 the benefit Westar shareholders. The other bidders offered both lower price and a lower  
3 proportion of cash to Westar stockholders. Westar elected to continue discussions with GPE  
4 and one other bidder to determine their best and final offers, but it did not terminate  
5 discussions with the other bidders, pending the outcome of its ongoing negotiations. Westar  
6 informed GPE and the other selected bidder that the mix of cash and stock and the likelihood  
7 of achieving a closing, including the likelihood that regulators would find the transaction in  
8 the public interest, would be key factors in their deliberation. After a series of meetings  
9 between GPE and its financial and legal advisors, GPE increased its bid to \$60, still with an  
10 85% cash component, while agreeing to other terms important to Westar, such as termination  
11 fees. The Westar Board, at its May 29, 2016 meeting, voted unanimously that the merger  
12 agreement with GPE was in the best interests of Westar and its Shareholders.<sup>10</sup>

13  
14 **Q. What strategic rationale do the parties offer to justify the proposed transaction?**

15 **A.** Westar witness Mr. Ruelle testifies at page 3 of his direct testimony that Westar initiated a  
16 process to identify a potential suitor because “...we realized that in our industry, a larger  
17 energy company would be better suited to manage costs, regulatory risks and decreasing  
18 sales, while modernizing the grid and serving our customers.” He argues that the need to  
19 moderate future rate increases naturally led to the consideration on increasing savings due to  
20 economies of scale that could be enjoyed by a larger entity, and he points to the ongoing

---

<sup>10</sup> Proxy Statement, pages 60-65.

1 consolidation in the electric industry as support for that position.<sup>11</sup> In addition, Mr. Ruelle  
2 states that Westar believed that choosing its own path and suitor were preferable, in that it  
3 could more likely dictate terms in a competitive bidding process that would protect the  
4 interests of its customers, employees and communities, rather than just its shareholders.<sup>12</sup>  
5 Mr. Ruelle claims that in selecting GPE, Westar found a partner where the majority of  
6 customers would be in Kansas, instead of a long- distance purchaser for which Kansas  
7 customers may comprise a very small piece of the customer base.<sup>13</sup> In addition, Mr. Ruelle  
8 contends that interest rates have increased the value of utility stocks, and have also made  
9 financing an acquisition more affordable. He testifies that this fact, coupled with an older  
10 workforce that is currently producing large natural attrition, makes the current timeframe  
11 attractive in that merger efficiencies in staffing can be captured in large part through attrition  
12 rather than layoffs.<sup>14</sup>

13 GPE witness Mr. Bassham echoes the points above, and stresses the opportunities for  
14 efficiencies between the two companies, enhanced by their adjacent service territories, which  
15 he expects will serve to reduce future rate increases. He cites the testimony of Mr. Kemp that  
16 provides an estimated of \$65 million in savings in the year after the closing, with savings  
17 growing to \$200 million in the third full year after the transaction closes.<sup>15</sup>  
18

11 Testimony of Mr. Ruelle, page 9.

12 Id., page 13-14.

13 Id., page 15.

14 Id., page 16.

15 Testimony of Mr. Bassham, page 10.

1 **Q. Do the presentations made to the Westar Board of Directors bear out the above**  
2 **comments of Mr. Ruelle, which suggest that the proposed transaction is being driven**  
3 **largely by what is in the best interest of utility ratepayers?**

4 **A.** No, I don't believe so. Copies of Westar Board of Directors presentations were made  
5 available in response to CURB-3. While the details of these presentations are marked highly  
6 confidential, there is a clear emphasis on the ability of utility companies to continue to  
7 sustain earnings growth. These presentations, which will be offered into evidence at the  
8 KCC during the evidentiary hearings in this case, suggest that the primary factor motivating  
9 Westar management and its Board of Directors was the premium that Westar could currently  
10 command, and the expected growth in shareholder earnings if the proposed transaction was  
11 approved.

12 In addition, the Proxy Statement makes it clear that this transaction is focused on  
13 shareholder interests. The opening paragraph of the "Background of the Merger" as  
14 discussed on page 52 of the Proxy Statement is as follows:

15 The Westar Board and senior management of Westar regularly review and  
16 evaluate Westar's strategies as part of their ongoing efforts to provide long-  
17 term value to shareholders, taking into account economic, competitive,  
18 regulatory and other conditions, as well as historical and projected industry  
19 trends and developments. As part of these reviews, the Westar Board and  
20 senior management of Westar also periodically consider and evaluate  
21 potential options and alternatives designed to enhance shareholder value,  
22 including, from time to time, potential strategic transactions. (emphasis  
23 added)  
24

1 **Q. Describe GPE's service area and structure following the closing of the proposed**  
2 **acquisition of Westar.**

3 **A.** If the acquisition is consummated, Westar will become a wholly-owned subsidiary of GPE,  
4 and GPE will own Kansas' two largest regulated utility companies. Mr. Bassham at page 4  
5 of his testimony describes the combined service area as covering approximately the  
6 contiguous eastern third of Kansas, the Kansas City metropolitan area on both sides of the  
7 state line, and a large portion of northwestern Missouri. Approximately one-third of GPE's  
8 existing customers reside in Kansas.<sup>16</sup> The acquisition of Westar's approximately 700,000  
9 Kansas electric utility customers will increase GPE's customer count to more than 1.5  
10 million customers, most of which (nearly 950,000) will be in Kansas. The service areas and  
11 customers of each utility will be maintained and will not immediately change as a result of  
12 the proposed acquisition.<sup>17</sup>

13  
14 **Q. Will Westar continue to exist after the proposed acquisition?**

15 **A.** Yes, it will, at least initially. Westar will become a wholly-owned subsidiary of GPE, just as  
16 KCP&L is. Westar will retain its separate legal structure, with the same service territory and  
17 customers as it had prior to its acquisition, but it will no longer be a publically traded  
18 company as all of its stock will be owned by GPE. Following the closing of the transaction  
19 Mr. Bassham will become the chief executive officer of Westar; he will retain his positions  
20 of Chairman of the Board of GPE and KCP&L as well as President and CEO of GPE and

---

16 Testimony of Mr. Bassham, page 8.

17 Id., page 4.

1 KCP&L. There will be one GPE Board member appointed from the Westar Board.

2  
3 **Q. Does GPE expect to introduce a common brand for Westar and KCP&L at some point**  
4 **in the future?**

5 **A.** Yes, it does. While Westar and KCP&L will initially retain their individual identities, GPE  
6 has stated that it intends to eventually implement common branding for the utilities. Longer  
7 term, GPE may also propose to adopt a common rate structure and common rates for Westar  
8 and KCP&L. Any such rate consolidation would be subject to the review and approval of the  
9 KCC.

10  
11 **Q. What are the ratemaking implications of the proposed transaction?**

12 **A.** The proposed transaction will significantly change the capital structure that is financing  
13 utility operations. While the Joint Applicants contend that the Westar and KCP&L capital  
14 structures will not change significantly, the capital structure of GPE will change  
15 significantly. As shown in the response to CURB-41, GPE is currently financed with 49.1%  
16 common equity, which is similar to the equity capitalization of KCP&L. Westar is currently  
17 capitalized with 54.6% common equity. However, on a consolidated basis, the new entity  
18 would have only 32.4% common equity and significantly more debt, with GPE's  
19 consolidated long term debt increasing from 50.4% to 59.0%. For ratemaking purposes, the  
20 Joint Applicants are proposing that the KCC utilize the KCP&L and Westar subsidiary  
21 capital structures, instead of the consolidated GPE capital structure, to set rates.

1 GPE is not requesting the recovery of the acquisition premium or transaction costs  
2 associated with the acquisition, unless “any party to a general rate case of a GPE utility  
3 subsidiary proposes to impute the cost or proportion of debt GPE is using to finance the  
4 transaction to a GPE utility subsidiary for purposes of determining a fair and reasonable  
5 return for a GPE utility subsidiary. In that event, GPE and its utility subsidiaries reserve the  
6 right to seek, in any such rate case, recovery and recognition in retail rates of goodwill (or  
7 transaction costs) related to the Transaction.”<sup>18</sup> Thus, GPE is not proposing that ratepayers  
8 explicitly pay for either the acquisition premium or for transaction costs associated with the  
9 proposed transaction, unless a consolidated capital structure is used in the ratemaking  
10 process. However, as discussed later, the use of a capital structure for ratemaking purposes  
11 that is not representative of the actual financing used in the transaction essentially results in  
12 ratepayers subsidizing the acquisition premium. The transaction costs which have been  
13 identified to date include legal costs, investment banking and other advisory fees.

14 Much of the Joint Applicants’ testimony addresses the cost savings that are expected  
15 to result from the proposed transaction. Mr. Kemp sponsors a cost-savings study that  
16 estimates savings of \$60 million in the first year after the merger and of approximately \$200  
17 million annually by year three. GPE proposes that any merger savings flow through to  
18 ratepayers in the normal rate setting process. Therefore, between base rate cases, costs  
19 savings would be retained by shareholders. When new rates are established as part of a base  
20 rate case, any cost savings realized during the test year would be reflected in new rates. The

---

18 See the response to CURB 115 and the Supplemental Direct Testimony of Mr. Ives at page 12.

1 timing of when such savings are reflected in rates would depend, of course, upon the timing  
2 of base rate case filings, as well as upon any post-test year adjustments that may be included  
3 in approved rates. The Joint Applicants have indicated that they are open to recovery of  
4 proposed transition costs on an amortized basis over some reasonable period of time. Thus,  
5 these costs may be amortized over a multi-year period in a base rate case. Transition costs  
6 could include such costs as consolidation of software systems, and other types of costs that  
7 are required in order to achieve the projected cost savings. Finally, there are some costs that  
8 the Company has not yet classified as either transaction costs, the recovery of which is not  
9 explicitly being requested from ratepayers, or transition costs, which could be recovered  
10 from ratepayers in a base rate case. These would include such items as costs for eventual  
11 branding of both Westar and KCP&L utility operations with a common name and identity.

