

STATE OF KANSAS

KANSAS CORPORATION COMMISSION

JUL 15 2013

In the Matter of the Application of Grain )  
Belt Express Clean Line LLC for a Siting )  
Permit for the Construction of a High )  
Voltage Direct Current Transmission Line in )  
Ford, Hodgeman, Edwards, Pawnee, Barton, )  
Russell, Osborne, Mitchell, Cloud, )  
Washington, Marshall, Nemaha, Brown, )  
and Doniphan Counties Pursuant to )  
K.S.A.66-1,177, *et seq.* )

by  
State Corporation Commission  
of Kansas

Docket No. 13-GBEE-803-MIS

DIRECT TESTIMONY OF

MARK OWEN LAWLOR

ON BEHALF OF

GRAIN BELT EXPRESS CLEAN LINE LLC

## TABLE OF CONTENTS

I.	INTRODUCTION AND PURPOSE OF TESTIMONY .....	1
II.	THE PUBLIC OUTREACH PROCESS UTILIZED BY GRAIN BELT EXPRESS .....	3
	STAGE ONE .....	6
	STAGE TWO .....	9
	STAGE THREE .....	14
III.	GRAIN BELT EXPRESS' APPROACH TO NEGOTIATIONS WITH LANDOWNERS .....	15
IV.	ADDITIONAL OUTREACH AND SUPPORT FOR THE GRAIN BELT EXPRESS CLEAN LINE PROJECT .....	17

1 *Certain capitalized terms in this testimony have the meaning set forth in the Glossary included*  
2 *as Exhibit C to the Application.*

3 **I. INTRODUCTION AND PURPOSE OF TESTIMONY**

4 **Q. Please state your name, present position and business address.**

5 A. My name is Mark Lawlor. I am Director of Development for Clean Line Energy Partners  
6 LLC (“Clean Line”). Clean Line is the ultimate parent company of Grain Belt Express  
7 Clean Line LLC (“Grain Belt Express” or “Company”), the Petitioner in this proceeding.  
8 I am based in Overland Park, Kansas, but my business address is 1001 McKinney, Suite  
9 700, Houston, TX 77002.

10 **Q. What are your duties and responsibilities as Director of Development of Clean**  
11 **Line?**

12 A. I am responsible for managing the siting process, permitting efforts, public outreach,  
13 environmental considerations, and schedule for the development of the Grain Belt  
14 Express Clean Line transmission project (“Grain Belt Express Project” or “Project”). I  
15 work to integrate and align the Project’s regulatory processes with outreach activities in  
16 the states in which the transmission project is to be located.

17 **Q. What is the purpose of your direct testimony?**

18 A. I am testifying in support of the Grain Belt Express Application for a siting permit.  
19 Specifically, I will describe the public outreach process, the agency coordination with  
20 federal, state, and local authorities used by Grain Belt Express to determine the Proposed  
21 Route for the Project in Kansas. I will describe how we gathered and utilized routing  
22 input from the local authorities, agencies, non-governmental organizations, and  
23 individual landowners throughout the study area. Each of the aforementioned topics is

1 covered in detail in the Routing Report sponsored by Company witness, Mr. Tim Gaul,  
2 attached to his direct testimony as TBG-1. Additionally, I will provide information on  
3 Grain Belt Express' plans for negotiating with landowners to obtain the necessary real  
4 property rights for the project, including transmission line easements.

5 **Q. In addition to your prepared testimony, are you sponsoring any other exhibits?**

6 A. Yes. I am sponsoring the following exhibits:

7 Exhibit **MOL-1** Community leader roundtable meeting statistics

8 Exhibit **MOL-2** Open House meeting invitation

9 Exhibit **MOL-3** Newspapers used to advertise Open House meetings

10 Exhibit **MOL-4** Sample advertisement for Open House meetings

11 Exhibit **MOL-5** Information material presented at Open House meetings

12 Exhibit **MOL-6** Open House statistics

13 Exhibit **MOL-7** Grain Belt Express Code of Conduct

14 Exhibit **MOL-8** Support letters for Grain Belt Express

15 **Q. Please describe your educational and professional background.**

16 A. I received my undergraduate degrees in Political Science and Environmental Studies  
17 from the University of Kansas in 1997 and my Juris Doctor from Washburn University in  
18 2000. Immediately prior to joining Clean Line, I was Project Manager for EDP  
19 Renewables (previously known as Horizon Wind Energy) and was tasked with  
20 developing wind energy projects in Kansas, managing transmission policy in the  
21 Southwest Power Pool ("SPP"), and overseeing legislative and regulatory matters in  
22 Kansas and the region on behalf of the company. Before joining Horizon Wind Energy, I  
23 was a founding partner in a law firm specializing in renewable energy law.

1 landowners to learn about meetings, view maps, read studies relating to the Project, view  
2 regulatory filings, locate third-party resources and provide route-specific comments.

3 The Project also maintains a Facebook page where the public can interact with the  
4 Project team and get regular updates on recent activities and events. In addition to  
5 Facebook, Grain Belt Express distributes a newsletter on a regular basis to hundreds of  
6 stakeholders. These newsletters provide information on project milestones, recent events  
7 and meetings, as well as upcoming project activities. The newsletter is available to  
8 anyone who is interested in receiving a copy.

9 **Q. Please describe the Grain Belt Express Routing Team.**

10 A. A multidisciplinary Routing Team performed the public outreach and participated in  
11 determining the Proposed Route and preparing the Routing Study. Members of the  
12 Routing Team have experience in public outreach and communication, transmission line  
13 route selection, impact assessment for natural resources, land use assessment and  
14 planning, cultural resource identification and assessment, impact mitigation, transmission  
15 engineering and design, and construction. The team's objective was to develop and  
16 execute an extensive, methodical, multi-level public outreach strategy that utilized input  
17 from local authorities, agencies, non-governmental organizations, and individual  
18 landowners throughout the study area. The Routing Team then used the information  
19 collected from this plan to identify a proposed route that provides a reasonable balance  
20 between impacts on local communities and the natural environment, while applying  
21 appropriate routing and technical guidelines, as addressed in the Kansas Routing Report .

22 **Q. What were the objectives of the public outreach process?**

23 A. The objectives of the public outreach process were:

- 1           • To support the data acquisition required for the routing process in order to  
2 determine the Proposed Route. Due to its length, route selection for the Grain  
3 Belt Express Project involved considering a complex set of physical features,  
4 including homes, businesses, cultural and historical resources, other  
5 infrastructure, and environmental factors. Publicly available data sets do not  
6 contain all of the desired information and can be beneficially supplemented by  
7 methodical outreach to local government officials and agencies, non-  
8 governmental organizations with specific expertise and local familiarity, other  
9 utilities and businesses, and local landowners (cumulatively referred to as  
10 “stakeholders”). The extensive outreach associated with this data collection  
11 also provided opportunities to verify the accuracy of the routing data that was  
12 gathered.
- 13           • To communicate the purpose and need for the Project to government officials,  
14 non-governmental organizations, and the public.
- 15           • To communicate to government officials, non-governmental organizations,  
16 and the public other benefits of the Project, such as job creation, additional  
17 governmental revenues, landowner payments for easements, and  
18 environmental benefits.
- 19           • To provide information about, and opportunities for feedback on, the general  
20 and technical routing guidelines as described in the Kansas Routing Report  
21 (Sections 2.4.1 and 2.4.2). Grain Belt Express sought to convey to  
22 stakeholders that the Proposed Route ultimately chosen would be the result of

1 the application of these comprehensive general and technical routing  
2 guidelines.

3 • To convey Grain Belt Express' respect for private property rights and to  
4 provide information about planned construction practices and planned efforts  
5 to minimize and mitigate agricultural impacts.

6 • To provide information about Grain Belt Express' right of way acquisition  
7 process.

8 **Q. Please describe the public outreach process you utilized in Kansas.**

9 A. The public outreach effort in Kansas can be described in three distinct stages. Stage One  
10 began with the inception of the project through the development of a Potential Route  
11 Network. Stage Two covered the period Potential Route Network through Open House  
12 meetings. Finally, Stage Three covered the period following Open House meetings  
13 through the selection of the Proposed Route.

14 Stage One:

15 **Q. Please describe Stage One of the process.**

16 A. Stage One began with the identification of the Resource Area and the point of delivery  
17 for the Project. The Resource Area was identified in southwestern Kansas after studying  
18 the wind resource, location of wind projects under development and compatible land use  
19 for large-scale wind energy projects. A broad project Study Area was identified between  
20 the Resource Area and the point of delivery as described in the Kansas Routing Report,  
21 Section 4.1. Stage One began in May of 2010 after the identification of the Resource  
22 Area and a proposed delivery point in St. Francois County, Missouri. The Project Study  
23 Area at that point included much of Kansas and Missouri. In October 2011, the

1 Midcontinent Independent System Operator, Inc. ("MISO") provided Grain Belt Express  
2 with the System Planning and Analysis results of the interconnection studies which  
3 indicated the upgrades required to deliver 3,500 megawatts ("MW") to the St. Francois  
4 substation would be economically infeasible. In anticipation of these limitations at the  
5 St. Francois substation, the Grain Belt Express team identified the Sullivan substation in  
6 Sullivan County, Indiana, as an alternative delivery point for the Project and initiated a  
7 feasibility study in August of 2011 with PJM Interconnection, Inc. ("PJM"). After  
8 receiving the final study results from MISO in October of 2011, the Grain Belt Express  
9 team designated the Sullivan substation as the new delivery point. At that point, the Study  
10 Area expanded to include portions of Kansas, Missouri, Illinois, and Indiana.

11 Next, the Routing Team led a community outreach program that was designed to  
12 educate the public about the purpose and benefits of the Project, inform community  
13 leaders and the public about the regulatory process and Project timeline, and gather  
14 general comments on the Project and specific information that would support the routing  
15 effort.

16 These meetings included entities such as United States Fish and Wildlife Service,  
17 Kansas Department of Wildlife and Parks and Tourism, Kansas Department of  
18 Commerce, The Nature Conservancy, Kansas Chamber of Commerce, local utilities,  
19 Kansas legislators, local economic development organizations and chambers of  
20 commerce, county commissioners and other county officials. The Routing Team held  
21 over 100 of these meetings in Kansas.

