JTC Oil Inc. permit for injection of Blunk I-10, I-11, Sec. 18-17S-21E, Franklin Co., KS

Dear Mr. Stucky,

I would like a hearing scheduled in the matter of the above mentioned permit and do anticipate participating in said hearing.

I am concerned that approving the above mentioned injection permit without further consideration would endanger citizens of Kansas.

The Blunk I-10 well is very close to the Marais des Cygnes River and near several water intakes for Rural Water #6 of Franklin County, Kansas. Over time it is likely that spills or leaks of hazardous products into the watershed will occur. In looking at lists of old nearby wells that need remediation, I count 25 Priority 1 Level C wells and 15 Priority 1 Level B wells. Forcing produced waters/brine down wells near these problem wells does not suggest good stewardship of our water resources. I suggest all necessary remediation the the area be completed and a detailed survey of additional need for the remediation be undertaken before this permit or any other permit for injection be permitted in this area.

Thank you,
Polly Shteamer