12  
13 **Q. What is the impact of the proposed transaction on employees of Westar and KCP&L?**

14 **A.** There is no doubt that merger efficiencies will mean fewer employees, as Mr. Ruelle  
15 acknowledges on page 33 of his direct testimony and as Mr. Bassham acknowledges at page  
16 8 of his testimony. However the Joint Applicants stress that there are many attributes of the  
17 agreement that are designed to keep talented employees, such as the provision to maintain  
18 existing compensation levels and benefits for at least two years post acquisition. In addition,  
19 all existing labor contracts will be honored, as will existing benefits for Westar retirees.<sup>19</sup>

20 The Joint Applicants state that a significant portion of staffing reductions may be

---

19 Testimony of Mr. Ruelle, pages 33-34.

1 accomplished by the 4-5% attrition rate that both companies are currently experiencing due  
2 to the retirement of baby-boomers, and which should result in 250-300 job openings per  
3 year.<sup>20</sup> If attrition does not meet all of the targeted employee reductions, then voluntary  
4 reduction offers might be made. Mr. Bassham testified that he is confident that due to the  
5 aging of the workforce there will be employees who would apply for voluntary termination,  
6 if offered.<sup>21</sup> GPE has also agreed to continue Westar's current employee separation plan and  
7 plans to achieve any involuntary reductions from staff at both companies, in both states.<sup>22</sup>

8  
9 **Q. What regulatory approvals are required prior to the consummation of the proposed**  
10 **acquisition?**

11 **A.** The transaction requires approval by the KCC, the Federal Energy Regulatory Commission  
12 ("FERC") and the U.S. Nuclear Regulatory Commission ("NRC"). With regard to Missouri,  
13 the Joint Applicants contended that the Missouri Public Service Commission ("PSC") did not  
14 have jurisdiction over the transaction. The Joint Applicants subsequently reached an  
15 agreement with the Missouri PSC Staff that would avoid the need for the PSC to rule on  
16 jurisdiction.

17 The proposed transaction is also subject to the provisions of the Hart-Scott-Rodino  
18 Antitrust Improvements Act of 1976 ("HSR Act"), as amended, which requires premerger  
19 notifications to be filed with the Federal Trade Commission and the Antitrust Division of the

1 Justice Department.<sup>23</sup> Shareholders for GPE and Westar have already approved the proposed  
2 transaction at a special meeting of Shareholders that occurred on September 26, 2016.  
3

4 **V. COMPLIANCE WITH MERGER STANDARDS**

5 **Q. What factors is the KCC likely to consider in its evaluation of the proposed**  
6 **transaction?**

7 **A.** In its Order On Merger Standards, issued on August 9, 2016 in this docket, the KCC  
8 reiterated that in its review of the proposed transaction, it proposed to utilize the merger  
9 standards previously adopted in 97-WSRE-676-MER (“97-676 Docket”). In that Order, the  
10 KCC stressed that its primary concern is whether the merger will promote the public interest,  
11 and it set forth the following criteria that will be used to determine if the public interest  
12 standard had been met:

13 (a) The effect of the transaction on consumers, including:

14 (i) the effect of the proposed transaction on the financial condition of the newly  
15 created entity as compared to the financial condition of the stand-alone  
16 entities if the transaction did not occur;

17 (ii) the reasonableness of the purchase price, including whether the purchase  
18 price was reasonable in light of the savings that can be demonstrated from the  
19 merger and whether the purchase price is within a reasonable range;

20 (iii) whether ratepayer benefits resulting from the transaction can be quantified;

---

23 Id., page 19.

- 1           (iv) whether there are operational synergies that justify payment of a premium in
- 2                       excess of book value; and
- 3           (v) the effect of the proposed transaction on the existing competition.
- 4       (b) The effect of the transaction on the environment.
- 5       (c) Whether the proposed transaction will be beneficial on an overall basis to state and
- 6           local economies and to communities in the area served by the resulting public utility
- 7           operations in the state. Whether the proposed transaction will likely create labor
- 8           dislocations that may be particularly harmful to local communities, or the state
- 9           generally, and whether measures can be taken to mitigate the harm.
- 10       (d) Whether the proposed transaction will preserve the jurisdiction of the KCC and the
- 11           capacity of the KCC to effectively regulate and audit public utility operations in the
- 12           state.
- 13       (e) The effect of the transaction on affected public utility shareholders.
- 14       (f) Whether the transaction maximizes the use of Kansas energy resources.
- 15       (g) Whether the transaction will reduce the possibility of economic waste.
- 16       (h) What impact, if any, the transaction has on the public safety.

17           In the 97-676 Docket, the Commission made clear that the enumerated criteria can be

18           supplemented to account for the unique facts and circumstances of each docket. These factors

19           are the beginning criteria to be used when evaluating a merger application, and are to be

20           supplemented by any other considerations that are relevant given the circumstances existing

21           at the time of the merger proposal. In essence, the question is whether the public interest is

1 served by approving the merger as determined by the specific facts and circumstances of each  
2 case. Mr. Ives provides in his testimony an overview as to how the Joint Applicants believe  
3 the proposed transaction meets these merger standards.

4  
5 **A. Effect on Consumers**

6 **1. Effect on Consumers - Financial Condition**

7 **Q. Please discuss the first merger standard, concerning the effect on consumers and the**  
8 **effect that the proposed transaction will have on the financial condition of the**  
9 **combined entity as compared to the financial condition of GPE and Westar as stand-**  
10 **alone entities.**

11 **A.** A basic fact of the proposed transaction is that GPE is paying Westar shareholders  
12 approximately \$2.30 for every \$1.00 of assets being acquired, and much of that is being  
13 financed with debt. In addition, the overall transaction value of \$12.2 billion includes the  
14 assumption of \$3.6 million of Westar debt as well as issuance of new debt of \$4.4 billion to  
15 finance a large portion of the cash payment to Westar shareholders. Both Standard and  
16 Poor's and Moody's Investor Service have expressed concerns regarding the use of leverage  
17 to finance this transaction. While both rating agencies contend that it is possible for GPE to  
18 maintain its current credit ratings, both rating agencies also expressed concerns about the thin  
19 margin for error that would result from the proposed transaction. The proposed transaction  
20 would put GPE right on the edge of the ability to meet the criteria used by the credit rating  
21 agencies for an investment grade rating.

1           In spite of this fundamental change in the capital structure of the consolidated entity,  
2           the Joint Applicants propose that the KCC continue to set rates as if utility operations are  
3           being financed with their current capital structures. Mr. Bryant discusses GPE’s capital  
4           structure at page 18 of his testimony, where he indicates that the company will become more  
5           leveraged due to the \$4.4 billion of new debt to be issued. Specifically it will move from  
6           approximately 50% equity to only 41% equity. However, Mr. Bryant goes on to state at page  
7           19 of his testimony that “The Transaction will have little, if any, effect on the utility  
8           companies’ respective capital structures. Following the Transaction, KCP&L and Westar will  
9           each maintain a capital structure consistent with past experience, targeted to be in the range  
10          of 49% - 54% equity dependent upon capital requirements, financing needs and timing.”  
11          Thus, while GPE states that it will not seek to recover the acquisition premium from  
12          ratepayers, that is exactly what it is doing by proposing that the KCC ignore the highly  
13          leveraged consolidated capital structure that will result from the proposed transaction.

14           For illustrative purposes, assume that the Westar and KCP&L have a combined  
15          Kansas-jurisdictional rate base of \$7 billion. Assuming debt costs of 5.5% and equity costs  
16          of 9.0%, the difference between a capital structure of 50% long-term debt and a capital  
17          structure of 59% long-term debt is almost \$60 million annually in higher rates that would be  
18          paid by Kansas jurisdictional ratepayers. Moreover, this differential will increase over time,  
19          as the rate base of each company grows. This differential will also increase if capital costs  
20          increase in the future. Thus, while the Joint Applicants contend that ratepayers would not  
21          finance the acquisition premium being paid in this case, in fact ratepayers would be indirectly

1 paying these costs.

2 In addition to the potential cost to ratepayers, the proposed transaction will also  
3 impact the financial condition of GPE shareholders, and perhaps not in a positive way. Mr.  
4 Bryant indicates at page 19 that the Transaction is expected to be neutral to GPE's forecast  
5 earnings per share in the first full year following the closing (2018) but will increase  
6 approximately 10% by 2020, or by approximately \$0.20 per share, compared to GPE as a  
7 stand-alone entity. Mr. Bryant's testimony is no longer accurate, as is discussed more fully  
8 below, due to the fact that the September 27, 2016 issuance of common equity occurred at a  
9 lower price than planned and resulted in the issuance of significantly more shares of GPE  
10 stock and other changes in the financial model. But even if shareholders did receive \$0.20  
11 per share in higher annual earnings, it would still take more than 97 years to recover the \$4.8  
12 billion of goodwill that will result from this transaction.<sup>24</sup>

13  
14 **Q. How will GPE meet the additional cash flow needs to service its higher debt financings  
15 after the closing?**

16 **A.** The additional \$4.4 billion of new long-term debt in the capital structure is expected to  
17 require an incremental \$170 million of annual interest expense, per Mr. Bryant at page 15 of  
18 his testimony. Mr. Bryant also indicates that the additional stock issuances by GPE will  
19 increase its dividends payable by \$110 million, but that is offset by the \$225 million of  
20 dividends that Westar will no longer be paying its public shareholders, for a net reduction in

---

24 Assuming 247.4 million total shares, as estimated on page 152 of the Proxy Statement, it would take 97.35 years. Given that more shares than anticipated were issued, the time to recover the goodwill would be even longer.