22 The information sought and obtained related to a wide array of topics,  
23 encompassing cultural and historical resources, community buildings such as schools and

1 churches, recreational areas, wildlife habitats, conservation concerns, and existing  
2 infrastructure, such as gas pipelines and other transmission lines.

3 Next, the Routing Team conducted a series of larger group meetings called  
4 community leader roundtables (“Roundtables”). The Grain Belt Express Routing Team  
5 invited to the Roundtables public officials (including federal, state, county and municipal  
6 governmental officials), planning and zoning officials, highway engineers, local  
7 environmental and conservation organization representatives, local Farm Bureau  
8 managers, extension agents, representatives of other agricultural organizations, local fire  
9 and sheriff’s departments, utilities, local economic development representatives, and  
10 anyone suggested by county officials as having a broad understanding of the local  
11 community and geography. A total of 57 Roundtable meetings were held across the four  
12 states. Over 740 community representatives attended these Roundtables across the  
13 Project Study Area, providing valuable insight for the route development process and  
14 commentary on the Project. More than 300 representatives from more than 50 counties  
15 attended the 19 Roundtables held in Kansas. **Exhibit MOL-1** provides a table of the  
16 dates, locations, and number of participants at the Kansas Roundtables. Supplementary  
17 meetings were held in Barton, Ottawa and Clay Counties after potential routes were  
18 identified in those counties. These supplementary meeting were similar to the  
19 Roundtables in their objectives and outcomes.

20 At each meeting, members of the Routing Team provided an overview of the  
21 Project and a description of the routing process. The Routing Team also described the  
22 routing criteria used for siting the transmission line. The presentation was followed by a  
23 working session where participants provided specific information about their community

1 to aid the route development process. Community leaders helped identify potential future  
2 land use plans, such as the construction of new water storage facilities, communication  
3 towers, or new industrial, commercial or residential development. Community leaders  
4 also helped to identify the approximate location of existing features such as, historic sites,  
5 mining activities, communication towers, airstrips, schools, churches, etc. Data provided  
6 by community leaders at the Roundtables were considered in the Routing Team's route  
7 development efforts. Community leaders were also asked to propose potential routes in  
8 their county that take into consideration the routing criteria.

9 As described in Section 4 of the Routing Report, the information collected during  
10 Stage One of the public outreach process was used to identify and compare Conceptual  
11 Routes from the Resource Area to the point of delivery. This information assisted the  
12 Routing Team in identifying the northern portion of the Study Area to be the most viable  
13 for the Project and led to focused efforts in that portion of the Study Area for  
14 development of the Potential Route Network in Kansas.

15 Stage Two:

16 **Q. What outreach steps were taken in Stage Two of the public outreach process?**

17 A. During Stage Two, the Potential Route Network was shown to state and local planners  
18 and elected officials, conservation-focused non-governmental organizations, and other  
19 stakeholders in the northern portion of the Study Area. The Potential Route Network was  
20 also presented to federal and state regulatory agencies for additional feedback and  
21 comment. Information gathered at these meetings was utilized to inform the Routing  
22 Team in further refinement of the Potential Route Network. Grain Belt Express held over

1 47 of these meetings in Kansas, which helped refine the Potential Route Network in  
2 advance of the Open House meetings.

3 The Routing Team then scheduled Open House meetings throughout the counties  
4 involved in the Potential Route Network in Kansas.

5 **Q. What steps were taken by Grain Belt Express to publicize the Open House meetings**  
6 **that were held?**

7 A. Invitations were mailed to all landowners with property within roughly 1.5 miles of the  
8 centerline of each Potential Route segment. These landowners were identified by  
9 obtaining parcel ownership information from the relevant county Register of Deeds.  
10 Invitations were mailed directly to more than 11,200 people with property along the  
11 Potential Route Network.

12 Each invitation included a high-level map of the Potential Route Network, a list of  
13 the meeting times and locations, a website address, an RSVP phone number, and an e-  
14 mail address to which landowners could send their questions and requests for more  
15 information. **Exhibit MOL-2** includes an example of the invitation. The Grain Belt  
16 Express team also promoted the Open Houses by contacting the local media and by  
17 purchasing ads to run prior to the Open Houses in print publications.

18 **Exhibit MOL-3** provides a list of the newspapers in which these paid  
19 advertisements were published along with the dates and locations of the Open Houses.  
20 **Exhibit MOL-4** provides a copy of an example advertisement printed in these local  
21 newspapers. A total of 14 Open House meetings were held across the state along the  
22 Potential Route Network.

23 **Q. Please explain how the Open Houses were conducted.**

1 A. At the entrance to each Open House, a welcome table was set up, where the names and  
2 contact information for the attendees were recorded. Attendees were provided with a  
3 project overview brochure and a comment card with a unique identification number in  
4 order to link contact information with comments to be collected. Landowners were  
5 encouraged to return the comment card either at the Open Houses or later via the U.S.  
6 Postal Service or web interface/electronic mail. DVDs containing a project introductory  
7 video and construction simulation video were also available for attendees. The arriving  
8 attendees were then assigned to a host. Grain Belt Express trained and provided  
9 approximately 18 hosts for these Open Houses, all of whom were employees of Clean  
10 Line, members of the Routing Team, or other contractors working on the Project. The  
11 hosts led attendees through a series of nine poster boards that provided information about  
12 the Project. The hosts explained the content of the posters and answered questions asked  
13 by the participants. As shown in **Exhibit MOL-5**, the posters included information about  
14 Clean Line's mission, the purpose and need for the Grain Belt Express Project, depictions  
15 of potential structure types, a summary list of the routing guidelines, a description of the  
16 routing process, a timeline of the development of the Project, and other relevant Project  
17 information.

18 Following the guided tour of the poster boards, the participants were able to  
19 examine large-scale maps, with aerial imagery of the Potential Route Network and were  
20 provided the opportunity and encouraged to document the location of their houses, places  
21 of business, properties of concern, or other sensitive resources on the printed maps.  
22 Routing Team members worked with landowners and ensured that each comment or  
23 group of comments provided by an attendee was also referenced to the number on the

1 attendee's individual comment card (by recording it on or next to the attendee's  
2 comments on the map).

3 Computerized Geographic Information System ("GIS") stations were provided for  
4 more detailed information than was available on the printed maps. Landowners were  
5 able to sit down with a GIS technician and provide input via a GIS workstation.  
6 Landowners were able to search for their property by tax roll name, street address, or  
7 property description and provide comments. The comments were recorded via small,  
8 numbered, circular stickers, each of which corresponded to notes taken in notebooks by  
9 the hosts during the Open House. Attendees were asked to provide any information  
10 about the areas under consideration, including: the categorization of homes on the maps  
11 as occupied or unoccupied; the identification of homes missing from the maps; and the  
12 identification of any important features that the Routing Team may not have been able to  
13 identify or obtain from route surveys or other data sources, such as community  
14 recreational areas, unmarked cemeteries, or any other feature that attendees believed to be  
15 significant. The comments were collected by the hosts and reported to a central person at  
16 the end of each Open House, combined with data from the comment cards. The  
17 comments were then digitized, assembled in a GIS database, and integrated into the  
18 routing process, as further described in the Routing Report.

19 **Q. Were the Open Houses held during Stage Two successful in terms of the number of**  
20 **attendees and the usefulness of the data collected?**

21 A. Yes, the Open Houses were very successful. More than 2,300 people participated in the  
22 14 Open Houses in Kansas. **Exhibit MOL-6** provides a table of the Open House  
23 locations and the number of participants at each. Attendance was strong for these

1 meetings with most ranging from 117 to 226 participants. The one exception was the  
2 Open House meeting in Russell on January 31, 2013. On this day, there was a snow  
3 storm that we believe had an impact on the invitees' ability to attend. As a result, Grain  
4 Belt Express held a second Open House in Russell on March 12, 2013. The combined  
5 attendance for these two meetings in Russell was 136, which was typical of other  
6 meetings in the area.

7         These Open Houses were also very helpful in terms of data collection, with  
8 thousands of routing comments and more than 2,000 comment cards collected.  
9 Comments included information about the status of homes near Potential Routes  
10 (whether they were occupied or not), the presence of center pivot irrigators, location of  
11 popular recreation areas, details about local airfields, etc. Because of the detail available  
12 through the maps used during the Open Houses, the extensive public comments received,  
13 and the knowledge of the public regarding their own communities, the data collected at  
14 this point were more granular and specific than the data collected at the Roundtables.  
15 The information gathered at the Open Houses was used to refine the Potential Route  
16 Network, eliminate portions of the network and develop a set of Alternative Routes, as  
17 described in Section 4 of the Kansas Routing Report.

18 **Q. Following the Open Houses, how did the Routing Team manage comments and**  
19 **feedback from the public?**

20 A. After the Open Houses, all landowners and stakeholders were encouraged to submit  
21 general comments or routing-specific comments through the Grain Belt Express website.  
22 These comments and questions were tracked in a comment management system called  
23 "Connect." The Routing Team reviewed each comment and responded in writing or by

1 phone to individuals posing a specific question. Where a commenter provided route-  
2 specific information or input, the comments were used in reviewing and modifying the  
3 various route alternatives. In addition, landowners and other stakeholders contacted the  
4 Grain Belt Express team by phone or email. Each of the communications was recorded  
5 in the same location as online comments in Connect. In total, there were over 2,400  
6 comments collected and stored in Connect. The Routing Team directly responded in  
7 writing or by phone to individuals who requested more information or to be contacted by  
8 a Routing Team member.

9 Stage Three:

10 **Q. Please describe the outreach measures taken by Grain Belt Express to seek feedback**  
11 **on the Potential Route Network in Stage Three following the Open Houses.**

12 A. In Stage Three the Routing Team continued to meet with local and state officials as well  
13 as the public. Outreach was conducted in each county where the Potential Route  
14 Network was located through letters, phone calls, or in-person meetings. Dozens of these  
15 meetings were held after the Open Houses and before filing the Proposed Route.  
16 Members of the Routing Team met with county commissioners, state officials, individual  
17 landowners, state agencies and organizations such as the Kansas Farm Bureau and the  
18 Kansas Livestock Association. Specifically, numerous meetings with landowners in  
19 Marshall County were held to address specific questions and concerns as well as  
20 meetings with commissioners in northern Kansas to address issues ranging from property  
21 tax revenue to construction mitigation payments for the counties.

