MAY 0 3 2013

BEFORE THE STATE CORPORATION COMMISSION OF THE STATE OF KANSAS

State Corporation Commission of Kansas

In the Matter of the Application of Westar)	
Energy, Inc. for a Siting Permit for the)	
Construction of a 345 kV Transmission Line)	Docket No. 13-WSEE-676-MIS
in Saline and Ottawa Counties, Kansas.)	

APPLICATION

COMES NOW Westar Energy, Inc. (Westar) pursuant to K.S.A. 66-1,178, et seq., and any other applicable statutes, rules and/or regulations, and files this Application with the State Corporation Commission of the State of Kansas (Commission or KCC) for a siting permit granting Westar the right to construct a 345 kV transmission line from Westar's Summit Substation to an interconnection point near Justice Road in Ottawa County. In support of this Petition, Westar states:

- 1. Westar is a corporation duly incorporated under the laws of the State of Kansas and is engaged, among other things, in the business of an electric public utility, as defined by K.S.A. 66-104, in legally designated areas within the State of Kansas. Westar holds certificates of convenience and authority issued by this Commission authorizing it to engage in such utility business. Westar does business under the name "Westar Energy."
- 2. Westar provides electric service at retail throughout Kansas to approximately 687,000 customers. Westar also provides wholesale service to 22 municipalities and cooperatives that provide retail service to additional Kansas customers. Westar currently has over 7,000 megawatts of electric generation capacity and operates and coordinates approximately 34,000 miles of electric distribution and transmission lines.
- 3. In this Application, Westar seeks a siting permit authorizing it to construct a new, approximately 29 mile long, 345 kV transmission line from Westar's Summit Substation located

southeast of Salina, Kansas to an interconnection point near Justice Road in central Ottawa County. This line will connect with a 345 kV line to be constructed by ITC Great Plains, LLC (ITC). ITC's portion of the line will terminate at its Elm Creek Substation southeast of Concordia. These two line segments, along with necessary substation upgrades, constitute the Elm Creek to Summit project that has been authorized by the Southwest Power Pool, Inc. (SPP).

4. Support for the filing is provided in the testimony of the following witnesses:

Kelly B. Harrison

Overview and Policy

Dennis L. Reed

Need for the line and the cost recovery

mechanism for the line

Salvatore Falcone, Black & Veatch

Process used to determine the preferred

route

5. In addition to undersigned counsel, the names, addresses and telephone numbers of Westar's representatives upon whom all notices, pleadings, correspondence, and other documents regarding this Application should be served are as follows:

Jeff L. Martin Vice President, Regulatory Affairs P.O. Box 889 818 S. Kansas Avenue Topeka, Kansas 66601 (785) 575-6362 jeff.martin@westarenergy.com Kelly B. Harrison Vice President, Transmission P.O. Box 889 818 S. Kansas Avenue Topeka, Kansas 66601 (785) 575-1636 kelly.harrison@westarenergy.com

- 6. The SPP has designated the Elm Creek to Summit project as a base plan project needed to address voltage collapse in the Concordia area under contingency conditions. A group of Network Upgrade projects, including the Elm Creek to Summit project, was approved by the SPP Board of Directors as part of 2012 Integrated Transmission Planning 10-Year (ITP10) Assessment on January 31, 2012.
- 7. The proposed line is expected to significantly improve reliability in the region facilitating the import and export of power to and from north central Kansas. The additional transmission capacity will support economic growth in the region, benefiting Westar's customers and other customers in Kansas. The proposed line will also provide needed additional capacity to move power from wind farms located in remote areas to load centers and help facilitate the development of wind generation in the state of Kansas. Increased wind generation will result in lower air emissions because such assets will generate electricity with no emissions and reduce the need for generation using traditional coal and natural gas fired assets.
- 8. Westar currently estimates that it will cost approximately \$66 million to construct its portion of the proposed line. This is a preliminary estimate based on current costs of labor and materials and the cost to acquire needed right of way. The actual costs of construction may differ from this estimate and will be affected by, among other things, the final route selected, structure design, changes in commodity prices and labor rates.
- 9. The proposed line will provide significant savings to electric customers both inside and outside of Kansas and economic development benefits in Kansas. SPP is filing testimony shortly after Westar's filing of this Application in order to present the benefit-cost analysis it conducted with respect to this project and the other ITP10 projects. SPP estimates that, on a net present value basis, ITP10 projects, including Westar's proposed line, will generate

approximately \$834 million in net savings for customers in the SPP region over their expected 40 year life. As a result of the portfolio, the average residential customer in SPP will see a decrease in his or her monthly electric bill of 34 cents. SPP will discuss this analysis in greater detail in its testimony to be filed in this docket.

