**RE: Docket No. 25-GIMT-322-GIT- AMG Technology Investment Group, LLC d/b/a NextLink –
Annual Certification of Requirements – PUBLIC**

Dear Secretary:

The Kansas Corporation Commission designated AMG Technology Investment Group, LLC d/b/a NextLink (“NextLink”) an Eligible Telecommunications Carrier (“ETC”) for the purpose of providing services supported by the FCC’s Connect America Fund Phase II.

In compliance with FCC and Kansas Commission ETC annual reporting requirements, NextLink is required to file their Annual Certification of Requirements imposed by the Commission in Docket Number 06-GIMT-446-GIT. Please find attached a copy of the certification.

In this filing, Attachments 3 and 4 have been marked confidential; this information is confidential information and, as such, its disclosure to any person other than the company, the Commission, and Staff is prohibited by K.S.A. 66-1220a. The Commission has not issued a protective order in this docket.

Please do not hesitate to contact me if you have questions or concerns.

Respectfully submitted,

/s/ Mark Lammert

FCC 481 – Section 610 Emergency Functionality

AMG Technology Investment Group, LLC dba Nextlink Internet
Section 610 – Emergency Functionality

National Data Center Architecture

- Nextlink maintains a national data center model, occupying eight (8) strategically located facilities across eleven (11) states. These data centers are interconnected and architected to back up each other's operations. This distributed approach ensures:
- Geographic redundancy in the event of regional disruptions (e.g., natural disasters, power grid failures) Load sharing and active-active failover across multiple facilities
- Operational continuity through synchronized system replication and automated traffic routing
- Each facility is equipped with enterprise-grade UPS systems, onsite backup generators, and redundant network infrastructure to support sustained uptime during grid outages.

Resilient Network and Routing Infrastructure

- The network leverages state-of-the-art, industry-standard hardware and software platforms. These systems are engineered for durability and are deployed in hardened environments designed to withstand extreme weather and environmental stress.
- POP Redundancy: Each Point of Presence (POP) includes failover power capabilities and multiple transport options, including wireless backhaul rerouting and diverse fiber paths.
- Backbone and Transport Layer: All major network paths include redundant transport circuits to reroute traffic in the event of a path or node failure.
- Edge to Core Routing: The network employs full Border Gateway Protocol (BGP) peering with multiple Tier 1 Internet Service Providers, with multiple Network-to-Network Interfaces (NNIs) across the national footprint to ensure Internet access continuity.

Power Continuity and Emergency Power Systems

- Nextlink's critical network sites are provisioned with:
- Uninterruptible Power Supplies (UPS) to handle immediate transition during power loss
- Backup Generators with automatic transfer switches and extended runtime capacity
- Mobile Generator Deployment Capability for extended outages or unreachable areas
- All power systems are regularly tested and maintained in accordance with industry best practices to ensure availability.

24/7 Network Monitoring and Rapid Incident Response

- Nextlink operates a Network Operations Center (NOC) that continuously monitors network health, power conditions, and link integrity across all infrastructure. Advanced alerting systems provide real-time visibility into outage conditions, while predefined escalation protocols ensure:
- Rapid triage and response to service-impacting issues
- Automated failover to redundant systems and routes
- On-call technical personnel positioned across service regions for physical response if needed