1 **Q. Has Grain Belt Express adopted a Code of Conduct for its land agents in interacting**  
2 **with landowners?**

3 A. Yes. Grain Belt Express believes that establishing a Code of Conduct for our land  
4 acquisition agents will help establish a tone of respectful dialogue and may also be  
5 supportive of voluntary transmission line easement acquisition. **Exhibit MOL-7** is  
6 Grain Belt Express' Code of Conduct. It requires (among other things) that all  
7 communications with landowners and other persons made by right-of-way agents and  
8 subcontractor employees representing Grain Belt Express must be factually correct, made  
9 in good faith, respectful and reflective of fair dealing, and respectful of the privacy rights  
10 of property owners.

11 **Q. Please describe Grain Belt Express' proposed compensation package.**

12 A. Grain Belt Express proposes a payment to the landowner for the transmission right-of-  
13 way easement itself, a payment per structure, and additional payments as compensation  
14 for issues that may arise, such as crop damages, field repair, temporary (during  
15 construction) or permanent impacts to center pivot irrigators that would reduce the  
16 effective area of the irrigation equipment or require new equipment, or other landowner-  
17 specific issues. The landowner will retain the ability to continue agricultural production  
18 on the entirety of the easement except for the relatively small footprint of the structures.  
19 Part of the compensation provided for in the transmission line easement is intended to  
20 compensate for this impact.

21 During our public outreach process, landowners expressed a desire to have the  
22 option for a recurring annual payment. As a result, Grain Belt Express intends to offer  
23 the landowner, at his or her option, either a one-time payment or a recurring annual

1 payment for the structure payments. If elected by the landowner, the annual structure  
2 payment will be made as long as the above-ground transmission structures are present on  
3 the property and Grain Belt Express retains an easement.

4 **Q. How does Grain Belt Express plan to obtain the necessary easement agreements?**

5 A. Assuming Grain Belt Express' Line Siting Application is granted, Grain Belt Express  
6 will seek to acquire as much of the required right-of-way as possible through voluntarily  
7 negotiated transactions. Grain Belt Express will not seek to exercise eminent domain on  
8 a parcel unless and until it has exhausted reasonable efforts to acquire transmission line  
9 easements through negotiated agreement.

10 **IV. ADDITIONAL OUTREACH AND SUPPORT FOR THE GRAIN BELT**  
11 **PROJECT**

12  
13 **Q. In addition to the public outreach described above, did Grain Belt Express conduct**  
14 **any additional outreach?**

15 A. Yes. Throughout the development of the Project, Grain Belt Express has been working to  
16 identify local contractors and suppliers throughout Kansas who have capabilities to  
17 participate in the development, construction, and maintenance of the Project. It is the  
18 goal of Grain Belt Express to connect with these contractors and suppliers to ensure that  
19 they are aware of the Project and will receive notification when certain phases of the  
20 Project are put out to bid. In January of 2013, we held local business opportunity  
21 meetings in Kansas to inform local businesses about the Project and to provide  
22 information about the types of local companies that could assist in the development,  
23 construction, and maintenance of the Project. Nearly 150 business representatives  
24 involved in surveying, aggregate and concrete, trucking and fueling, and other related  
25 activities attended and provided information about their businesses' capabilities. As of

1 the time of this filing, over 200 Kansas businesses have expressed an interest in  
2 performing work on the Project and have provided Grain Belt Express with their  
3 information and capabilities.

4 **Q. Has there been expressed support for the successful completion of the Grain Belt**  
5 **Express Clean Line project?**

6 A. Yes. In addition to the 200-plus letters sent in from individuals, companies and  
7 organizations in Kansas supporting the Company's earlier certification application in  
8 Docket No. 11-GBEE-624-COC, 260 stakeholders have signed an additional 243 support  
9 letters in support of the Project since January of 2012. **Exhibit MOL-8** contains the  
10 support letters received as of the time of this filing.

11 **Q. Does this conclude your prepared direct testimony?**

12 A. Yes.

<b>Roundtable Location</b>	<b>Counties represented</b>	<b>Date</b>	<b>Number of Attendees</b>
Dodge City	Ford, Finney, Gray, Clark, Hodgeman, Meade, Kiowa	May 16, 2011	27

# PLEASE JOIN US!

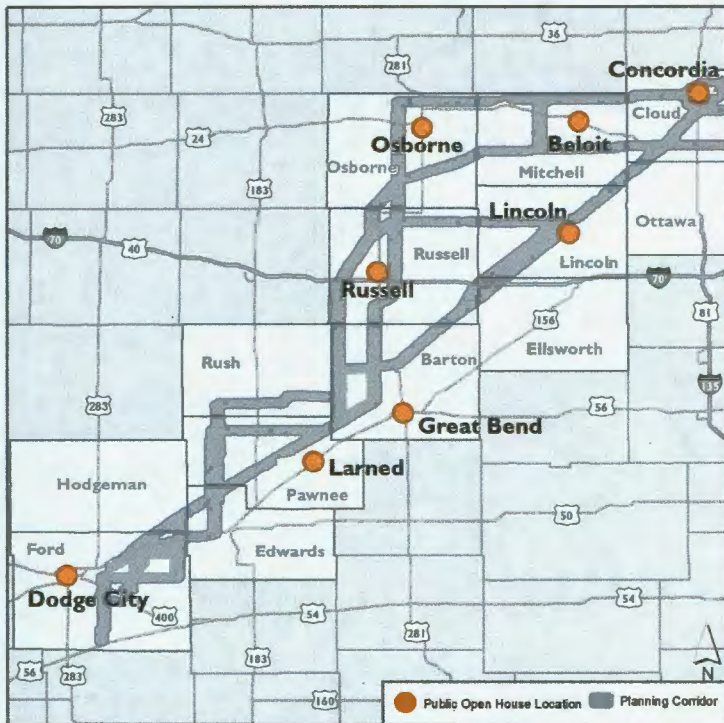

You are invited to an open house to provide feedback on potential routes for the Grain Belt Express Clean Line.

## GRAIN BELT EXPRESS CLEAN LINE

Kansas has superb wind energy resources, but development is limited due to a lack of transmission to transport the energy generated from these resources to communities that need the power. The Grain Belt Express Clean Line will create thousands of jobs and give Kansas the ability to move a domestic energy source to market and enable \$7 billion of new, renewable energy projects to be built in Kansas.

The Grain Belt Express Clean Line is an approximately 700-mile overhead, high voltage direct current (HVDC) transmission line that will deliver 3,500 megawatts of low-cost wind power from Kansas to Missouri, Illinois, Indiana, and states farther east.

### Planning Corridors in Your Area

### GRAIN BELT EXPRESS HAS IDENTIFIED POTENTIAL ROUTES

A network of potential routes has been identified for the transmission line and will be presented at the public open houses. The potential routes are still under review at this time and are subject to change, so we are inviting landowners within an approximately 3-mile wide 'planning corridor' around each potential route to provide their input.

At the open house meetings, we will provide information about the Grain Belt Express Clean Line project and collect feedback that will help us refine the potential routes and ultimately select a single proposed route to file for approval with the Kansas Corporation Commission.

Detailed maps of the potential routes will be available at the open houses and online at [www.grainbeltexpresscleanline.com](http://www.grainbeltexpresscleanline.com)

**➔ RSVP Today!**

Call toll-free 1 (855)358-4340 or email [rsvp@grainbeltexpresscleanline.com](mailto:rsvp@grainbeltexpresscleanline.com).

# PLEASE JOIN US!

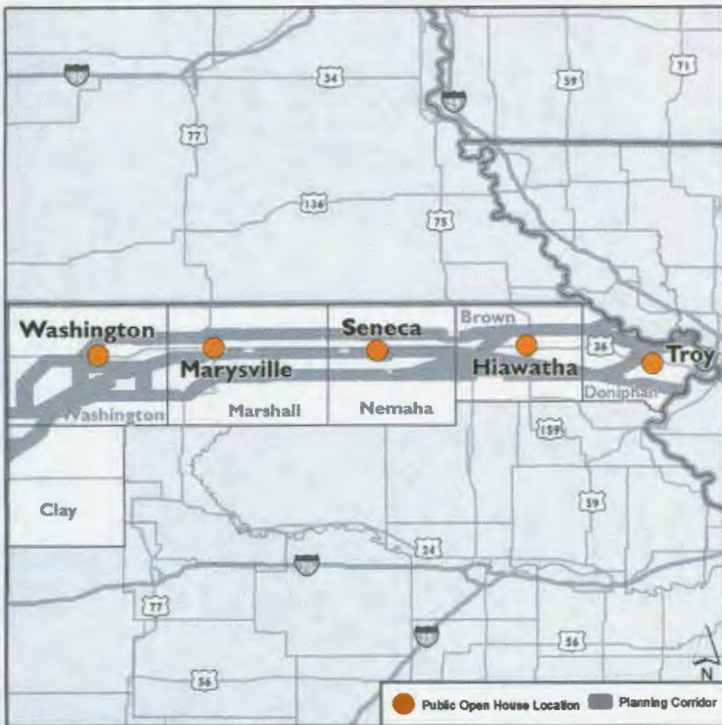

You are invited to an open house to provide feedback on potential routes for the Grain Belt Express Clean Line.

## GRAIN BELT EXPRESS CLEAN LINE

Kansas has superb wind energy resources, but development is limited due to a lack of transmission to transport the energy generated from these resources to communities that need the power. The Grain Belt Express Clean Line will create thousands of jobs and give Kansas the ability to move a domestic energy source to market and enable \$7 billion of new, renewable energy projects to be built in Kansas.

The Grain Belt Express Clean Line is an approximately 700-mile overhead, high voltage direct current (HVDC) transmission line that will deliver 3,500 megawatts of low-cost wind power from Kansas to Missouri, Illinois, Indiana, and states farther east.