- 10. Westar selected the route after a series of open houses through which it received input from landowners and residents in the areas along potential routes. Westar also sought and received input from state and federal agencies and public interest groups. All of the information received from these contacts was used to identify a route that minimizes adverse social and environmental impacts of the line. Mr. Falcone's testimony describes the route selection process in detail.
- 11. Westar will submit a wire stringing application pursuant to K.S.A. 66-183 and K.A.R. 82-12-1, et seq., after design of the line is complete.

Proposed Facilities

Overview of project

- 12. Westar is proposing to construct the south half of the Elm Creek to Summit line. Westar's portion will be a single circuit 345 kV transmission line from Westar's Summit Substation to an interconnection point near Justice Road in central Ottawa County where it will connect to a new single circuit 345 kV line to be constructed by ITC from the interconnection point to Elm Creek Substation. Westar's project would also involve the addition of 345 kV facilities at the Summit Substation.
- 13. The length of Westar's proposed line will be approximately 29 miles. Appendix B in Exhibit 1 of Mr. Falcone's testimony is a map showing the proposed line, route, and existing facilities. The line will cross portions of Saline and Ottawa Counties.

Transmission Facilities

- 14. The transmission line will be constructed using either tubular steel "H-Frame" structures commonly seen in rural areas of Kansas or single pole tubular steel structures. The structures will be spaced approximately 600 to 1200 feet apart. The poles for each individual H-frame structure will be approximately 27 feet apart. H-frame structures and single pole structures may be either directly embedded using a crushed rock backfill or may utilize a concrete pier foundation. The minimum ground clearance for the 345 kV circuit will be above that required by the National Electric Safety Code.
- 15. Drawings of typical single-circuit, H-frame and single pole structures are provided in Exhibit KBH-3. The height of the structures will vary depending on span length, required clearances, and local terrain, but will typically range between 100 and 160 feet.
- 16. The proposed line will be constructed using aluminum, steel-reinforced (ACSR) conductors, 1590 KCM-ACSR 45/7 (Code Name "Lapwing") conductor. This conductor is constructed of 45 strands of aluminum wrapped around 7 steel strands with an overall diameter of 1.502 inches. This line will utilize a two-conductor bundle for each of the three phases. The two conductors in each bundle will be approximately 18 inches apart and will be arranged in a horizontal bundle. In a conductor of this type, the aluminum strands carry the load current; the mechanical strength to support the conductors is provided by the steel core. Non-ceramic suspension insulators will be used to suspend the bundled phase conductors.
- 17. The line will be protected from lightning by overhead shield wires strung at the uppermost extremity of the supports. One shield wire will be an optical ground wire composed of ten strands of aluminum-coated steel (alumoweld) wire wrapped around a centrally located

aluminum alloy pipe that contains the optical fibers. The optical fibers will be used as a communications medium for line protective relaying and for internal communications.

- 18. Non-electric wire fence within a distance of 150 feet from the center of the right-of-way will be grounded at intervals to limit the electromagnetically induced levels of static charges to safe levels. Fences that cross the line route will be grounded at both edges of the right-of-way. Electric fences will be grounded where necessary with the addition of a 60 Hz series filter at each grounding location. Permanently installed metallic objects within 150 feet of the outside phase conductor of the line will be grounded. Conductor minimum ground clearance will be chosen to limit induced voltage in ungrounded metallic objects (such as a vehicle parked near the line) to a value that keeps induced current to less than 5 milliamperes.
- 19. A minimum horizontal clearance distance of 50 feet from the closest phase of the line to existing dwellings will be maintained wherever possible. Construction of the line will consist of right-of-way clearing, structure assembly, structure erection, stringing and tensioning of conductors and shield wires, energizing the line, and cleanup/re-vegetation. Timber within the right-of-way will be removed or trimmed as necessary to assure reliability and safety of the line. All conductors and shield wires will be tension strung. Use of this method will ensure that the conductor will not touch the ground or other objects during construction. Care in handling the conductor will keep its surface smooth, thereby minimizing corona and associated radio-TV interference and audible noise.
- 20. Structures will be assembled in the field. Tangent structures will be unguyed. Heavy angles and dead ends will be self-supported steel structures. The construction crew will

¹ This system involves stringing a rope between structures for each conductor and shield wire. The rope pulls a steel cable, which in turn strings the electrical conductor through neoprene-lined stringing blocks to protect the conductor from abrasion.

be composed of approximately 50 to 75 workers using equipment that includes hole diggers, cranes, stringing rigs, conductor tensioners, back hoes, trucks, cars and other items.