1 common dividends of \$115 million. This savings in common dividends is itself almost  
2 exactly offset by the dividends payable on the mandatory preferred stock to be issued by  
3 GPE, which will require an annual payment of \$115 million, resulting in a neutral impact of  
4 the merger transaction on dividends paid. After three years, at which time the preferred stock  
5 issued will convert to common stock, the Joint Applicants expected to have \$50 million less  
6 in dividends than the two companies would have had as stand-alone entities. However, this  
7 savings estimate is now lower by about \$14 million per year, due to the additional shares that  
8 were issued.<sup>25</sup> Therefore in the first three years after the closing of the Transaction,  
9 dividends will increase on a net basis by about \$14 million instead of holding flat. Moreover,  
10 the net savings of \$50 million originally expected in dividends after the preferred stock is  
11 converted to common will also be reduced by \$14 million for a projected reduction in total  
12 dividend payments of only \$36 million.

13 Mr. Bryant indicates beginning on page 16 of his testimony that the Joint Applicants  
14 are expecting \$65-200 million of additional cash flow from the operations of its utility  
15 companies due to savings from the transaction, while acknowledging that these savings are  
16 only available to GPE between rate cases, as the savings will flow to customers in each  
17 future rate review. GPE can also rely on its approximately \$400 million of net operating loss  
18 carry-forwards, which are sufficient for GPE to avoid the payment of cash income taxes until  
19 2022, thereby increasing the cash flow from the operations of its utility companies.<sup>26</sup>

---

20  
25 As can be determined by comparing the financial results in Tab C Merger Entries in the models provided in CURB-42 and later updated for the actual stock issuances at KCC-169.

1 **Q. Has the company provided a financial model that demonstrates that the terms of the**  
2 **proposed merger transaction are financially sound?**

3 **A.** The Company provided a financial model in response to CURB-42 that incorporates the  
4 terms of the proposed transaction and the Joint Applicants' estimated merger savings  
5 assumptions. However, the model is of rather limited usefulness in that it is based only on a  
6 three-year time horizon from 2018-2020, and it does not address how GPE will repay the  
7 principal on its anticipated \$4.4 billion of newly issued debt. The financial model was  
8 subsequently updated in the response to KCC-169.

9  
10 **Q. Does the updated financial model for the transaction, provided in response to KCC-**  
11 **169, address your concerns regarding the ability of GPE to service its debt?**

12 **A.** Regretfully, I must say that the updated financial model does not allay my concerns. The  
13 planning horizon for the model is still just the three year period, 2018-2020. I would have  
14 expected a longer time horizon to be examined, e.g. a horizon of at least ten years after  
15 closing of the transaction. I am especially concerned that the current model does not include  
16 any principal repayment on the \$4.4 billion of new debt. The response to CURB-137 states  
17 "The financial model does not break out each specific bond issue date, amount, interest rate  
18 or interest and principal payment. The financial model also does not include any projections  
19 beyond the year 2020. For simplicity, the model assumes all bond issues occur on December  
20 31, 2017, with a total issuance amount of \$4,375 million, an average interest rate of 3.95%,

1 an average tenure of 7 years, interest payments of approximately \$174M per year from 2018  
2 through 2020 and no principal payments prior to December 31, 2020.” Therefore, GPE has  
3 not provided any model demonstrating the impact of repaying \$4.4 billion of new debt.  
4 Moreover, if the Company does not have a plan to pay off this debt, the debt would  
5 presumably need to be refinanced in future years, which could result in higher interest  
6 payments as well as additional fees and issuance costs. The KCC should be very concerned  
7 that GPE is proposing to take on \$4.4 billion of new debt, for which it has provided no  
8 repayment plan. This is especially troubling, given the very thin margin of error on which  
9 GPE has justified the preservation of its credit ratings.

10  
11 **Q. Did you ask the Company how it intended to meet its repayment obligations for \$4.4**  
12 **billion in new debt?**

13 **A.** Yes, we did. In response to CURB-137(c), which requested more specificity concerning the  
14 repayment of \$4.4 billion in long-term principal, the Company responded,

15 The model assumes no principal payments to be made prior to December 31,  
16 2020. The timing, tenure and rate of debt issuances remain uncertain and are  
17 subject to changing market conditions. Any cash flow requirements to meet  
18 principal payments would be sourced from (a) operating cash flows through  
19 potentially improved earnings, improvements in working capital, or general  
20 changes in other operating activities; (b) positive variances versus capital  
21 expenditure projections; (c) re-financings of long term debt maturities;  
22 and/or (d) temporary utilization of short term revolvers.

23  
24 All of these sources of possible cash to meet principal repayments, except for the use of  
25 revolvers or refinancing, have already been captured in the updated financial model at the

1 levels GPE was comfortable putting forth in its analysis of merger savings. For those same  
2 sources to now stretch further to help fund principal repayments starts to sound unrealistic –  
3 especially considering that the interest rate assumptions could prove optimistic. In any event,  
4 it appears that principal repayments will significantly strain an already marginal financial  
5 scenario and I cannot help but wonder if that is one reason that the time horizon for the  
6 financial analysis did not extend beyond 2020.

7  
8 **Q. How will GPE’s issuance of an additional \$4.4 billion of debt affect the credit ratings of**  
9 **the Joint Applicants?**

10 **A.** Mr. Bryant indicates at page 21 of his testimony that the credit ratings of all of the Joint  
11 Applicants, GPE, KCP&L and Westar, are rated BBB+ by Standard and Poor’s (“S&P”).  
12 That rating is two notches above a non-investment grade rating. S&P affirmed its BBB+  
13 rating but gave each of the Joint Applicants a negative outlook after the agreement was  
14 announced. Moody’s Investor Services (“Moody’s”) rates KCP&L and Westar Baa1, also  
15 two notches above a non-investment grade rating, but rates GPE’s Senior Unsecured debt as  
16 Baa2, still investment grade but lower than the utilities’ ratings. After the announcement of  
17 the agreement, Moody’s affirmed the utility ratings with a stable outlook, but put GPE on  
18 review for a downgrade to Baa3, the lowest investment grade rating.

1 **Q. Are the regulated utility subsidiaries protected from a negative credit event at the GPE**  
2  **Holding Company level?**

3 **A.** I do not believe that they are. Despite the fact that the \$4.4 billion of debt will be issued at  
4 the holding company level, and that no debt will be issued, guaranteed or have any recourse  
5 to any utility subsidiary, as stated on page 10 of Mr. Bryant’s testimony, I am concerned  
6 about the risk of “contagion” for the utility subsidiaries. Moody’s indicates at page 4 of its  
7 Rating Assessment that,

8 Lastly, it is possible that the credit ratings for Westar, KCPL and GMO could  
9 be constrained or negatively impacted going forward. While no change to  
10 utility ratings would likely occur at close of transaction, the high amount of  
11 family leverage would begin to weigh on upward ratings mobility of the  
12 subsidiaries, due to the contagion risk at the parent level and increased need  
13 for upstream dividend support. Scenario 4 and 5 leverage would weaken the  
14 positioning of Westar, KCPL and GMO within their respective ratings  
15 categories.<sup>27</sup>

16  
17 I note that the Scenario 4 and 5 referred to by Moody’s address new long-term debt issuances  
18 of \$4.3-\$4.6 billion respectively, which is the range for the debt proposed in this transaction  
19 of \$4.4 billion. I also note, per page 3 of the Moody’s Rating Assessment, that while Westar  
20 and KCPL currently have a rating of Baa1, GMO only has a rating of Baa2, and therefore  
21 GMO is currently rated only one notch above the investment grade threshold of Baa3.

22  
23 **Q. What effect would a reduction in the credit ratings of the utilities have upon**  
24  **ratepayers?**

25 **A.** The cost of debt will increase as the credit ratings decrease. An increase in the cost of debt

1 will be reflected in a higher cost of capital applied to the rate base, thereby increasing the  
2 revenue requirement and driving up rates to consumers.

3  
4 **Q. Are there other aspects of Moody's Rating Assessment that concern you?**

5 **A.** Yes, there are. I note that on page 4 of the Moody's Rating Assessment, Moody's indicates  
6 that "40% holding company debt, as a percentage of consolidated debt, often results in three  
7 rating notches between the parent company rating and its principal operating subsidiaries."  
8 The same page of the Rating Assessment shows that the contemplated issuance of \$4.4  
9 billion of debt will put GPE's percentage of consolidated debt at 36%-37% (up enormously  
10 from its current 2% consolidated debt share), and results in a 94% - 95% ratio of total debt to  
11 total rate base. The Moody's Rating Assessment at page 3 indicates that under the debt  
12 scenario contained in the Joint Application, there is currently only one ratings notch  
13 separating GPE, already at the lowest investment grade rating of Baa3 under scenarios 4 and  
14 5, from GMO, and two notches separating it from Westar and KCPL. Clearly another notch  
15 downward would put all the ratings in some peril. Moody's further cautions at page 4 of its  
16 Ratings Assessment that "Scenarios 4 and 5 result in consolidated financial metrics reflect  
17 (sic) levels that are typically associated with a speculative grade financial profile in 2018  
18 under both scenarios."