AIR

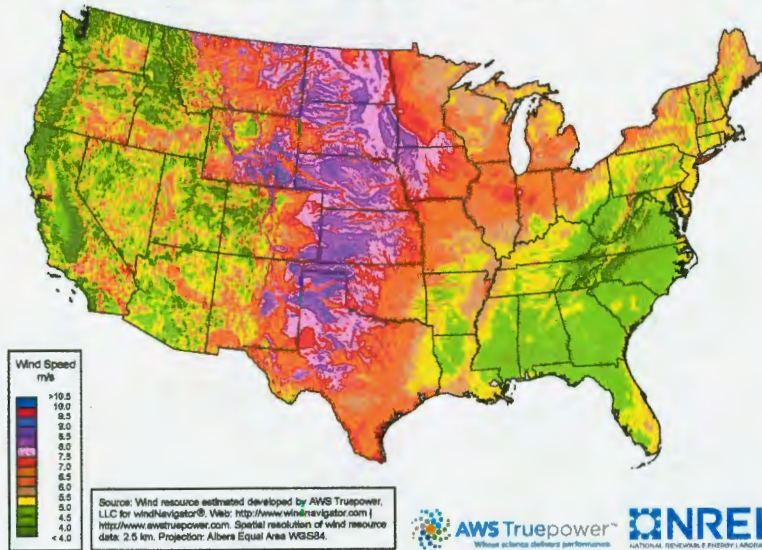

# WELCOME!

The purpose of this open house is to:

- Introduce the Grain Belt Express Clean Line
- Share our transmission line routing process
- Seek your feedback to help us refine potential routes

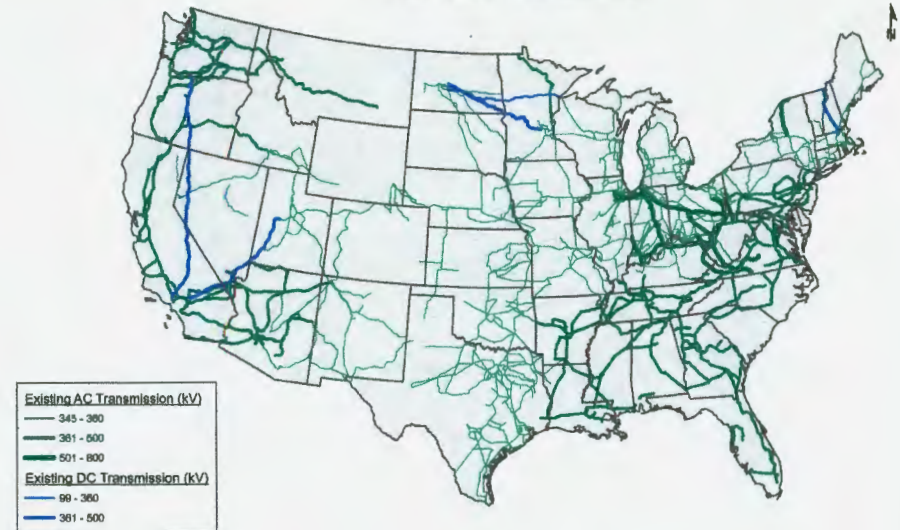

### U.S. Wind Resources

United States - Annual Average Wind Speed at 80 m

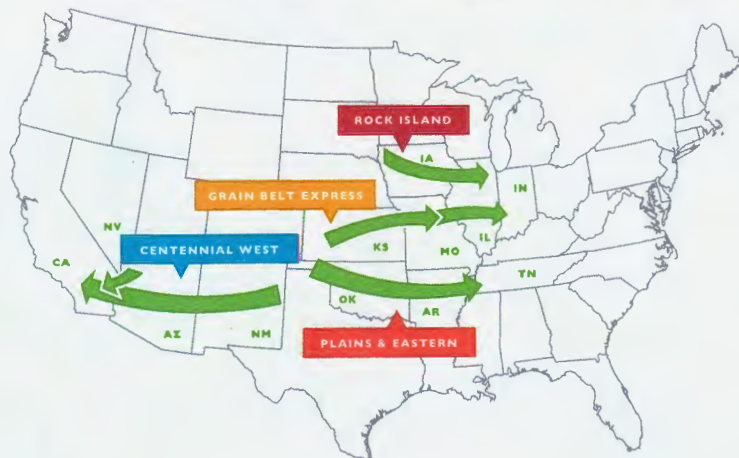

### Existing High Voltage Transmission Lines

U.S. High Voltage Transmission Grid

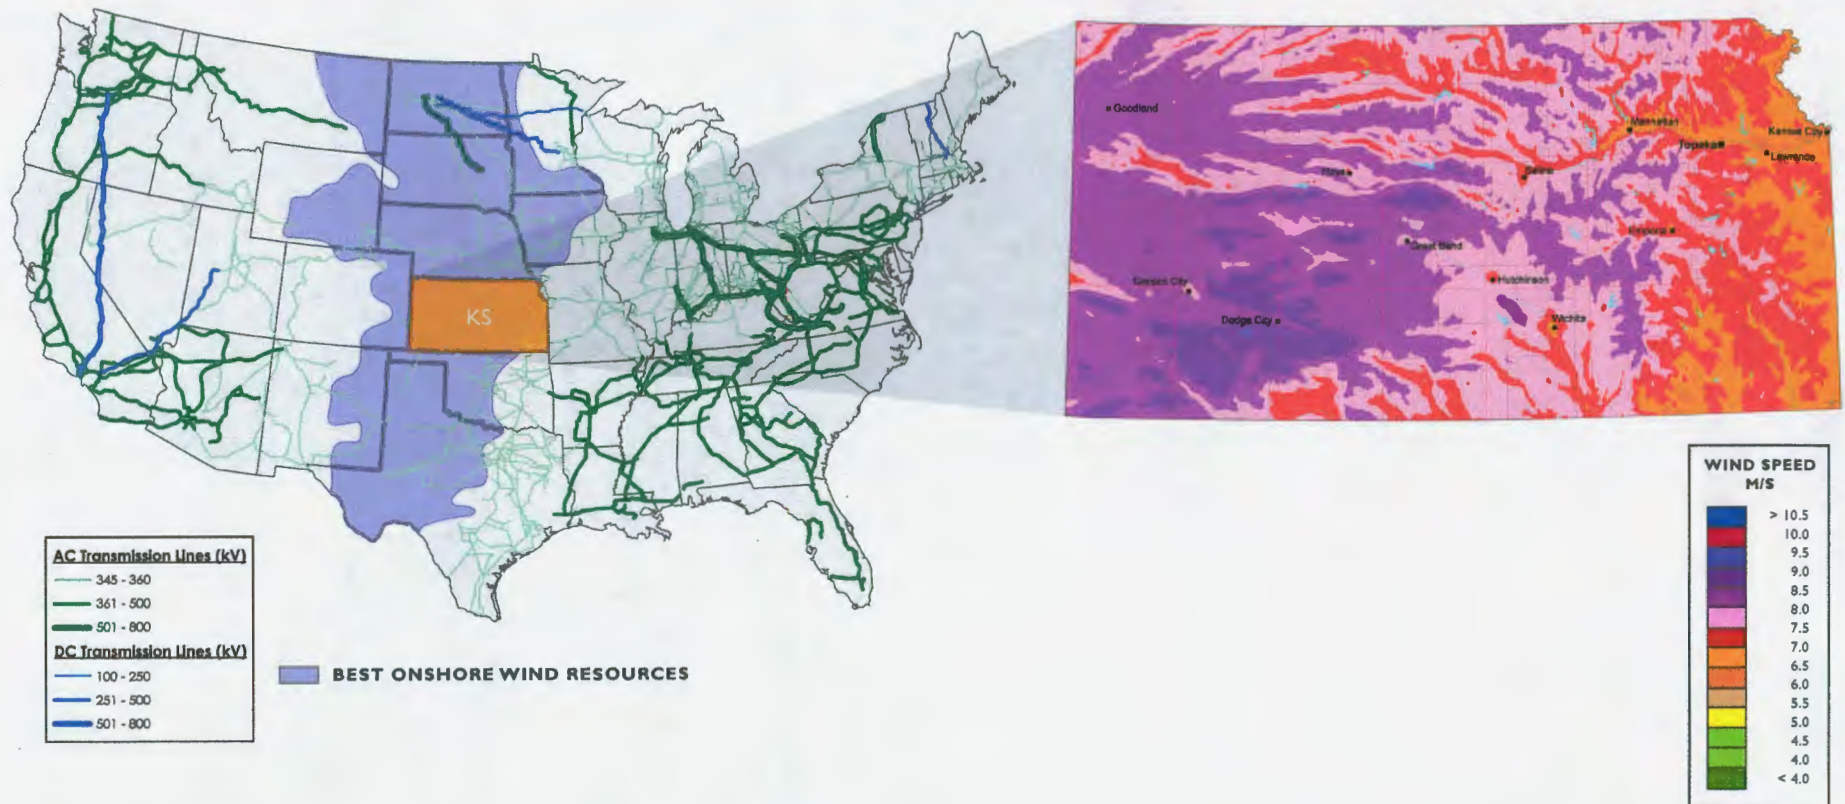

### Clean Line Energy Solution

Clean Line Energy is developing long-haul, high voltage direct current (HVDC) transmission line projects to connect renewable energy sources to communities that need the power.