- 21. Construction equipment and other vehicles will travel along the right-of-way, where possible, and the need for access roads to the work areas will be minimal. Cut and fill operations to facilitate construction activities will not be required for this project. Westar will apply for a construction activity, National Pollutant Discharge Elimination System (NPDES) permit from the Kansas Department of Health and Environment (KDHE) pursuant to the provisions of K.S.A. 65-164 and 65-165, and the Federal Water Pollution Control Act as amended, 33 U.S.C. 1251 et seq.
- 22. Before construction begins, a storm water pollution prevention plan (SWPPP) will be developed and submitted to KDHE. The purpose of the SWPPP is to ensure the design, implementation, management, and maintenance of "best management practices" (BMPs) in order to reduce the amount of sediment and other pollutants in storm water runoff from the construction site. Westar, its representative, and/or the contractor(s) responsible for installation, operation, and maintenance of the BMPs will have a current copy of the SWPPP with them during construction. The construction site will be inspected on a regular schedule and within 24 hours after a storm event of one-half inch or more. A report of each inspection will be prepared, and KDHE will be notified when final stabilization of the site is complete.
- 23. Westar will inspect the construction and clean-up operations to assure compliance with specifications and standard procedures. Maintenance inspections will be performed by walking, driving or flying along the line routes.

Right-of-Way Requirements

- 24. The nominal width of the right-of-way will be 150 feet. However, the right-of-way could be more or less in specific areas depending on span length, conductor sag and wind characteristics. Where the line is adjacent to a road, the structures would be offset from the road centerline, thus reducing the width of the new right-of-way by the distance from the edge of the road right-of-way to the road centerline. In this case, the structures would be placed so that the centerline of the structures is located behind the edge of the road right-of-way.
- 25. Landowners will be able to use the right-of-way for any agricultural purpose that does not interfere with use of the line at full rated capacity. However, landowners will not be permitted to conduct business in the right-of-way that would be hazardous to the landowner, the line, or to the general public (such as a pipe storage yard or tree farm). No foreign structures will be permitted in any part of the right-of-way. Trees and brush in the right-of-way will be trimmed or removed. Herbicides will be used to control woody vegetation and re-growth of trees and brush in the right-of-way except in the case of certified organic farms or similar situations.
- 26. Easements will be procured from landowners prior to construction. Landowners will be compensated for all damages including crop losses that are directly attributable to construction.

Project Schedule

- 27. Depending on how long it takes to acquire right-of-way, Westar anticipates that construction of its proposed project will be completed by December 31, 2016.
- 28. Surveying and design work associated with the acquisition of easements would be done in conjunction with acquiring the easements. Upon approval of this Application, these activities would begin in late 2013. Construction activities on the right-of-way, including

vegetation clearing, would take approximately 16 months beginning in August 2014, if right-ofway can be acquired in time.

Siting and Environmental

29. A description of siting activities and Westar's approach to issues surrounding siting, such as environmental issues, is provided in Mr. Falcone's testimony.

Landowner List

30. A list with the names and addresses of the landowners of record whose land or interest therein is proposed to be acquired in connection with the construction of the proposed line or is located within 1000 feet of the center line of the easement where the line is proposed to be located is included with this application as Attachment 1.²

WHEREFORE, Westar requests that the Commission issue its order authorizing Westar to site and construct the proposed transmission line and for such other and further relief as may be appropriate.

Respectfully submitted,

Westar Energy, Inc.

Cathryn J. Dinges, #20848 Senior Corporate Counsel 818 South Kansas Avenue Topeka, Kansas 66612

(785) 575-1986; Telephone

(785) 575-8136; Fax

ITS ATTORNEY

² K.S.A. 66-1,178 requires the applicant to specify "the names and addresses of the landowners of record whose land or interest therein is proposed to be acquired in connection with the construction of or is located within 660 feet of the center line of the easement where the line is proposed to be located." In its route selection process, Westar identified landowners within 1000 feet of the proposed line in order to have a better assurance that affected landowners would be identified and have an opportunity to provide input concerning location of the line. The list provided in Attachment 1 therefore exceeds the requirement of K.S.A. 66-1,178.

VERIFICATION

STATE OF KANSAS)	
)	ss:
COUNTY OF SHAWNEE)	

Cathryn J. Dinges, of lawful age, being first duly sworn upon oath, deposes and states: That she is the attorney for the within named applicant, that she has read the above and foregoing application, and that the statements therein contained are true according to her knowledge and belief.

Cathryn J. Dinges

SUBSCRIBED AND SWORN to before me this 3 and day of May, 2013.
