Mr. Stucky –

18-cons-3195-CUIC

Regarding your letter of Oct. 27, I do feel a hearing should be scheduled about the waste-water injection wells proposed on the Thatcher and Hadl sites in Douglas County, Kansas. If and when it is, I plan on participating.

Given the many unknowns surrounding the effects of waste-water injection, of course a hearing should be scheduled, and with proper notice to all county residents and government entities.

I live two miles west of the proposed sites, and have concerns about both groundwater contamination and possible earthquakes, especially given the fact that the sites in question sit only about eight miles from a known fault line.

Sincerely,

James Vail