# KANSAS WIND POTENTIAL

## GRAIN BELT EXPRESS CLEAN LINE

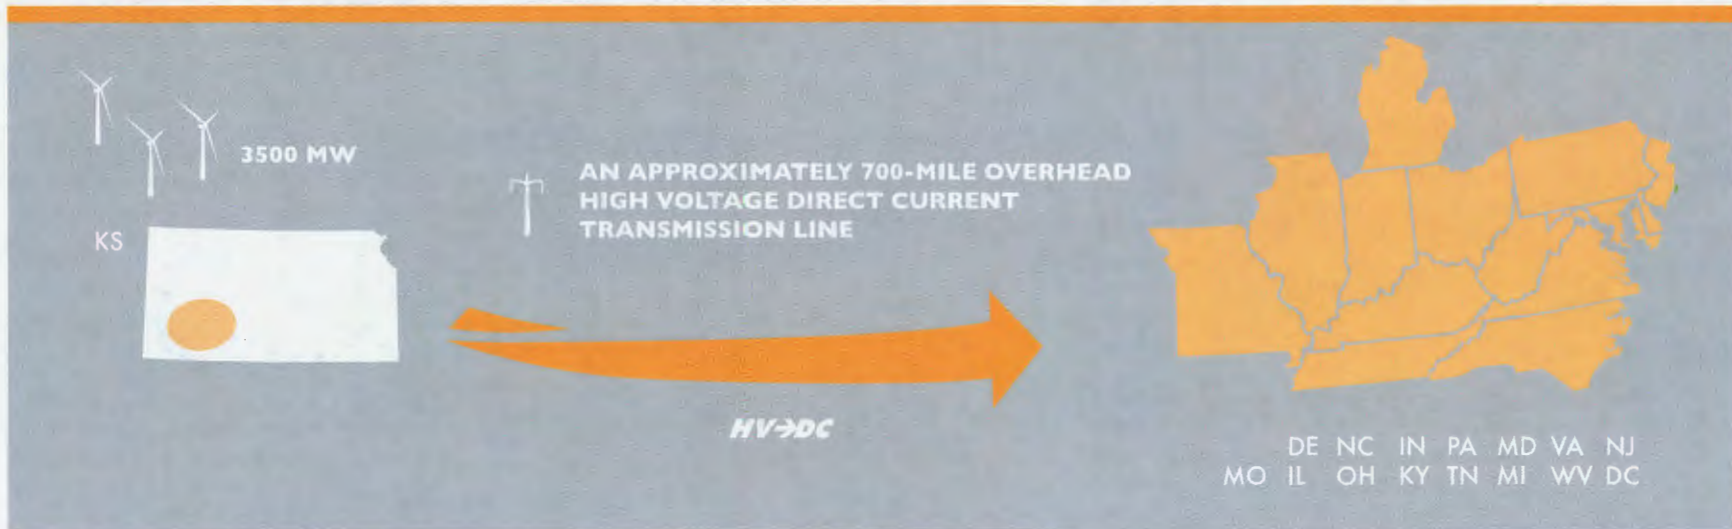

**Kansas' wind resource could generate 950,000 MW, more than 80 times the state's power generation needs.**

- Wind projects currently online: **2,345 MW**
- Wind projects in transmission queue: **9,000 MW**

**Kansas has superb wind energy resources, but development is limited due to lack of transmission.**

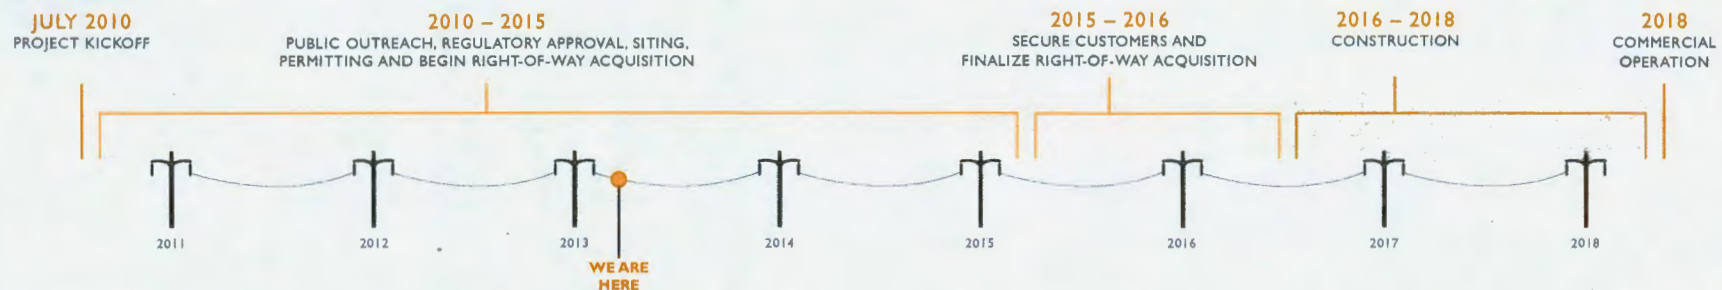

# GRAIN BELT EXPRESS CLEAN LINE

## GRAIN BELT EXPRESS CLEAN LINE

The Grain Belt Express Clean Line is a 700-mile overhead, high voltage, direct current (HVDC) transmission line that will deliver 3,500 megawatts of low-cost wind power from Kansas to Missouri, Illinois, Indiana and states farther east. Similar to the trains that carry grain harvested in the Midwest to markets, the Grain Belt Express Clean Line will move renewable energy from the Grain Belt of the country to markets with a strong demand for low-cost, clean power.

## GRAIN BELT EXPRESS CLEAN LINE SCHEDULE

# ECONOMIC BENEFITS

## GRAIN BELT EXPRESS CLEAN LINE

\$2 BILLION INVESTMENT IN TRANSMISSION

\$7 BILLION IN NEW WIND FARM INVESTMENTS

5000+ CONSTRUCTION JOBS

500+ OPERATIONS JOBS

MANUFACTURING JOBS

LOCAL BUSINESS PARTNERSHIPS

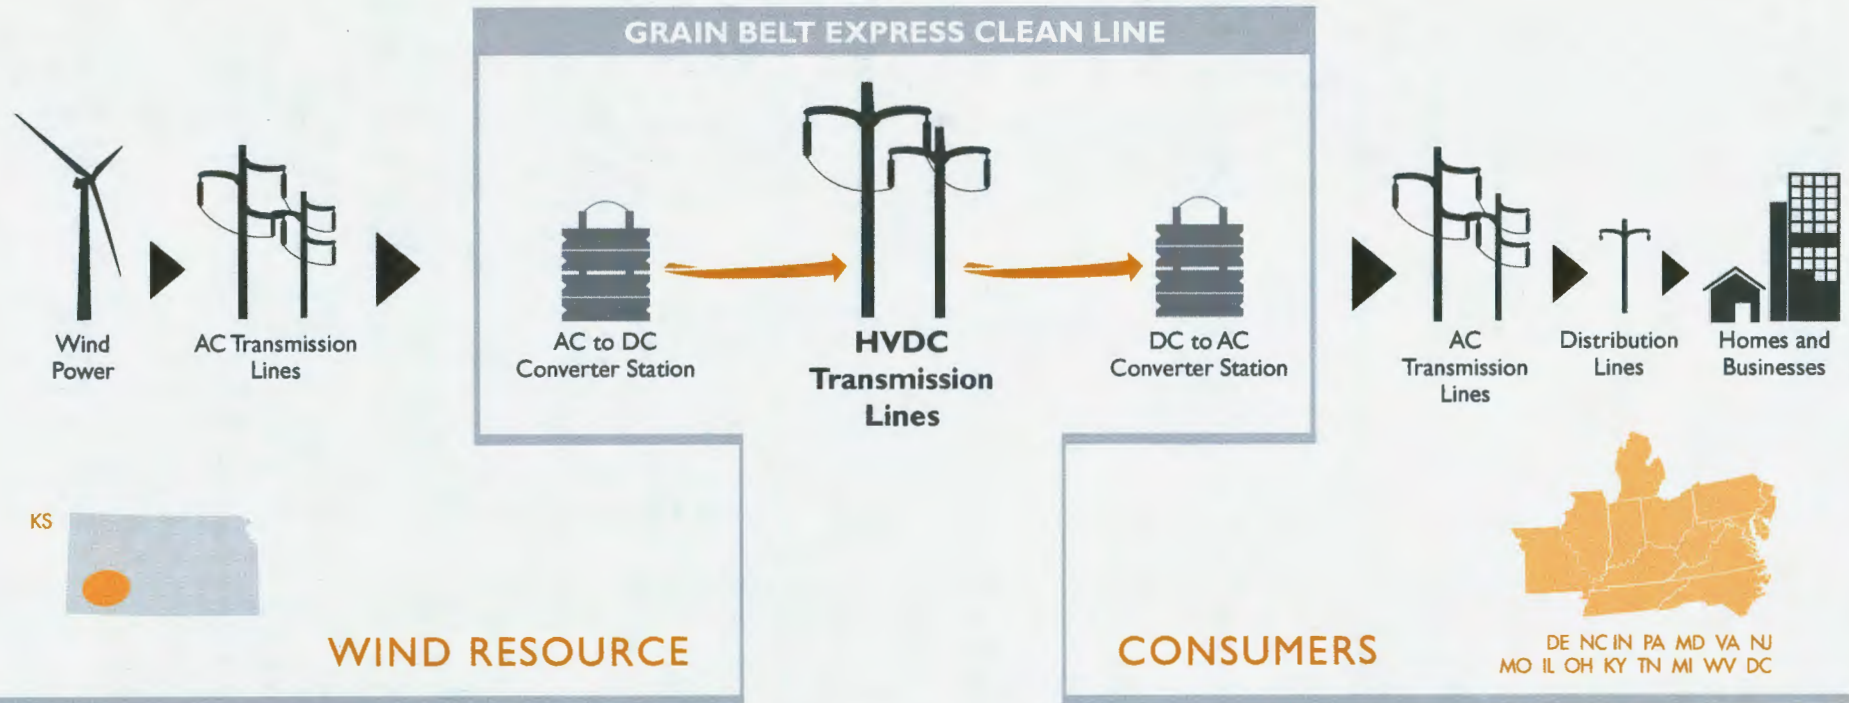

“The Grain Belt Express Clean Line will provide a vital boost in Kansas’ efforts to lead the nation in renewable energy production. The project will bring well-paying jobs, generate revenue for landowners and local communities, and open Kansas’ abundant wind resource to new markets. Transmission projects like this are key in our mission to establish Kansas as not only the Wheat State but also the Wind State.”

