STATE CORPORATION COMMISSION

UEU 1 6 199€

Docket Boom

Mr. Dave Dittemore Director of the Utilities Division Kansas Corporation Commission 1500 S. W. Arrowhead Road

Topeka, KS 66604

Dear Mr. Dittemore:

Enclosed with this letter are six copies of Sunflower's responses to the Questions for Kansas Electric Utilities Belonging to SPP pursuant to the Commission's Order in Docket 99-GIME-321 -GIG.

If you need additional information please contact me.

Sincerely,

Canon Wagon

C. L. Waggoner

Sr. Manager Power Marketing

& Regulation

APPENDIX A

UEU 1 6 1998

Questions for Kansas Electric Utilities Belonging to SPP

- I) Please provide the following information related to the Summer Net Internal Demand forecasts given for the years 1998 through 2007 on the most recent 1998 SPP EA1411 report:
 - a) A list of interruptible customers, their estimated demand (as it correlates to their contribution to the EIA411 interruptible total), the expiration date of their current contract (or tariff), any provisions to allow the customer to buy through interruption, and notification requirement prior to interruption

Response: Sunflower does not currently have any customers that are interruptible. Sunflower's is not aware of interruptible customers on our members' distribution systems.

b) Do you anticipate any interruptible retail customers converting to full requirements retail customers? If yes, provide an estimate of the total demand involved.

Response: See response to 1)a) above.

c) A list of all days and the corresponding demand for the Summer of 1998 that exceeded the 1998 forecast.

Response: See Attachment A.

d) A discussion of how 1998 Summer demands may affect future demand forecasts.

Response: See Attachment B for table and written response.

e) Estimate of annual peak Summer demand growth in percentage and how this estimate was derived.

Response: See Attachment B for table and written response.

f) Describe any other adjustments made to internal demand to arrive at net internal demand for each forecast year.

Response: See Attachment B for table and written response.

- II) Please provide the following information related to the Summer Net Capacity Resource forecasts given for the years 1998 through 2007 on the most recent 1998 SPP EAI411 report:
 - a) A list of all generating units included in the total for net operable capacity in each forecast year. Include rating and capacity for each unit.

Response: See Attachment C.

b) Capacity, type, fuel and planned operation date for each unit added after 1998 in forecast.

Response: Sunflower will re-start the S-2 unit located in Garden City, Kansas. The rating of the unit is anticipated to be 95 to 110 MW and is a gas fired steam unit. The projected date for the re-start of the unit is April 4, 1999.

c) Capacity, and year for each unit forecasted for retirement or determined to be inoperable in planning period. Describe unit and reason for listing as inoperable or retiring.

Response: Sunflower, for the planning period, does not forecast the retirement of any units.

d) A list of wholesale full responsibility sales by customer, capacity and forecast year. Include year contract expires.

Response: See Attachment D.

e) A list of wholesale full responsibility purchases by seller, capacity and forecast year. Include year contract expires.

Response: Sunflower does not project the purchase of capacity from other sellers.

f) A list of capacity sales by customer, capacity and forecast year. Include year contract expires and describe whether sale is from a designated unit or from system.

Response: See Attachment E.

g) A list of capacity purchases by seller, capacity and forecast year. Include year contract expires and describe whether purchase is from a designated unit or from seller's system.

Response: Sunflower has not forecasted the purchase of capacity from other sellers.

h) Describe any other adjustments made to net operable capacity to arrive at planned capacity resources for each forecast year.

Response: None.

Sunflower Electric Power Corporation 1998 MOKAN Capability Ratings

c) Listed below is a table with the date and time the actual peak exceeded the 1998 forecast for Jun-Sep.

- d) The Summer of 1998 Actual CP values for all firm power delivered was actually slightly less than forecasted in the 1998 Budget by -0.3% as shown in the table above. Growth that occurred in the 1998 over 1997 of 44 MWs is mainly from an additional single large consumer load of 42 MWs.
- e) The annual peak Summer demands are estimated based on monthly average load factors and coincident peak factors applied to a detailed kWh sales forecast in each member system's RUS power requirements study. Any significant large power contract is forecasted independently and segmented from all other loads. Weather normalization is achieved by applying econometric modeling to weather related loads using 30 year norms for cooling/heating degree days and precipitation data. The system peak forecast is based on historical losses applied to the estimated peaks for firm power delivered. With the additional commercial loads after 1999 the average expected growth is 1.4% for 2000 through 2007.
- f) There are no other adjustments. \hys\sys\office\clwfiles\drequest\Spp