19 Moody's added further caution in its Rating Assessment on page 5, stating,

20 These financial metrics result in a weakly positioned Baa3 holding company  
21 that has average consolidated regulatory support and unique exposure to a

---

27 Moody's Rating Assessment, provided in response to CURB-40, page 4.

1 single-unit nuclear facility. Average cash flow to debt metrics around 124%  
2 leave little room for error within the Great Plains forecast assumptions,  
3 including regulatory outcomes and economic factors (including interest rate  
4 levels) that are outside management control. The combination of these factors  
5 would expose Great Plains to a lower tolerance threshold for negative credit  
6 events, and a higher likelihood for downgrade in the face of adverse  
7 circumstance.  
8

9 The Assessment goes on to state on page 6,

10 While we understand the unique opportunity that Project Wizard provides,  
11 and funding strategy necessary to achieve the transformative transaction, we  
12 view the amount of acquisition debt in Scenarios 4 and 5 – that more than  
13 doubles Great Plains’ existing debt – as highly aggressive and evidence of  
14 financial engineering. Kansas and Missouri service territories are not high  
15 growth areas that will provide Great Plains with a clear path of paying down  
16 the acquisition debt, so we view the \$4.3 billion Scenario 4 debt and the \$4.6  
17 billion of Scenario 5 debt as permanent leverage in the Great Plains capital  
18 structure. This debt will be increasingly difficult to service in a rising interest  
19 rate environment and could pressure utility subsidiaries for additional  
20 upstream dividends in the future.  
21

22 **Q. What conclusions do you draw from Moody’s comments?**

23 **A.** I conclude that the magnitude of the proposed transaction leaves little or no room to add  
24 protections for ratepayers without jeopardizing the investment grade ratings of GPE and  
25 possibly its subsidiaries. Appendix A of the Moody’s assessment specifically mentions that  
26 its already sobering assessment is predicated on the fact that “No material customer credits,  
27 or rate freezes, are required as part of the KCC transaction approval” and “No ring-fencing  
28 type provisions are introduced that would significantly limit the upstream dividend  
29 capabilities of Westar or the Great Plains utilities.” In fact, it is clear that the proposed  
30 transaction, as currently structured, leaves GPE with a very small margin of error. Even if

1 all of the assumptions and projections made by the Joint Applicants were entirely accurate,  
2 the proposed transaction as currently structured is tenuous at best. Any negative event could  
3 have serious consequences to GPE. It is also disconcerting that the enormous \$4.4 billion of  
4 new debt is viewed by Moody's as likely to be a permanent addition to GPE's capital  
5 structure. This makes it even more likely that any increase in interest rates could jeopardize  
6 GPE's ability to service its debt.

7  
8 **Q. Is GPE requesting rate recovery of the acquisition premium of \$4.8 Billion from**  
9 **ratepayers?**

10 **A.** GPE originally did not ask for any rate recovery of the acquisition premium or recovery of  
11 the merger transaction costs incurred to develop and close the transaction.<sup>28</sup> However as  
12 discussed earlier, GPE now reserves the right to claim these expenses in rates if "any party to  
13 a general rate case of a GPE utility subsidiary proposes to impute the cost or proportion of  
14 debt GPE is using to finance the transaction to a GPE utility subsidiary for purposes of  
15 determining a fair and reasonable return for a GPE utility subsidiary. In that event, GPE and  
16 its utility subsidiaries reserve the right to seek, in any such rate case, recovery and  
17 recognition in retail rates of goodwill (or transaction costs) related to the Transaction."<sup>29</sup>

18 However there has always been a proposal to recover the estimated \$60 million in  
19 transition costs, to the extent they are expected to be offset by acquisition savings.<sup>30</sup> Mr. Ives  
20 indicates that KCP&L would not oppose an amortization of one-time transition costs over a

---

28 See page 12 of the Joint Application.

29 See the response to CURB 115 and the Supplemental Direct Testimony of Mr. Ives at page 12.

1 multi-year period, and recognizes such costs are generally subject by the Commission to  
2 “some degree of amortization.”<sup>31</sup> Mr. Ives discusses upcoming rate cases beginning at page  
3 25 of his testimony and indicates that both Westar and KCP&L will file an abbreviated rate  
4 case in 2016 (which have both now been filed) and that both expect to file an additional case  
5 in 2018, with the cut-off date for review in those filings expected to be the second or third  
6 quarters. After the 2018 base rate case filings, it is expected that transaction savings will  
7 allow a longer stay-out, with any increases in savings subsequent to the 2018 rate cases  
8 retained by GPE until such time as new rate cases are filed.

9  
10 **Q. Has the Company put forth a plan to recoup the \$4.8 billion goodwill adjustment that**  
11 **will result from the proposed transaction?**

12 **A.** No, it has not. The Joint Applicants have failed to put forth any plan for recovery of the  
13 acquisition premium. Nor have the Joint Applicants represented to shareholders that the  
14 goodwill will actually be recovered and if so, over what period of time. The Joint  
15 Applicants recommended that shareholders approve the proposed transaction, and  
16 shareholders of both GPE and Westar have approved the merger. But how, and if, goodwill  
17 is to be recovered has apparently been left to the speculation of shareholders. It appears that  
18 the Joint Applicants put forth the terms of the agreement to shareholders and then left the  
19 decision to them concerning the value of the proposed acquisition.

**Q. Why should the KCC be concerned about the failure of the Joint Applicants to address recovery of goodwill?**

**A.** The KCC should be concerned for several reasons. First, in order to maintain its earnings level, and in fact to provide the increase in earnings per share that has been projected, GPE will need to find financial benefits in addition to those identified by Mr. Kemp. This means that GPE may be motivated to make deeper cuts than those currently estimated. Therefore, in an effort to enhance earnings, the Joint Applicants may find it necessary to take steps that could have a direct and detrimental impact on the quality of electric service in Kansas. This could include reducing capital spending in the utilities, reducing maintenance programs, and other cost cutting measures, such as a reduction in support of charitable donations and other community programs, eventual closure of the Topeka headquarters facility, and other steps.

**Q. Are there other aspects of the proposed Transaction that result in increased risk for the combined entity?**

**A.** Yes there are. The proposed transaction will double GPE’s nuclear exposure as each utility currently holds a 47% stake in the Wolf Creek Nuclear Generating Station, and after the acquisition GPE will hold a 94% stake in that facility. Both the Joint Applicants’ investment advisors and the credit rating agencies have recognized the increased risks associated with single ownership of nuclear facilities. This risk could further jeopardize the ability of GPE to meet the financial benchmarks required by the rating agencies.

1           The Pro Forma Balance Sheet provided at page 143 of the Proxy Statement  
2 demonstrates that GPE’s existing long-term debt at the holding company level of \$3.5 billion  
3 will more than triple with the addition of \$4.4 billion in new debt that will be issued to  
4 partially fund the cash portion of the acquisition and the assumption of the Westar debt of  
5 \$3.6 billion. Mr. Bassham relies on assurances from the credit rating agencies that the  
6 transaction will allow GPE to maintain an investment grade credit rating for the holding  
7 company and its subsidiaries, but as discussed above the rating agencies acknowledge that  
8 the Joint Applicants’ projections provide little margin for error. As a result of the proposed  
9 transaction, GPE’s goodwill will increase from \$169 million as of June 30, 2016 to almost  
10 \$5.0 billion, in order to account for the premium paid to acquire Westar<sup>32</sup>.

11           GPE currently serves 850,000 electric customers through its subsidiaries and of that  
12 number approximately 250,000 are customers of KCP&L in Kansas.<sup>33</sup> The acquisition of  
13 Westar will add over 700,000 new Kansas customers to GPE, resulting in total customers of  
14 over 1.55 million – an increase of 82%. Mr. Bryant’s chart of Key Operating Metrics shown  
15 on page 4 of his testimony indicates that GPE’s rate base will more than double, growing  
16 from \$6.6 billion to \$13.7 billion. Its generation capacity will nearly double from 6,446 MW  
17 to 12,713 MW. Transmission miles will almost triple, from 3,600 miles to 9,900.  
18 Distribution miles will more than double from 22,500 to 51,300. Thus the acquisition of  
19 Westar will transform GPE into a much larger and more complex utility entity with a much  
20 more significant need for cash.

---

32 Proxy Statement, page 142.

33 Testimony of Mr. Bryant, page 3.

1 **Q. What are the costs of the acquisition that will be incurred by GPE?**

2 **A.** The costs of the acquisition include the acquisition premium, to be recorded as goodwill by  
3 GPE, of \$4.8 billion, as shown on page 151 of the Proxy Statement. The Joint Applicants  
4 also estimate transaction costs for advisory, legal, investment banking and professional  
5 services fees of \$80.4 million.<sup>34</sup> There are many other fees related to the new financings and  
6 change in control costs that are now estimated to bring total transaction and financing fees  
7 and costs to \$246 million. In addition, Mr. Kemp estimates transition costs of \$60 million  
8 over the first four years following the merger.<sup>35</sup> In addition, there are other future costs  
9 that have not yet been estimated by the Joint Applicants, such as costs for a common  
10 branding of utility operations.

11  
12 **Q. Please provide the details of the common and preferred stock that has already been**  
13 **issued by GPE.**

14 **A.** The original assumptions included in the financial model supporting the Joint Application  
15 assumed that \$1.5 billion of common equity would be issued to the public at a price of  
16 \$29.45 per share. The original model also assumed the issuance of \$1.6 billion of mandatory  
17 convertible preferred equity carrying a 7.25% interest rate, of which \$750 million is to be  
18 issued to OMERS at the time of closing and \$850 million of which was to be issued to the  
19 public. The response to interrogatory KCC-169 indicates that on September 27, 2016, GPE  
20 issued \$1.552 billion of common equity at \$26.45 per share, a lower price than planned. The

---

34 Proxy Statement, page 150.

35 Schedule WJK-3.

1 higher proceeds and lower price per share resulted in the issuance of approximately 8.0  
2 million additional common equity shares versus the amount originally estimated.<sup>36</sup>  
3 Mandatory convertible preferred equity was also issued on September 27, 2016 in the amount  
4 of \$863 million at a 7% versus 7.25% interest rate.