— Governor Sam Brownback

# EXPORTING KANSAS WIND ENERGY WITH HVDC

## GRAIN BELT EXPRESS CLEAN LINE

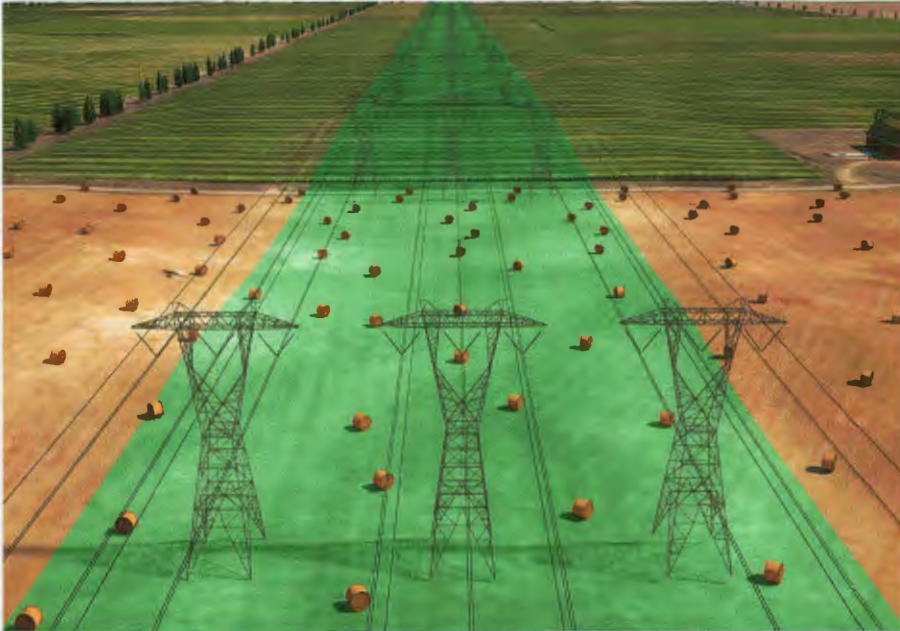

- Wind farms connect with AC lines to converter station, likely in Ford County, KS
- Converter station converts AC power to DC power
- HVDC transmission line delivers power to markets farther east

- DC power converts to AC power at delivery interconnection points
- Existing AC lines distribute energy to end consumers

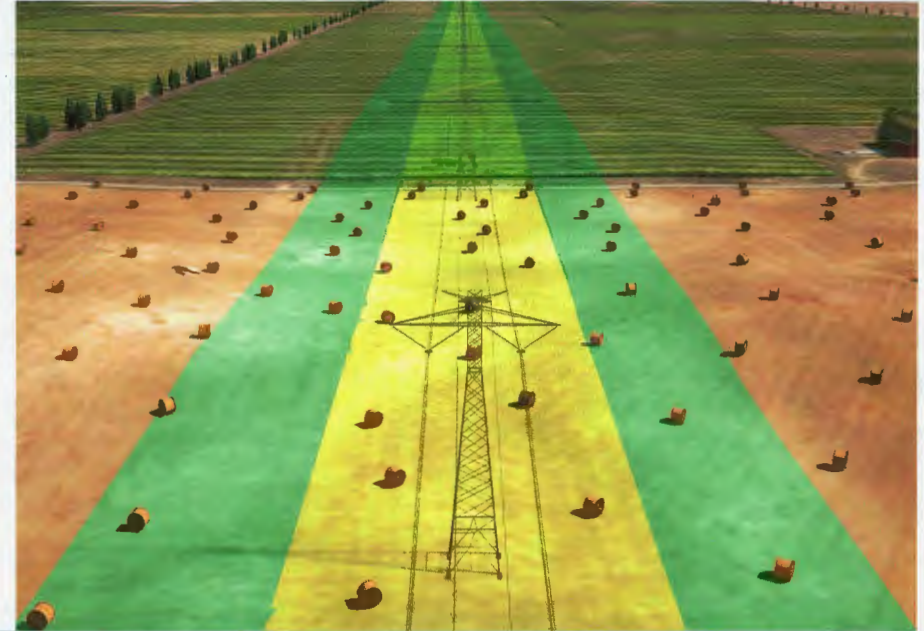

# BENEFITS OF HIGH VOLTAGE DIRECT CURRENT (HVDC)

## GRAIN BELT EXPRESS CLEAN LINE

**Alternating Current**

**Direct Current**

HVDC is the most efficient method to transmit large amounts of electricity over long distances.

### MORE EFFICIENT

Transfers power with less infrastructure and lower line losses than alternating current (AC) lines moving a comparable amount of power over long distances.

### LOWER COST

Requires less infrastructure and has lower line losses, resulting in lower costs and lower prices for clean energy.

### IMPROVED RELIABILITY

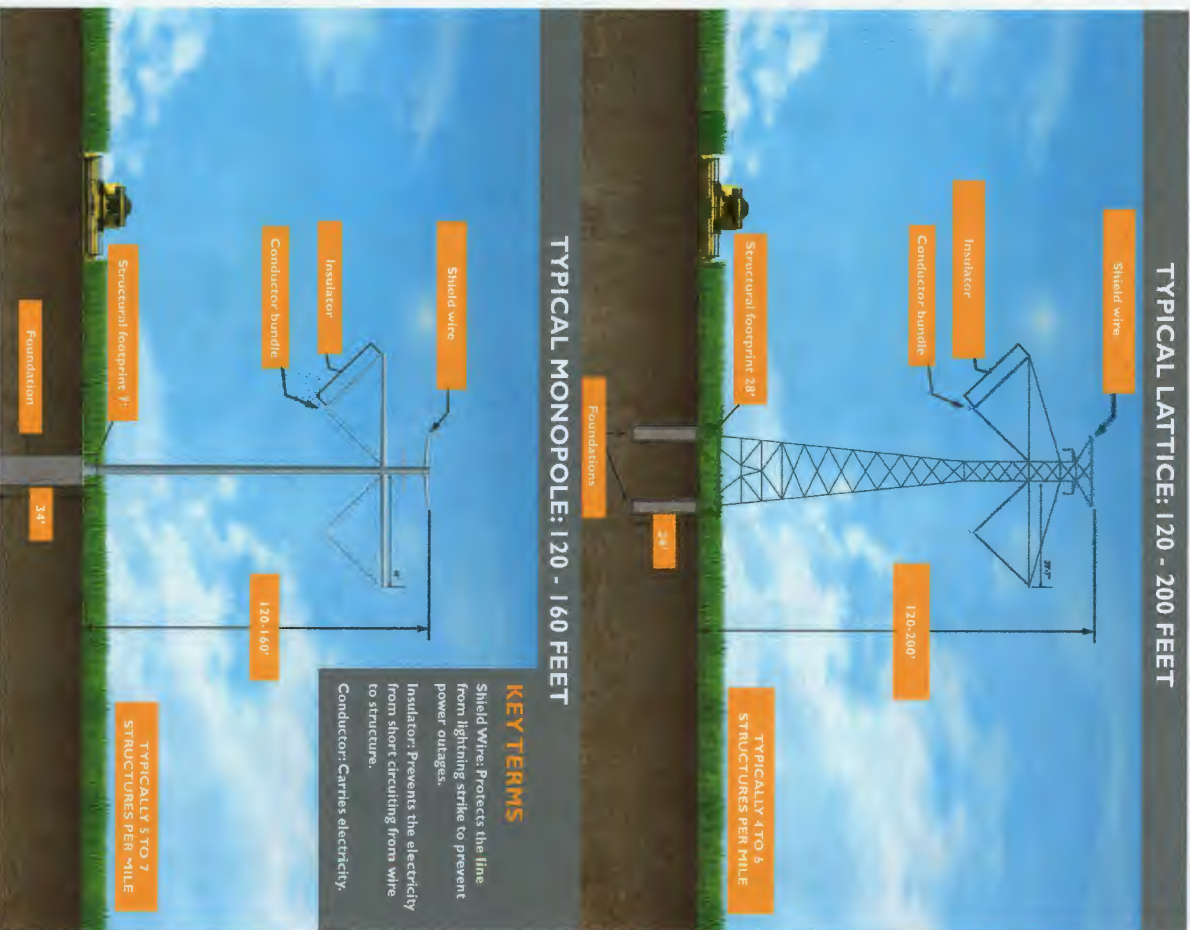

Provides the operator complete control over power flow and facilitates the integration of wind energy from different resource areas.

### SMALLER FOOTPRINT

Uses narrower right-of-way than comparable AC lines.

# TYPICAL STRUCTURES

## GRAIN BELT EXPRESS CLEAN LINE

The photo simulation shows a potential structure size and type. Changes may occur pending public and regulatory reviews, and structures of other sizes and shapes may be necessary depending on a variety of factors, including topography, soil condition, cost and span length.

# OUTREACH AND ROUTING

## GRAIN BELT EXPRESS CLEAN LINE

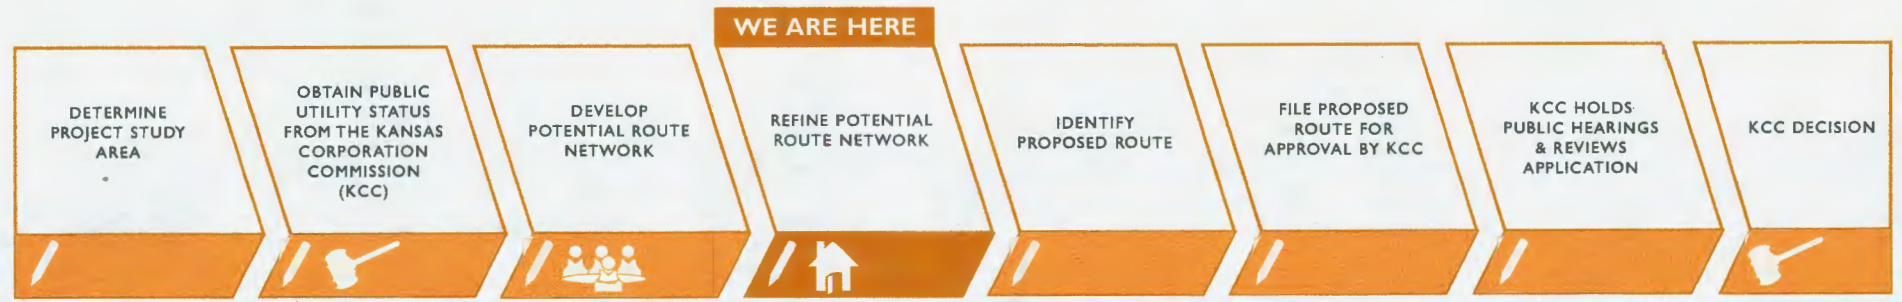

### EXTENSIVE OUTREACH TO DATE

- Met with more than 2,000 people in more than 100 counties to seek input on potential routing options
- Received more than 700 letters in support of the transmission project
- Granted public utility certification from the Kansas Corporation Commission
- Hosted Local Business Opportunity Meetings in Kansas

**PUBLIC INVOLVEMENT IS AN IMPORTANT PART OF DEVELOPING THE GRAIN BELT EXPRESS CLEAN LINE. WE ARE COMMITTED TO ENGAGING WITH THE PUBLIC IN THE DECISION-MAKING PROCESS.**

## KANSAS ROUTING MILESTONES

# LANDOWNER RELATIONSHIPS

## GRAIN BELT EXPRESS CLEAN LINE

**Grain Belt Express Clean Line is committed to working closely with landowners**

### **GRAIN BELT EXPRESS CLEAN LINE WILL WORK WITH LANDOWNERS TO:**

- Consider land use impacts when identifying the route and structure design
- Communicate plans with landowners prior to construction
- Restore fields impacted by construction

### **EASEMENT COMPENSATION PACKAGES WILL CONSIDER A VARIETY OF FACTORS**

- Value of surface property based on comparable sales or appraisals in local area
- Size of easement and location of infrastructure
- Impacts during construction
- Conditions specific to the parcel

### **CODE OF CONDUCT**

Grain Belt Express Clean Line's Code of Conduct details how employees and contractors will treat landowners in a fair and respectful manner.

