

BEFORE THE STATE CORPORATION COMMISSION  
OF THE STATE OF KANSAS

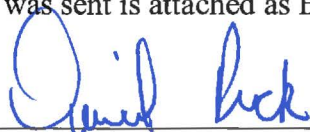

In the Matter of the Application of Westar )  
Energy, Inc. for a Siting Permit for the )  
Construction of a 345 kV Transmission ) Docket No. 15-WSEE-365-MIS  
Line in Riley and Pottawattamie Counties, )  
Kansas. )

**AFFIDAVIT OF PUBLICATION**

David Peck, being first duly sworn, deposes and says:

1. I am Transmission and Substation Construction Project Manager for Westar Energy, Inc. (Westar).

2. On March 2, 2015, I had letters sent by certified mail to owners of record of property located within 1000 feet of the transmission line as proposed by Westar in its Application in the above-captioned docket. A copy of such letter is attached hereto as Exhibit 1 and a copy of the list of landowners to whom the letter was sent is attached as Exhibit 2.

  
\_\_\_\_\_  
David Peck

SUBSCRIBED AND SWORN to before me this 11th day of March, 2015.

  
\_\_\_\_\_  
Notary Public Sheila Townsend

My Appointment Expires:

6-15-2016

## Exhibit 1

February 27, 2015

Dear Property Owner:

Recently, Westar Energy let you know that we selected a transmission line route that is on or near your property. Public participation and input is an important part of the siting process. I'm writing to let you know how to provide input during the formal process carried out by the Kansas Corporation Commission, which will ultimately determine the route of the line.

On February 20, 2015, Westar Energy, Inc. (Westar) filed a siting permit application with the Kansas Corporation Commission (KCC) because we need to rebuild an existing 230 kilovolt transmission line from Westar's Jeffrey Energy Center (JEC) Substation, northwest of St. Marys, to Westar's East Manhattan Substation, near Manhattan. The new transmission line will be engineered and constructed to 345 kilovolt standards, but will continue to be operated at 230 kilovolts until some time in the future. The Commission will review the application and the proposed location of the replacement line.

As an owner of land near the route submitted to the KCC, we are providing you a copy of the public hearing notice and the application we submitted to the KCC. Under state law these documents must be provided to affected landowners by certified mail. Other documents related to this filing are available from the KCC website, <http://www.kcc.ks.gov>, by searching for Docket No. 15-WSEE-365-MIS.

**The KCC will conduct a public hearing at 6 p.m. Tuesday, March 24, 2015, at Wamego High School, 801 Lincoln, Wamego, KS.** Westar will have representatives available at this location at 4 p.m. to answer any questions you have about the proposed route. The public hearing will take place in two parts. First, a question and answer period will allow residents to ask KCC staff and Westar representatives questions about the project. In the second part of the hearing, attendees may make formal statements to the KCC Commissioners. These statements will become part of the documentation the Commission considers while making its decision.

Comments may also be submitted to the KCC by mail to Kansas Corporation Commission, Office of Public Affairs and Consumer Protection, 1500 S.W. Arrowhead Rd., Topeka, KS 66604 or by e-mail to [public.affairs@kcc.ks.gov](mailto:public.affairs@kcc.ks.gov). The deadline for public comments is April 1, 2015.

Westar has selected a preferred route as identified in the documents submitted to the KCC. When referencing areas of the proposed route, it's important to use landmarks, street names, etc. to make it easy to identify the area of concern. Individual landowners and groups of landowners may suggest alternate routes to the KCC for consideration. These alternate routes might have more or less impact on your property than the route proposed by Westar.

An evidentiary hearing where Commission staff, Westar representatives, and interveners will present their information regarding the project to the Commission will begin at 9 a.m. on May 6, 2015, in the first floor hearing room at the Kansas Corporation Commission, 1500 S.W. Arrowhead Road, Topeka, Kansas. The format of this hearing is similar to a legal hearing and participants must have formal permission to intervene. The evidentiary hearing is open to the public and everyone is welcome to attend.

The Commission may approve our preferred route, may approve our route subject to modifications, or may deny our request. The Commission must issue a decision by June 19, 2015. Westar will send you additional information that outlines the Commission's decision shortly after this date.

If you have any questions or concerns about the selected route, please call David Peck at (785) 575-8146 or [david.peck@westarenergy.com](mailto:david.peck@westarenergy.com). He will do his best to answer your questions or direct you to the proper department to have them answered.

Sincerely,

A handwritten signature in black ink that reads "Kelly B. Harrison".

Kelly B. Harrison  
Westar Energy, Inc.  
Vice-President, Transmission

Enclosures

## NOTICE OF PUBLIC HEARING

Westar Energy, Inc. (Westar) has filed an application with the Kansas Corporation Commission (Commission) requesting to rebuild a transmission line from Westar's Jeffrey Energy Center (JEC) Substation, northwest of St. Mary's, to Westar's East Manhattan Substation, near Manhattan. The new transmission line will be engineered and constructed to 345 kilovolt standards, but will continue to be operated at 230 kilovolts until some time in the future. The Commission will review the application and the proposed location of the replacement line.