5  
6 **Q. Are you concerned that the Company issued 8 million more equity shares than was**  
7 **anticipated at the time that the Joint Application was filed?**

8 **A.** Yes, I am. The Company indicates in response to KCC-169 that the additional shares will  
9 have a “material” impact on earnings per share. The updated financial projections provided in  
10 response to KCC-169 indicate that there will be a 4% dilution in earnings per share in the  
11 first full year, instead of a neutral result as Mr. Bryant expected at the time the Joint  
12 Application was filed.<sup>37</sup> By 2020, the updated model projects that the proposed transaction  
13 will have a 4.3% accretive impact on earnings, and not the 10% accretion originally forecast  
14 and discussed in Mr. Bryant’s testimony. In addition, the increase in dividends that will be  
15 required to support the additional common shares of equity will divert cash that could have  
16 been applied to the retirement of long-term debt.

17 The response to KCC-169 indicates that the financial model assumes that dividends  
18 on common stock grow from \$1.25 per share to \$1.41 per share over the three year planning  
19 horizon, from 2018-2020. Assuming an average dividend rate of \$1.33 per share, dividend  
20 payments would increase by \$10.6 million per year, for a total additional cash flow

---

36 (See the attachments in responses to CURB 42 and KCC-169, “Dashboard” tab at page 11, showing 52.5 million and 60.5 million shares issued to the public respectively.)

1 requirement of approximately \$32 million. In ordinary times, such an amount would not be  
2 material to GPE. However, Moody's has already stated that it is concerned with the degree  
3 of leverage in the proposed transaction and states at pages 3-4 of its Rating Assessment that  
4 "...Great Plains would be weakly rated in the Baa3 category, with no cushion to absorb a  
5 negative credit event." The Baa3 rating that Moody's assigns to GPE based on the proposed  
6 transaction, with the issuance of \$4.3-\$4.6 billion of new long-term debt, is already the  
7 lowest investment grade rating. The Proxy Statement indicates at page 60 that a special board  
8 meeting was held on May 18 2016, to discuss, among other things, the impact of the  
9 proposed merger on its credit ratings, so presumably the Moody's Rating Assessment was  
10 available to GPE as of that date. Five days after the special board meeting, GPE submitted a  
11 proposal to Westar based on a price of \$58.25 per share with 85% in cash, but the board also  
12 authorized management to offer additional consideration of up to \$60 per share with 90%  
13 cash.

14 I am concerned that the proposed transaction has no margin to absorb any negative  
15 events before GPE could lose its investment grade rating, and in that context the decrease in  
16 projected earnings per share (which the Company agrees is material), coupled with the need  
17 for an additional \$10.6 million a year to provide dividends on new common equity is not  
18 helpful. The Moody's Ratings Assessment makes this alarmingly clear with the statement at  
19 page 4, "For example, if financial performance were to underperform forecast assumptions  
20 for any reason, or the degree of regulatory support offered by Kansas, Missouri or the FERC

1           were to deteriorate slightly, it is highly likely that a negative rating action for Great Plains  
2           would follow (e.g., negative ratings outlook, review for a downgrade or downgrade.)” The  
3           Assessment goes on to state “We would also incorporate a qualitative view that the financial  
4           policies of Great Plains management and board of directors have become decidedly more  
5           tolerant of risk – a credit negative and a deviation from what we have incorporated into our  
6           ratings, historically.”

7  
8       **Q.    Please summarize your conclusion regarding the first merger standard concerning the**  
9       **consumer impact associated with the financial condition of the newly created entity as**  
10      **compared to the financial condition of the stand-alone entities if the transaction did not**  
11      **occur.**

12      **A.**    As discussed above, the new combined entity will be in a much weaker financial condition  
13      after the transaction than either GPE or Westar would be on a stand-alone basis. It is also  
14      clear that the Board of Directors and GPE management knew about credit rating agency risk  
15      when they authorized this transaction, although there has been a further deterioration in  
16      projected earnings and an increase in cash requirements since the Proxy Statement was  
17      issued. While the proposed merger terms are structured to offer some protections to the  
18      utility subsidiaries from the financial risk of the transaction, such as issuing all the debt at the  
19      GPE holding company level, it is clear from the Moody’s Rating Assessment that it is not  
20      possible to shield the regulated utilities from a transaction of this size. Indeed, S&P  
21      predicated its Ratings Evaluation upon an assumption that “Regulatory approvals do not

1 impose financial burdens such as rate freezes or large refunds or insulate any of the  
2 subsidiaries.”<sup>38</sup> S&P also assumed that “there are no meaningful insulation measures in  
3 place that protect KCP&L and GMO from their parent...”<sup>39</sup> There is simply no margin of  
4 error and no room left to add ratepayer protections without jeopardizing the investment grade  
5 ratings that are currently enjoyed and narrowly projected to be maintained by the parties. The  
6 Commission cannot simply ignore the serious financial risk to ratepayers that could result  
7 from this transaction.

8  
9 **2. Effect on Consumers - Reasonableness of the Purchase Price**

10 **Q. Please discuss the second consumer merger consideration listed in the KCC’s Order On**  
11 **Merger Standards concerning the reasonableness of the purchase price, including**  
12 **whether the purchase price was reasonable in light of the savings that can be**  
13 **demonstrated from the merger and whether the purchase price is within a reasonable**  
14 **range.**

15 **A.** Mr. Bryant argues, beginning at page 7 of his direct testimony that the purchase price is  
16 reasonable based on four factors: 1) the price was a result of a competitive bidding process,  
17 2) savings from the merger will be substantial, ranging from \$65 million in the first year  
18 following the merger and growing to \$200 million per year, 3) the price and premium paid  
19 for Westar is comparable to similar market transactions and 4) the credit ratings are expected  
20 to remain at investment grade for GPE following the transaction.

---

38 S&P Rating Evaluation, May 9, 2016, page 5.

39 Id, page 4.

1           The purchase price can be evaluated against several benchmarks. For example, the  
2           price paid per share of Westar stock can be evaluated relative to the stock price prior to the  
3           transaction becoming public knowledge. In this regard, Mr. Bryant calculates an acquisition  
4           premium of approximately \$2.3 billion, or 36%, on the undisturbed Westar stock price of  
5           \$44.08 on March 9, 2016, which was the closing price on the day prior to news of a potential  
6           transaction leaking to the public.<sup>40</sup> That may be a reasonable basis upon which to compare  
7           market prices, but I believe it is more appropriate to examine the purchase price in light of  
8           the amount of goodwill that will result from the transaction. Given that the acquisition is of  
9           regulated utility assets in rate base and prospective cash flows are necessarily tied to a return  
10          on such assets, the KCC should focus instead on the \$4.8 billion goodwill adjustment that  
11          would result from the acquisition, as outlined on page 151 of the Proxy Statement. In  
12          addition the Merger Standards explicitly require a comparison of the acquisition premium to  
13          book value, per Section 5(a)(iv) of the KCC's Order on Merger Standards.

14          Mr. Bryant's four arguments do not demonstrate that the purchase price is reasonable  
15          in light of the savings that can be demonstrated from the merger. Regarding his first  
16          argument the fact that the price resulted from a competitive bidding process supports the fact  
17          that the price is based on an arms-length transaction, but it does not necessarily directly  
18          support the reasonableness of the final price that was agreed upon. According to the history  
19          of the transaction discussed in the Proxy Statement, GPE already had made an offer of  
20          \$58.25 per share, with 85% payable in cash, that was superior to any other party's bid when it

---

40 Testimony of Mr. Bryant, page 11.

1 was encouraged to improve upon its offer in the final round.<sup>41</sup> At that time, the second  
2 bidder had offered a price between \$54 and \$56 per share with only 45% paid in cash.  
3 Ultimately, GPE's bid of \$60 per share, 85% of which was payable in cash, with 15% in GPE  
4 common stock, and with a collar mechanism to protect the value of GPE stock for the benefit  
5 of Westar shareholders, was significantly better than that offered by the other active  
6 remaining bidder, identified as Bidder D in the prospectus. Bidder D proposed a price of \$56  
7 per share, with just \$25 or 45% of that price payable in cash. I understand that GPE likely  
8 perceived a greater value in its merger prospects than did other bidders, given its service area  
9 is contiguous with the Westar service area, but in the end, it offered a price that has left very  
10 little room for error on its part, as discussed earlier in my testimony.

11 Secondly, Mr. Bryant also argues that the projected merger savings of \$65 million,  
12 growing to \$200 million annually after 3 full years, justify the acquisition premium of \$2.3  
13 billion mentioned above. Mr. Bryant's analysis is flawed in that it is comparing the  
14 acquisition premium based on stock market values to savings that will flow through the  
15 ratemaking equation based on actual costs. Moreover, in KCC Docket No. 97-WSRE-676-  
16 MER ("97-676 Docket"), the KCC examined a ten year forecast of savings, which in this  
17 case would be approximately \$1.2 billion on a net present value basis,<sup>42</sup> or about half of the  
18 premium of \$2.3 billion based on the undisturbed stock price as suggested by Mr. Bryant.  
19 But if the KCC compares the purchase price instead to the acquisition premium based on  
20 goodwill of \$4.8 billion, even fifty years of savings is not sufficient to offset the acquisition

---

41 Proxy Statement, page 61.

42 Assuming the 2.4% inflation rate and 7.5% discount rate used by Mr. Bryant.

1 premium.<sup>43</sup>

2 The third argument made by Mr. Bryant is that the purchase price is in line with  
3 premiums that have been paid in similar acquisitions. While that may be the case, it does not  
4 mean that the transaction itself is affordable for GPE. A larger utility company may be able  
5 to more readily absorb an acquisition adjustment resulting in \$4.8 billion of goodwill. Or  
6 another company may be able to finance an acquisition with more equity and/or in a way that  
7 requires a smaller cash outlay. The problem in this transaction is not only the purchase  
8 price, but the fact that this purchase will result in such a large increase to GPE's long-term  
9 debt.