**Grain Belt Express Clean Line LLC  
Grain Belt Express Clean Line Project  
Code of Conduct**

**For  
Right-of-Way Agents and Subcontractor Employees**

**This Code of Conduct applies to all communications and interactions with property owners and occupants of property by all right-of-way agents and subcontractor employees representing Grain Belt Express Clean Line LLC in the negotiation of right-of-way and the performance of surveying, environmental assessments and the other activities for the Grain Belt Express Clean Line Project on property not owned by Grain Belt Express Clean Line LLC.**

**1. All communications with property owners and occupants must be factually correct and made in good faith.**

- a. Do provide maps and documents necessary to keep the landowner properly informed
- b. Do not make false or misleading statements.
- c. Do not purposely or intentionally misrepresent any fact.
- d. If you do not know the answer to a question, do not speculate about the answer. Advise the property owner that you will investigate the question and provide an answer later.
- e. Follow-up in a timely manner on all commitments to provide additional information.
- f. Do not send written communications suggesting an agreement has been reached when, in fact, an agreement has not been reached.
- g. If information provided is subsequently determined to be incorrect, follow up with the landowner as soon as practical to provide the corrected information.
- h. Do provide the landowner with appropriate contact information should additional contacts be necessary.

**2. All Communications and interactions with property owners and occupants of property must be respectful and reflect fair dealing.**

- a. When contacting a property owner in person, promptly identify yourself as representing Grain Belt Express Clean Line.
- b. When contacting a property owner by telephone, promptly identify yourself as representing Grain Belt Express Clean Line.
- c. Do not engage in behavior that may be considered harassing, coercive, manipulative, intimidating or causing undue pressure.
- d. All communications by a property owner, whether in person, by telephone or in writing, in which the property owner indicates that he or she does not want to negotiate or does not want to give permission for surveying or other work on his or her property, must be respected and politely accepted without argument. Unless specifically authorized by a Grain Belt Express Clean Line, do not contact the property owner again regarding negotiations or requests for permission.
- e. When asked to leave property, promptly leave and do not return unless specifically authorized by Grain Belt Express Clean Line.

f. If discussions with the property owner become acrimonious, politely discontinue the discussion and withdraw from the situation.

g. Obtain unequivocal permission to enter property for purposes of surveying or conducting environmental assessments or other activities. Clearly explain to the property owner the scope of the work to be conducted based on the permission given. Attempt to notify the occupant of the property each time you enter the property based on this permission.

h. Do not represent that a relative, neighbor and/or friend have signed a document or reached an agreement with Grain Belt Express Clean Line, unless asked.

i. Do not ask a relative, neighbor and/or friend of a property owner to convince the property owner to take any action.

j. Do not represent that a relative, neighbor and/or friend supports or opposes the Grain Belt Express Clean Line Project, unless asked.

k. Do not suggest that any person should be ashamed of or embarrassed by his or her opposition to the Grain Belt Express Clean Line Project or that such opposition is inappropriate.

m. Do not suggest that an offer is "take it or leave it."

n. Do not threaten to call law enforcement officers or obtain court orders.

o. Do not threaten the use of eminent domain.

**3. All communications and interactions with property owners and occupants of property must respect the privacy of property owners and other persons.**

a. Discussions with property owners and occupants are to remain confidential.

b. Do not discuss your negotiations or interactions with other property owners or other persons.

c. Do not ask relatives, neighbors and/or friends to influence the property owner or any other person.

## Exhibit **MOL-8** Support letters for Grain Belt Express

More than 260 people have signed letters in support of Grain Belt Express Clean Line's Line Siting Application. The letters signed since January of 2012 are included in this exhibit. These individuals support the project because it will create thousands of local jobs in Kansas, facilitate and produce more home-grown energy, and result in cleaner air. The Grain Belt Express Clean Line will ensure that Kansas continues to lead in wind energy development by providing a means to export wind power to markets farther east.

The supporters represented in this exhibit include more than 75 local business representatives, 15 county and city officials, 80 farmers, landowners and residents in the Project's Resource Area counties, and 20 college students. More than 40 community members from Cloud County, where Development Director Mark Lawlor developed the Meridian Way Wind Farm, signed a letter of support. Supporters of this application include representatives of the following organizations:

- Brown County, KS Commission
- Ottawa County, KS Commission
- Cloud County, KS Commission
- Gray County, KS Commission
- Meade County, KS Commission
- Ford County, KS
- Edwards County, KS
- Pawnee County, KS
- Cloud County, KS
- Nemaha County, KS

## COUNTY OF BROWN, STATE OF KANSAS

COURTHOUSE - 601 OREGON ST.  
HIAWATHA, KS 66434-2283

February 29, 2012

To Whom It May Concern:

The Board of Brown County Commissioners would like to express their support for the Grain Belt Express Clean Line. The United States has some of the best wind resources in the world, making it possible to obtain a sizable portion of our energy from a clean, domestic resource. However, there are thousands of megawatts of projects stranded in development that cannot be built due to insufficient transmission infrastructure. The challenge lies in connecting abundant, low-cost, renewable resources to communities that need the power with an efficient transmission solution.

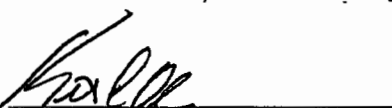

Clean Line Energy is developing projects to address this challenge. The Grain Belt Express Clean Line will create thousands of temporary jobs, enable construction of more than 3,500 megawatts of low-cost, clean energy, and deliver enough electricity to power more than 1.4 million American homes.

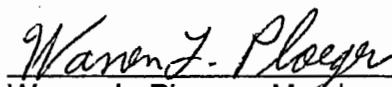

These are just some of the reasons that we support the Grain Belt Express Clean Line and urge you to provide the regulatory approvals required to move this project forward.

Sincerely,

Board of Brown County Commissioners:

  
Steve Roberts, Chairman

  
Keith C. Olsen, Member

  
Warren L. Ploeger, Member

Dear Kansas Corporation Commission:

I am writing to express support for the Grain Belt Express Clean Line, a high voltage transmission line that will enable more than 3,500 megawatts of new wind energy projects to be built in Kansas to export clean energy to states farther east.

Kansas has a rich history of exporting our products across the nation, and it has helped our economy grow. Now Kansas has the opportunity to export wind energy, but the existing transmission grid is limiting our ability to do so. The Grain Belt Express Clean Line offers a solution that will enable us to export wind energy to larger markets to the East. The project will spur billions of dollars in new investments in Kansas, increase economic development, and create thousands of jobs.

The Grain Belt Express Clean Line team is developing the project in a transparent and responsible way. They have been proactive, holding meetings with environmental agencies and hundreds of community members to seek input on routing throughout the development process.

I support the Grain Belt Express Clean Line and urge you to provide the regulatory approvals required to move the project forward.

CHAMPIONS

Dear Kansas Corporation Commission:

I am writing to express support for the Grain Belt Express Clean Line, a high voltage transmission line that will enable more than 3,500 megawatts of new wind energy projects to be built in Kansas to export clean energy to states farther east.

Kansas has a rich history of exporting our products across the nation, and it has helped our economy grow. Now Kansas has the opportunity to export wind energy, but the existing transmission grid is limiting our ability to do so. The Grain Belt Express Clean Line offers a solution that will enable us to export wind energy to larger markets to the East. The project will spur billions of dollars in new investments in Kansas, increase economic development, and create thousands of jobs.

The Grain Belt Express Clean Line team is developing the project in a transparent and responsible way. They have been proactive, holding meetings with environmental agencies and hundreds of community members to seek input on routing throughout the development process.

I support the Grain Belt Express Clean Line and urge you to provide the regulatory approvals required to move the project forward.

Dear Commissioners:

I am writing to express my support for the Grain Belt Express Clean Line. The United States has some of the best wind resources in the world, making it possible to obtain a sizable portion of our energy from a clean, domestic resource. However, there are thousands of megawatts of projects stranded in development that cannot be built due to insufficient transmission infrastructure. The challenge lies in connecting abundant, low-cost, renewable resources to communities that need the power with an efficient transmission solution.

Clean Line Energy is developing projects to address this challenge. The Grain Belt Express Clean Line will create thousands of temporary jobs, enable construction of more than 3,500 megawatts of low-cost, clean energy, and deliver enough electricity to power more than 1.4 million American homes.

I support the Grain Belt Express Clean Line and urge you to provide the regulatory approvals required to move the project forward.

September 2012

Dear Kansas Corporation Commission:

I am writing to express support for the Grain Belt Express Clean Line, a high voltage transmission line that will enable more than 3,500 megawatts of new wind energy projects to be built in Kansas to export clean energy to states farther east.

Kansas has a rich history of exporting our products across the nation, and it has helped our economy grow. Now Kansas has the opportunity to export wind energy, but the existing transmission grid is limiting our ability to do so. The Grain Belt Express Clean Line offers a solution that will enable us to export wind energy to larger markets to the East. The project will spur billions of dollars in new investments in Kansas, increase economic development, and create thousands of jobs.