10 The fourth claim, that the holding company and its subsidiaries will maintain  
11 investment grade ratings, has already been discussed at length above and shown to be a very  
12 tenuous claim.

13  
14 **Q. What is your conclusion regarding the reasonableness of the purchase price?**

15 **A.** While the purchase price may appear reasonable compared to other market-based  
16 transactions, and while there are compelling reasons why these two companies fit well  
17 together, the absolute purchase price is simply too rich for an acquirer of the size of GPE.  
18 There is a considerable amount of downside risk to the estimated savings and cash flows, and  
19 any underperformance, as discussed in the Moody's Rating Assessment, could negatively  
20 impact both the holding company and its subsidiaries. A credit rating downgrade of utility

---

43 Assuming the 2.4% inflation rate and 7.5% discount rate, 50 years of savings would have a net present value of \$3.036 billion.

1 subsidiaries will increase the cost of capital and thereby increase costs borne by the  
2 ratepayers. I understand that ratepayers are currently not being asked explicitly to pay for any  
3 portion of the acquisition premium, but the sheer size of the premium gives me pause, as  
4 discussed earlier in my testimony. Therefore, given the speculative nature of future savings  
5 and the possibility that adverse events will occur, I cannot conclude that the purchase price  
6 agreed to by GPE is reasonable from a consumer point of view.

7  
8 **3. Effect on Consumers - Quantification of Ratepayer Benefits**

9 **Q. Please discuss the Merger Standard concerning whether ratepayer benefits resulting**  
10 **from the transaction can be quantified.**

11 **A.** I did have an opportunity, along with Staff, to discuss the methodology used by GPE to  
12 estimate merger savings, to review the assumptions used to develop merger savings, and to  
13 trace how those savings were included in the financial planning models provided in response  
14 to CURB-42 and updated in KCC-169. I have concerns, as I perceive Staff may also have,  
15 regarding the speculative nature of the cost savings, such as the lack of planning for the  
16 staffing of the Topeka office and the overhead cost allocation savings. I remain concerned  
17 that the timing of the savings may prove overly ambitious and I am also concerned that  
18 complications could arise that would tend to increase, rather than decrease, costs in the  
19 period immediately following the closing. However, on balance, I am persuaded that the  
20 Company's testimony and financial modeling of savings estimates are reasonably quantified  
21 – if still subject to risk of achievement - at this point in the merger process.

1           **4.       Effect on Consumers - Operational Synergies That Justify A Premium**

2       **Q.       Please comment on the Merger Standard concerning the effect on consumers of**  
3       **whether there are operational synergies that justify payment of a premium in excess of**  
4       **book value.**

5       **A.**     I do not believe that there are operational synergies that would justify the level of the  
6       premium proposed to be paid by GPE for Westar in this case. Not only are these savings  
7       insufficient to justify the expected premium recorded as goodwill, but GPE has failed to  
8       demonstrate how its new long-term debt will be repaid. In addition, the purchase price and  
9       associated financing requirements provide insufficient cushion with regard to credit ratings.

10           In addition, in his Supplemental Direct Testimony, Mr. Bryant implies that since GPE  
11       is not explicitly requesting recovery of the acquisition premium from ratepayers, then the  
12       acquisition premium is justified even if only \$1.00 of savings flows to ratepayers. I disagree,  
13       for several reasons. First, Mr. Bryant states that GPE will not attempt to recover the  
14       acquisition premium from ratepayers unless any party recommends the use of a consolidated  
15       capital structure for ratemaking purposes, but under the Joint Applicants' proposal,  
16       ratepayers would be implicitly paying for the acquisition premium through rates that reflect a  
17       capital structure that is not representative of how actual utility operations are being financed.  
18       Second, Mr. Bryant ignores the fact that a high acquisition premium, even if it is not  
19       recovered from ratepayers, could still jeopardize the credit ratings and financial integrity of  
20       the consolidated entity, especially if it is being financed with significant amounts of new  
21       long-term debt that will become a permanent part of the consolidated capital structure.

1 Third, since the Joint Applicants have not indicated how they expect to pay down the  
2 principal on the new long-term debt, it will likely need to be refinanced into new issuances,  
3 leaving the consolidated entity exposed to the risk of rising interest rates, which would  
4 further destabilize the combined entity that is already projected to be at the lower limits of  
5 investment grade credit ratings. Fourth, Mr. Bryant ignores the fact that pressure to meet  
6 debt service and/or to deliver enhanced earnings for shareholders could require the utilities to  
7 cut costs to such an extent that service quality and safety are affected.

8 Since Westar and KCP&L are utilities that are regulated on a cost-of-service basis,  
9 and since net book value is the standard by which rate base is calculated, then theoretically  
10 purchasers of utility companies should not be willing to pay significantly more than book  
11 value for the assets they acquire. That is especially true when the entity being acquired does  
12 not have substantial non-regulated operations. Given the fact that the overwhelming majority  
13 of the consolidated entity's operations will be regulated and the fact that the utilities will  
14 provide the majority of revenue supporting the consolidated entity, it is not only reasonable  
15 but also necessary to assess the magnitude of the acquisition premium in light of the utilities'  
16 net book values.

17  
18 **Q. Can you comment on Mr. Bryant's Supplemental Testimony and the net present value**  
19 **of synergy savings he calculates at page 6 of that testimony?**

20 **A.** Mr. Bryant's Supplemental Testimony explicitly addresses the net present value of the stream  
21 of estimated savings put forth by the company for the three year period 2018-2020. The

1 savings are estimated to grow from \$63 million in year 1 to \$199 million per Table 1 of Mr.  
2 Bryant's Supplemental Testimony at page 6. After 2020, the company assumes that the  
3 savings stream would continue to grow with inflation, at a rate assumed to be 2.4%. Mr.  
4 Bryant then calculates the value of the inflation-driven savings in perpetuity, based on a  
5 discount rate of 7.5%, which reflects the weighted average cost of capital for ratemaking  
6 purposes. He makes this calculation by dividing the \$199 million future stream of savings  
7 by 5.1%, which is the difference between the inflation rate and the discount rate, to arrive at a  
8 net present value of \$3.9 billion of savings. To this figure he adds back the present value of  
9 the savings over the first three years which he calculates to be \$364 million, for a total net  
10 present value of savings of \$4.26 billion, as shown in Table 1 to Mr. Bryant's Supplemental  
11 Testimony.

12  
13 **Q. Do you agree with Mr. Bryant's calculation of \$4.26 billion as the net present value of**  
14 **savings for ratemaking purposes?**

15 **A.** No, I do not. First, I should point out that while \$4.26 billion is an impressive number, it still  
16 falls short of the acquisition premium over book value of \$4.9 billion, referenced by Mr.  
17 Bryant at page 8 of his Supplemental Testimony. But more importantly, I do not agree with  
18 Mr. Bryant's use of an infinite time horizon to assess the value of a utility company's  
19 savings. To do so significantly overstates its value to any living person. In addition, the  
20 accuracy of any savings estimate diminishes the further out one goes in the future, and  
21 certainly an estimate based on perpetuity has a significant margin of error. I note that the

1 Commission used a ten year planning horizon to assess the value of merger savings in the  
2 prior KCC Docket No. 97-WSRE-676-MER. Based on a ten-year period, the resulting net  
3 present value of merger savings is only \$1.2 billion, far short of the \$4.9 billion acquisition  
4 premium referenced by Mr. Bryant. Moreover, this \$1.2 billion is based on 100% of the  
5 savings, so the net present value would be even smaller if the KCC elected to allocate merger  
6 savings between ratepayers and shareholders.

7 Therefore, while I understand that the Company does not expect to charge ratepayers  
8 for any portion of the acquisition premium, it is not possible for me to conclude that the  
9 synergies justify the size of this large acquisition premium.

10  
11 **5. Effect on Consumers - Existing Competition**

12 **Q. Please discuss the Merger Standard concerning the effect of the proposed transaction**  
13 **on the existing competition.**

14 **A.** On page 10 of his Supplemental Testimony, Mr. Ives states that the proposed transaction  
15 does not affect the service areas of the utility subsidiaries, and therefore it will not have any  
16 effect on competition. In spite of the fact that there is currently no competition for regulated  
17 electric service, the proposed transaction will still eliminate one significant entity in the  
18 electric industry. This is a significant period for the electric industry, as new technologies  
19 evolve, resulting in new sources of renewable power, increased distributed generation, and  
20 other technological changes. Therefore, while I tend to agree with Mr. Ives that there will be  
21 virtually no short-term impact on competition, the elimination of one large player in the field

1 could impact the progress of future technological development and implementation of new  
2 power sources. More importantly, the merger will eliminate one independent entity from the  
3 industry, an entity that has the potential to examine issues with a different perspective from  
4 GPE.

5  
6 **B. Effect on the Environment**

7 **Q. Please discuss the next merger standard, which is the effect of the transaction on the**  
8 **environment.**

9 **A.** The proposed transaction could have a slightly positive impact on the environment. The  
10 Joint Applicants have assumed that certain coal generating units would be retired earlier than  
11 currently anticipated if the proposed transaction is approved. In addition, the transaction  
12 could result in synergies regarding reserve margins that would result in the need for less  
13 generation, thereby benefiting the environment. If the transaction results in early retirement  
14 of coal generation, then the impact on the environment could be positive.