The Grain Belt Express Clean Line team is developing the project in a transparent and responsible way. They have been proactive, holding meetings with environmental agencies and hundreds of community members to seek input on routing throughout the development process.

I support the Grain Belt Express Clean Line and urge you to provide the regulatory approvals required to move the project forward.

Date:

Dear Commissioners:

I am writing to express my support for the Grain Belt Express Clean Line. The United States has some of the best wind resources in the world, making it possible to obtain a sizable portion of our energy from a clean, domestic resource. However, there are thousands of megawatts of projects stranded in development that cannot be built due to insufficient transmission infrastructure. The challenge lies in connecting abundant, low-cost, renewable resources to communities that need the power with an efficient transmission solution.

Clean Line Energy is developing projects to address this challenge. The Grain Belt Express Clean Line will create thousands of temporary jobs, enable construction of more than 3,500 megawatts of low-cost, clean energy, and deliver enough electricity to power more than 1.4 million American homes.

I support the Grain Belt Express Clean Line and urge you to provide the regulatory approvals required to move the project forward.

The Grain Belt Express Clean Line offers a solution that will enable us to export wind energy to larger markets to the East. The project will spur billions of dollars in new investments in Kansas, increase economic development, and create thousands of jobs.

The Grain Belt Express Clean Line team is developing the project in a transparent and responsible way. They have been proactive, holding meetings with environmental agencies and hundreds of community members to seek input on routing throughout the development process.

I support the Grain Belt Express Clean Line and urge you to provide the regulatory approvals required to move the project forward.

Dear Kansas Corporation Commission:

I am writing to express support for the Grain Belt Express Clean Line, a high voltage transmission line that will enable more than 3,500 megawatts of new wind energy projects to be built in Kansas to export clean energy to states farther east.

Kansas has a rich history of exporting our products across the nation, and it has helped our economy grow. Now Kansas has the opportunity to export wind energy, but the existing transmission grid is limiting our ability to do so. The Grain Belt Express Clean Line offers a solution that will enable us to export wind energy to larger markets to the East. The project will spur billions of dollars in new investments in Kansas, increase economic development, and create thousands of jobs.

The Grain Belt Express Clean Line team is developing the project in a transparent and responsible way. They have been proactive, holding meetings with environmental agencies and hundreds of community members to seek input on routing throughout the development process.

I support the Grain Belt Express Clean Line and urge you to provide the regulatory approvals required to move the project forward.

Dear Commissioners:

I am writing to express my support for the Grain Belt Express Clean Line. The United States has some of the best wind resources in the world, making it possible to obtain a sizable portion of our energy from a clean, domestic resource. However, there are thousands of megawatts of projects stranded in development that cannot be built due to insufficient transmission infrastructure. The challenge lies in connecting abundant, low-cost, renewable resources to communities that need the power with an efficient transmission solution.

Clean Line Energy is developing projects to address this challenge. The Grain Belt Express Clean Line will create thousands of temporary jobs, enable construction of more than 3,500 megawatts of low-cost, clean energy, and deliver enough electricity to power more than 1.4 million American homes.

I support the Grain Belt Express Clean Line and urge you to provide the regulatory approvals required to move the project forward.

Dear Kansas Corporation Commission:

I am writing to express support for the Grain Belt Express Clean Line, a high voltage transmission line that will enable more than 3,500 megawatts of new wind energy projects to be built in Kansas to export clean energy to states farther east.

Kansas has a rich history of exporting our products across the nation, and it has helped our economy grow. Now Kansas has the opportunity to export wind energy, but the existing transmission grid is limiting our ability to do so. The Grain Belt Express Clean Line offers a solution that will enable us to export wind energy to larger markets to the East. The project will spur billions of dollars in new investments in Kansas, increase economic development, and create thousands of jobs.

The Grain Belt Express Clean Line team is developing the project in a transparent and responsible way. They have been proactive, holding meetings with environmental agencies and hundreds of community members to seek input on routing throughout the development process.

I support the Grain Belt Express Clean Line and urge you to provide the regulatory approvals required to move the project forward.

I am writing to express support for the Grain Belt Express Clean Line, a high voltage transmission line that will enable more than 3,500 megawatts of new wind energy projects to be built in Kansas to export clean energy to states farther east.

Kansas has a rich history of exporting our products across the nation, and it has helped our economy grow. Now Kansas has the opportunity to export wind energy, but the existing transmission grid is limiting our ability to do so. The Grain Belt Express Clean Line offers a solution that will enable us to export wind energy to larger markets to the East. The project will spur billions of dollars in new investments in Kansas, increase economic development, and create thousands of jobs.

The Grain Belt Express Clean Line team is developing the project in a transparent and responsible way. They have been proactive, holding meetings with environmental agencies and hundreds of community members to seek input on routing throughout the development process.

I support the Grain Belt Express Clean Line and urge you to provide the regulatory approvals required to move the project forward.

Dear Commissioners:

I am writing to express my support for the Grain Belt Express Clean Line. The United States has some of the best wind resources in the world, making it possible to obtain a sizable portion of our energy from a clean, domestic resource. However, there are thousands of megawatts of projects stranded in development that cannot be built due to insufficient transmission infrastructure. The challenge lies in connecting abundant, low-cost, renewable resources to communities that need the power with an efficient transmission solution.

Clean Line Energy is developing projects to address this challenge. The Grain Belt Express Clean Line will create thousands of temporary jobs, enable construction of more than 3,500 megawatts of low-cost, clean energy, and deliver enough electricity to power more than 1.4 million American homes.

I support the Grain Belt Express Clean Line and urge you to provide the regulatory approvals required to move the project forward.

Dear Kansas Corporation Commission:

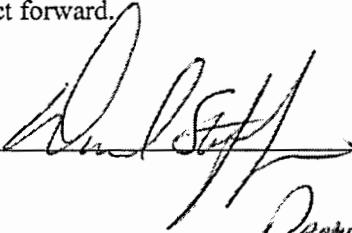

I am writing to express support for the Grain Belt Express Clean Line, a high voltage transmission line that will enable more than 3,500 megawatts of new wind energy projects to be built in Kansas to export clean energy to states farther east.

Kansas has a rich history of exporting our products across the nation, and it has helped our economy grow. Now Kansas has the opportunity to export wind energy, but the existing transmission grid is limiting our ability to do so. The Grain Belt Express Clean Line offers a solution that will enable us to export wind energy to larger markets to the East. The project will spur billions of dollars in new investments in Kansas, increase economic development, and create thousands of jobs.

The Grain Belt Express Clean Line team is developing the project in a transparent and responsible way. They have been proactive, holding meetings with environmental agencies and hundreds of community members to seek input on routing throughout the development process.

I support the Grain Belt Express Clean Line and urge you to provide the regulatory approvals required to move the project forward.

Dear Kansas Corporation Commission:

I am writing to express support for the Grain Belt Express Clean Line, a high voltage transmission line that will enable more than 3,500 megawatts of new wind energy projects to be built in Kansas to export clean energy to states farther east.

Kansas has a rich history of exporting our products across the nation, and it has helped our economy grow. Now Kansas has the opportunity to export wind energy, but the existing transmission grid is limiting our ability to do so. The Grain Belt Express Clean Line offers a solution that will enable us to export wind energy to larger markets to the East. The project will spur billions of dollars in new investments in Kansas, increase economic development, and create thousands of jobs.

The Grain Belt Express Clean Line team is developing the project in a transparent and responsible way. They have been proactive, holding meetings with environmental agencies and hundreds of community members to seek input on routing throughout the development process.

I support the Grain Belt Express Clean Line and urge you to provide the regulatory approvals required to move the project forward.

Dear Kansas Corporation Commission:

I am writing to express support for the Grain Belt Express Clean Line, a high voltage transmission line that will enable more than 3,500 megawatts of new wind energy projects to be built in Kansas to export clean energy to states farther east.

Kansas has a rich history of exporting our products across the nation, and it has helped our economy grow. Now Kansas has the opportunity to export wind energy, but the existing transmission grid is limiting our ability to do so. The Grain Belt Express Clean Line offers a solution that will enable us to export wind energy to larger markets to the East. The project will spur billions of dollars in new investments in Kansas, increase economic development, and create thousands of jobs.

The Grain Belt Express Clean Line team is developing the project in a transparent and responsible way. They have been proactive, holding meetings with environmental agencies and hundreds of community members to seek input on routing throughout the development process.

I support the Grain Belt Express Clean Line and urge you to provide the regulatory approvals required to move the project forward.

Dear Kansas Corporation Commission:

I am writing to express support for the Grain Belt Express Clean Line, a high voltage transmission line that will enable more than 3,500 megawatts of new wind energy projects to be built in Kansas to export clean energy to states farther east.

Kansas has a rich history of exporting our products across the nation, and it has helped our economy grow. Now Kansas has the opportunity to export wind energy, but the existing transmission grid is limiting our ability to do so. The Grain Belt Express Clean Line offers a solution that will enable us to export wind energy to larger markets to the East. The project will spur billions of dollars in new investments in Kansas, increase economic development, and create thousands of jobs.

The Grain Belt Express Clean Line team is developing the project in a transparent and responsible way. They have been proactive, holding meetings with environmental agencies and hundreds of community members to seek input on routing throughout the development process.

I support the Grain Belt Express Clean Line and urge you to provide the regulatory approvals required to move the project forward.

Dear Kansas Corporation Commission:

I am writing to express support for the Grain Belt Express Clean Line, a high voltage transmission line that will enable more than 3,500 megawatts of new wind energy projects to be built in Kansas to export clean energy to states farther east.

Kansas has a rich history of exporting our products across the nation, and it has helped our economy grow. Now Kansas has the opportunity to export wind energy, but the existing transmission grid is limiting our ability to do so. The Grain Belt Express Clean Line offers a solution that will enable us to export wind energy to larger markets to the East. The project will spur billions of dollars in new investments in Kansas, increase economic development, and create thousands of jobs.

The Grain Belt Express Clean Line team is developing the project in a transparent and responsible way. They have been proactive, holding meetings with environmental agencies and hundreds of community members to seek input on routing throughout the development process.

I support the Grain Belt Express Clean Line and urge you to provide the regulatory approvals required to move the project forward.