15 However, the overall impact on ratepayers of early retirement of coal generation  
16 would also depend upon the ratemaking implications of the retirements. For example, the  
17 Joint Applicants could request recovery of stranded costs, resulting in ratepayers being  
18 required to continue to pay for generation facilities that are no longer providing utility  
19 service. In that case, the retirements could have a positive impact on the environment, but  
20 still result in a financial detriment to ratepayers.

21

1 **Q. Are there other ways in which the proposed transaction could impact the environment?**

2 **A.** Yes, the proposed transaction could negatively impact the environment if it resulted in rate  
3 structures that promoted increased energy consumption. Therefore, the KCC should consider  
4 the different rate structures of the Joint Applicants and the possibility that eventual rate  
5 consolidation could result in less efficient rate structures.

6  
7 **Q. Can you summarize the differences between the current Westar and KCP&L**  
8 **residential general use rate structures?**

9 **A.** Yes, Westar’s residential general (or standard) use rate schedule contains a customer charge,  
10 a declining-block winter energy charge, and an inclining-block summer energy charge. In the  
11 winter, the energy charge is lower for all usage in excess of 900 kWh per month. In the  
12 summer, the energy charge is higher for all usage in excess of 900 kWh per month.  
13 KCP&L’s current residential general use (or RES-A) rate schedule contains a customer  
14 charge and a flat rate energy charge, which is seasonally differentiated (*i.e.*, higher in the  
15 summer than in the winter).

16 Therefore, Westar’s inclining-block energy charge provides a strong price signal to all  
17 residential customers to conserve electricity in the summer months, which is Westar’s peak  
18 season. By conserving electricity, residential customers exercise greater control over their  
19 electric bills, and benefit directly from the resulting reduction in their utility bills. At the  
20 same time, however, greater conservation can contribute towards a delay in the need to build  
21 expensive new generating plant, which benefits *all* ratepayers. Obviously, the conservation-

1 oriented price signal inherent in Westar’s inclining-block rate design is absent from  
2 KCP&L’s residential rate structure. I understand that CURB has supported Westar’s existing  
3 inclining-block rate structure in past Westar rate proceedings. It is also my understanding  
4 that KCP&L has consistently opposed the adoption of an inclining-block rate structure for  
5 residential customers.

6  
7 **Q. Has KCP&L made any commitment to retain Westar’s inclining-block rate structure in**  
8 **the event the proposed transaction is approved?**

9 **A.** No, it has not. Absent such a commitment, it is reasonable to conclude that KCP&L could  
10 seek to eliminate Westar’s inclining-block rate design in a future rate proceeding, based on  
11 KCP&L’s past opposition to implementing a similar inclining-block rate design for its  
12 residential customers. The Joint Applicants have stated that the long-term plan is to move  
13 toward common branding of utility operations and a common rate structure. Elimination of  
14 Westar’s inclining block structure could have a detrimental impact on the environment if it  
15 results in increased consumption per customer and increases generation requirements.

16  
17 **C. Effect on State and Local Economies**

18 **Q. Will the proposed transaction be beneficial on an overall basis to state and local**  
19 **economies and to communities in the area served by the resulting public utility**  
20 **operations in the state?**

21 **A.** There are both benefits and detriments to the overall state and local economies. To the

1 extent that the proposed transaction results in synergy savings, and lower utility rates, then  
2 there would be a potential benefit to the state and local economies. Lower electric rates  
3 would result in customers having more disposable income to spend on other items. This in  
4 turn would help the local and state economies as residents use these funds for purchases other  
5 than electricity. In addition, lower rates would make Kansas and the Westar/KCP&L service  
6 territories more competitive, potentially resulting in the location of new businesses and/or the  
7 relocation of existing businesses, although the relocation of existing businesses within  
8 Kansas would not have a net benefit to the state. Therefore, one would expect that a  
9 transaction resulting in lower electric rates would provide a benefit to the state and local  
10 economies, all other things being equal.

11 However, any such benefit would be offset by the negative economic impact of job  
12 losses, as discussed below. In addition, the proposed transaction could result in deterioration  
13 of service, as GPE strives to meet earnings objectives while financing the debt service  
14 resulting from the proposed acquisition. If service reliability does deteriorate, then any  
15 benefits accruing from lower electric rates could be offset by increased costs resulting from  
16 service outages and other disruptions. In addition, service degradation could make  
17 businesses hesitate to relocate to the Joint Applicants' service territory or to expand existing  
18 businesses.

19 In summary, the proposed transaction could bring both benefits and detriments to the  
20 state and local economies. At this time, it is difficult to say whether there would be net  
21 benefits to the state and local economies as a result of the transaction.

21

**Q. Will the proposed transaction likely create labor dislocations that may be particularly harmful to local communities, or the state generally, and are there measures that can be taken to mitigate the harm?**

**A.** Once again, the issue of labor dislocations is a difficult one. There will certainly be positions eliminated as a result of the proposed transaction. While one hopes that utilities would not retain positions that are not actually needed, the KCC must recognize that all losses of employee positions do create hardships. According to the Joint Applicants, the expectation is that the proposed transaction will result in the loss of 638 full-time equivalent employees. The hope is that many of these positions will be eliminated through attrition rather than employee layoffs. While the use of attrition is certainly preferred to layoffs, a reduction in employee positions that is brought about by any means will result in an overall loss to the state and local economies, all other things being equal. Thus, the loss of employee positions could be detrimental to the economy, even if there are no layoffs. Moreover, even one employee layoff is certainly detrimental to the individual employee that is being terminated. This detriment would need to be weighed against the benefits of lower electric prices that resulted from the elimination of these positions, as stated above.

There are certainly ways that the detrimental impacts of layoffs can be addressed. In this case, the Joint Applicants are proposing severance packages for terminated employees. Such compensation will assist individual employees that are terminated as a result of the proposed transaction, but of course such severance packages come at a cost. The question

1 for the KCC is whether the labor cost savings justify the detrimental impact of job losses and  
2 whether severance packages are both reasonable and sufficient.

3  
4 **D. Effect on KCC Jurisdiction**

5 **Q. Will the proposed transaction preserve the jurisdiction of the KCC and the capacity of**  
6 **the KCC to effectively regulate and audit public utility operations in the state?**

7 **A.** The proposed transaction will generally preserve the jurisdiction of the KCC and the capacity  
8 of the KCC to effectively regulate and audit public utility operations in the state. However,  
9 to this end, the KCC should ensure that if it does approve the proposed transaction, such  
10 approval is contingent upon GPE's assurance that the KCC will retain its right to regulate all  
11 affiliate transactions, including those that may be subject to other regulatory bodies as well.  
12 For example, the KCC should not be bound by allocation factors or methodologies  
13 authorized by other regulatory jurisdictions, even if differences among allocation  
14 methodologies result in the Joint Applicants' failure to recover all of its costs. Similarly, the  
15 Joint Applicants should be precluded from arguing that federal regulatory authorities take  
16 precedence over state regulation with regard to cost allocations from affiliates.

17 While the KCC should preserve its full authority and jurisdiction to regulate the  
18 utility operations of Westar and KCP&L, it should be noted that there are differences among  
19 utility companies with regard to the extent of regulatory cooperation. In my experience,  
20 Westar is far more cooperative than KCP&L with regard to the regulatory process. As an  
21 example, in this case, Westar has been more forthcoming than KCP&L with regard to the

1 provision of documents. So while the KCC will retain regulatory jurisdiction if the proposed  
2 transaction is approved, it should also consider the fact that it may be more difficult in the  
3 future to obtain certain information from GPE than it has been from Westar.

4  
5 **E. Effect on Public Utility Shareholders**

6 **Q. What is the effect of the transaction on affected public utility shareholders?**

7 **A.** The effect of the transaction will depend on which shareholders are being considered.  
8 Westar shareholders will benefit handsomely if the proposed transaction is approved. This is  
9 because Westar shareholders will receive a significant premium for their stock. They will  
10 also receive a significant premium over the net book value of the assets being transferred.  
11 Thus, the impact on Westar shareholders is very beneficial. It should also be noted that  
12 Westar executives, as significant shareholders in Westar, also stand to materially benefit  
13 from the transaction. As noted earlier, the proposed transaction will result in the settlement  
14 of approximately \$46 million of Westar equity awards to current Westar employees, much of  
15 which will accrue to the benefit of its officers, executives, and directors. As stated on page  
16 109 of the Proxy Statement, there are five directors that have deferred equity compensation  
17 agreements that could result in payments ranging from \$1.64 million to \$5.48 million. Page  
18 113 of the Proxy Statement indicates that Mr. Ruelle is expected to receive a payment of  
19 \$10.75 million if the proposed transaction is completed. Thus, the Westar individuals that  
20 negotiated and authorized the sale will benefit handsomely from the transaction.

21 The effect of the transaction on GPE shareholders is less certain. In its proxy

1 statement GPE stated that the proposed transaction would be accretive to earnings, resulting  
2 in an increase in earnings per share of approximately 10% by 2020. This estimate has since  
3 been reduced, given the actual financings that have occurred to date and the updated financial  
4 projections. Currently GPE estimates that the proposed transaction will only provide a  
5 modest accretion to earnings by 2020. In return for this modest increase in earnings,  
6 shareholders would then own a much larger company, but one that is significantly more  
7 leveraged and more risky. The question is whether the potential increase in earnings  
8 projected by GPE justifies the significant increase in financial risk resulting from financing  
9 of the proposed transaction with new long-term debt that will become a permanent part of  
10 GPE's capital structure.

11  
12 **F. Effect on Kansas Energy Resources**

13 **Q. What is the effect of the proposed transaction on Kansas energy resources?**

14 **A.** As noted earlier, the proposed transaction could result in an early termination of certain  
15 Kansas energy resources. In addition, it could result in more efficient use of such resources  
16 if the proposed transaction has a favorable impact on reserve margins. The proposed  
17 transaction could also enhance the efficiency of generation resources that are jointly owned  
18 by Westar and KCP&L.

19 As discussed earlier, the proposed transaction could also have a detrimental impact  
20 on Kansas energy resources due to employee layoffs, including labor reductions at generating  
21 facilities. Kansas energy resources could also be negatively impacted if there are

1 unreasonable reductions in capital expenditures and/or unreasonable reductions in  
2 maintenance spending. Given the significant financial pressure on GPE that will result from  
3 financing this transaction, such reductions are certainly possible. Therefore, I believe that the  
4 effect of the proposed transaction on Kansas energy resources is unknown.

5  
6 **G. Effect on Economic Waste**

7 **Q. What is the effect of the proposed transaction on economic waste?**

8 **A.** The Joint Applicants suggest that the proposed transaction will result in the more efficient  
9 use of resources, thereby minimizing economic waste. With regard to utility operations, the  
10 expectation is that the synergies of merging two contiguous utilities that share an ownership  
11 interest in certain generation facilities will enhance efficiencies and reduce waste.

12 However, the Joint Applicants do not address the issue of whether paying \$2.30 for  
13 every dollar of utility assets is the most efficient economic use of these funds. As noted  
14 earlier, the proposed transaction will result in \$4.8 billion of goodwill being recorded on  
15 GPE's balance sheet. One could argue that paying Westar's shareholders \$60 per share for  
16 their stock increases economic waste, especially considering that the projected synergy  
17 savings do not justify the additional financial risk that will result from the proposed  
18 transaction.

1           **H.     Effect on Public Safety**

2           **Q.     Will the proposed transaction have an effect on public safety?**

3           **A.**     The Joint Applicants argue that the transaction will not negatively impact public safety.  
4           While one would hope that public safety would not be negatively affected by the transaction,  
5           there is a risk that GPE will need to cut additional costs in order to finance its debt service  
6           requirements and/or its commitments to shareholders. While the KCC would retain  
7           jurisdiction to mandate safe electric service in Kansas, the impact of such cost cutting  
8           measures on public safety may not be immediately apparent. For example, utilities may be  
9           able to reduce spending for some period without a corresponding reduction in safety and  
10          reliability parameters. However, at some point, safety and reliability will be negatively  
11          impacted unless adequate capital expenditures are made and adequate maintenance programs  
12          are implemented. Cost cutting cannot continue indefinitely without negatively impacting  
13          service, including public safety. Therefore, the public safety issue, like many of the issues in  
14          this case, is directly related to the purchase price and to the financial risk inherent in the  
15          proposed financing of the transaction.

16  
17          **I.     Summary of Merger Standard Compliance**

18          **Q.     Given your assessment of the proposed transaction in light of the Merger Standards**  
19          **that have been adopted by the KCC, do you believe that the transaction as currently**  
20          **structured is in the public interest?**

21          **A.**     No, I do not. The bottom line is that GPE is paying a high price for Westar. Moreover, the

1 proposed financing will put significant financial pressure on GPE and increase risks to  
2 ratepayers. The transaction could not only jeopardize the credit ratings of GPE and its  
3 subsidiaries, but it would also put financial pressure on GPE to cut additional costs, resulting  
4 in deterioration of electric service as management seeks ways to meet its debt service  
5 requirements and deliver on its commitment to shareholders. Even if one accepts the Joint  
6 Applicants' estimate of potential savings and financial projections, the proposed transaction  
7 provides no financial margin for error. While there are certainly some benefits of the  
8 proposed transaction, on balance, I do not believe that the proposed transaction as currently  
9 structured is in the public interest.

10  
11 **VI. OTHER RECOMMENDED PROVISIONS**

12 **Q. If the KCC approves the proposed transaction, what additional provisions or**  
13 **safeguards would you recommend?**

14 **A.** If the KCC approves the proposed transaction, then I recommend that it impose the  
15 following additional provisions:

- 16 1. For ratemaking purposes, the KCC should utilize the consolidated GPE capital  
17 structure.
- 18 2. Westar and KCP&L dividends to GPE should be limited to the net income earned by  
19 the utilities, and no dividends should be paid by Westar or KCP&L to GPE unless  
20 GPE and its subsidiaries all maintain investment grade ratings.
- 21 3. Costs related to common branding should not be recovered from ratepayers.

- 1           4.     Any transition costs that the KCC permits the Joint Applicants to recover from  
2                     ratepayers should be amortized over a reasonable period of time and should not  
3                     accrue carrying costs.
- 4           5.     Any movement toward rate consolidation should move KCP&L toward the Westar  
5                     rate structure.

6

7     **Q.     Why do you believe that it would be appropriate to utilize the consolidated GPE capital**  
8           **structure if the proposed transaction is approved?**

9     **A.**    I believe that it would be appropriate to utilize the consolidated GPE capital structure  
10           because that is the capital structure that is actually financing utility operations. The  
11           individual utility capital structures that the Joint Applicants propose to utilize for ratemaking  
12           purposes reflect an artificially high level of equity that, in turn, is being financed with  
13           holding company debt. In addition, the Joint Applicants have minimal non-regulated  
14           operations. This is not a situation where a holding company is financing a broad mix of  
15           various business enterprises, both regulated and non-regulated. In that case, the consolidated  
16           capital structure may not be appropriate to use for ratemaking purposes. However, in this  
17           case, the GPE consolidated capital structure is the capital structure that is financing the  
18           utilities. As pointed out by Moody’s in its Rating Assessment, it is only “financial  
19           engineering” that creates the significant dichotomy between the utility capital structures and  
20           the consolidated capital structure.

1 **Q. Why do you believe that it is appropriate to limit dividends to net income earned by the**  
2 **utilities and to require the suspension of dividends in the event an investment grade**  
3 **credit rating is lost?**

4 **A.** As discussed at length in this testimony, GPE will be under significant financial pressure to  
5 meet its debt service requirements and its stated commitments to shareholders. Ultimately, it  
6 is the utilities that will provide the revenue streams necessary to meet these commitments.  
7 The Commission should ensure that the financial assets of the utilities are not jeopardized by  
8 GPE's financial commitments to investors resulting from this transaction. Limiting  
9 dividends from the utilities to the net income actually earned by the utilities will ensure that  
10 GPE cannot take more out of the utilities than what is being generated annually. In addition,  
11 requiring a suspension of utility dividends if an investment grade credit rating is lost provides  
12 an additional incentive to GPE to maintain its investment grade ratings. It effectively  
13 requires GPE's shareholders to assume a portion of the risk associated with the loss of an  
14 investment grade rating, which should provide an additional protection for ratepayers.

15  
16 **Q. Why should costs associated with a common branding be recovered from shareholders?**

17 **A.** The officers of the Joint Applicants, as well as their shareholders, are driving this merger  
18 proposal. Creating and implementing a common brand for Westar and KCP&L will be a  
19 costly proposition. Moreover, it will largely benefit the consolidated GPE institutional  
20 entity. There is no reason for ratepayers, who would already be subject to significant  
21 financial risk if the proposed transaction is approved, to also be responsible for payment of

1           these costs.

2  
3       **Q.    If the proposed transaction is approved, why should any authorized transition costs**  
4       **be amortized over some reasonable period of time without carrying charges?**

5       **A.**    First, any transition costs that are incurred should be subject to review of all parties and  
6           each party should be free to argue against recovery of any such cost. However, to the  
7           extent that the KCC finds that some transition costs should be recovered from ratepayers,  
8           then it would be appropriate to amortize these costs over a multi-year period, given the  
9           fact that the cost savings or other benefits resulting from these costs would be expected to  
10          occur over a multi-year period. Amortization will therefore allow the KCC to better  
11          match the transition costs, which are generally one-time costs, with the resulting multi-  
12          year benefit to ratepayers. At the same time, I see no reason why the KCC should turn  
13          recovery into a profit center for investors by allowing the Joint Applicants to include  
14          carrying costs on the unamortized balances. Therefore, I recommend that transition costs  
15          be amortized over a reasonable period without carrying costs.

16  
17       **Q.    Would it be appropriate for the Commission to approve the acquisition without a firm**  
18       **commitment from KCP&L that it will maintain the conservation-oriented inclining-**  
19       **block rate design currently in place for Westar's residential customers?**

20       **A.**    No. In order to ensure that the conservation-related benefits associated with Westar's  
21          existing residential inclining-block rate structure are available in the future, the Commission

1 should require KCP&L to retain the inclining-block rate structure currently in place for  
2 Westar's residential customers in future rate proceedings, as a condition for approving the  
3 proposed acquisition. I am not recommending that KCP&L be required to change its existing  
4 residential rate structure to mirror that of Westar as a condition for approving the acquisition.  
5 However, if the proposed transaction is approved, it is conceivable that KCP&L might seek  
6 permission to serve residential customers via a consolidated (i.e., single) tariff in a future rate  
7 proceeding. In that situation, CURB recommends that the Commission require KCP&L to  
8 incorporate Westar's inclining-block rate structure in any proposal to consolidate residential  
9 rates, as a condition for approving the proposed acquisition.

10  
11 **Q. If the KCC adopts the five provisions discussed above, would you recommend that the**  
12 **proposed transaction be approved?**

13 **A.** No, I would not. Even if the KCC adopted the above provisions, I believe that the proposed  
14 transaction would still not promote the public interest, given the proposed purchase price and  
15 financing structure. Therefore, even if the KCC adopted these additional ratepayer  
16 safeguards, I would still recommend that the transaction as currently proposed be rejected by  
17 the KCC.

18  
19 **Q. Does this conclude your testimony?**

20 **A.** Yes, it does.

21