### **Public Hearing and Opportunities for Public Comment**

The Commission has scheduled a public hearing concerning this siting request, inviting the public to testify before the Commission. The public hearing will consist of a presentation on the proposed route and an opportunity for landowners to make official comment to the Commission. These comments will become part of the documentation the Commission considers while making its decision. The public hearing will begin at 6 p.m. March 24, 2015, at Wamego High School, 801 Lincoln, Wamego, Kansas. In addition, Westar will have staff on-site beginning at 4 p.m. to answer any questions landowners may have about the proposed route.

Written comments may be sent to the Commission through April 1, 2015. Comments regarding the case should reference Docket No. 15-WSEE-365-MIS and should be sent to the Kansas Corporation Commission Office of Public Affairs and Consumer Protection, 1500 S.W. Arrowhead Road, Topeka, Kansas 66604-4027. Comments may also be submitted by emailing [public.affairs@kcc.ks.gov](mailto:public.affairs@kcc.ks.gov) or by calling 1-800-662-0027. When referencing areas of the proposed route, it is important to use landmarks, street names, etc. to make it easy to identify the area of concern.

### **Evidentiary Hearing**

An evidentiary hearing where Commission staff, Westar representatives, and interveners will present their information regarding the project to the Commission will begin at 9 a.m. May 6, 2015, in the first floor hearing room at the Kansas Corporation Commission, 1500 S.W. Arrowhead Road, Topeka, Kansas. This hearing is open to the public.

### **Westar's Transmission Line Proposal**

The new transmission line will replace the existing 230 kilovolt transmission line that was built in the 1980s and connects the Jeffrey Energy Center Substation to the East Manhattan Substation. The new transmission line will be designed and constructed to 345 kilovolt specifications but will continue to operate at 230kV until additional upgrades are warranted. No significant upgrades are necessary at the substations located on each end of the transmission line. Once the new line is energized, the existing 230kV line will be removed.

The Commission must issue a decision by June 19, 2015. With the Commission's approval, Westar would begin working with affected landowners to acquire easements in late 2015. Construction would take about 19 months beginning in November 2015, if right-of-way can be acquired in time. The project is scheduled to be completed by June 2017.

### **Additional Information Available**

For more information about the proposed project, public hearing or evidentiary hearing, contact the Kansas Corporation Commission Office of Public Affairs and Consumer Protection at 1-800-662-0027. Anyone requiring special accommodations under the Americans with Disabilities Act is asked to contact the Commission at least 10 days before the scheduled hearing date.

BEFORE THE STATE CORPORATION COMMISSION  
OF THE STATE OF KANSAS

In the Matter of the Application of Westar     )  
Energy, Inc. for a Siting Permit for the     )  
Construction of a 345 kV Transmission Line     ) Docket No. 15-WSEE-365-MIS  
in Riley and Pottawatomie Counties,     )  
Kansas.

APPLICATION

COMES NOW Westar Energy, Inc. (Westar) pursuant to K.S.A. 66-1,178, et seq., and any other applicable statutes, rules and/or regulations, and files this Application with the State Corporation Commission of the State of Kansas (Commission or KCC) for a siting permit granting Westar the right to construct a 345 kV transmission line from Westar's Jeffrey Energy Center Substation to Westar's East Manhattan Substation, located near Manhattan, Kansas. In support of this Petition, Westar states:

1. Westar is a corporation duly incorporated under the laws of the State of Kansas and is engaged, among other things, in the business of an electric public utility, as defined by K.S.A. 66-104, in legally designated areas within the State of Kansas. Westar holds certificates of convenience and authority issued by this Commission authorizing it to engage in such utility business. Westar does business under the name "Westar Energy."

2. In this Application, Westar seeks a siting permit authorizing it to construct a new, 345 kV transmission line from Westar's Jeffrey Energy Center (JEC) Substation to Westar's East Manhattan Substation, located near Manhattan, Kansas to replace the existing 230 kV line between those substations. The new transmission line will be engineered and constructed to 345 kV standards, but will continue to be operated at 230 kV until such time in the future that SPP authorizes operation at 345 kV.

3. Support for the filing is provided in the testimony of the following witnesses:

Kelly B. Harrison	Overview and Policy
Julie Lux	Need for the line and the cost recovery mechanism for the line
Kristi Wise, Burns & McDonnell, Inc.	Process used to determine the preferred route

4. In addition to undersigned counsel, the names, addresses and telephone numbers of Westar's representatives upon whom all notices, pleadings, correspondence, and other documents regarding this Application should be served are as follows:

Jeff L. Martin Vice President, Regulatory Affairs P.O. Box 889 818 S. Kansas Avenue Topeka, Kansas 66601 (785) 575-6362 jeff.martin@westarenergy.com	Kelly B. Harrison Vice President, Transmission P.O. Box 889 818 S. Kansas Avenue Topeka, Kansas 66601 (785) 575-1636 kelly.harrison@westarenergy.com
--	--

5. During its development of its Integrated Transmission Plan (ITP), the Southwest Power Pool (SPP) identified a reliability issue related to the existing 230 kV line between the JEC substation and the East Manhattan substation. Westar proposed construction of the 345 kV line that is the subject of this Application as a solution for the reliability problem identified by SPP and SPP included Westar's proposed solution as part of its Integrated Transmission Planning Near-Term (ITPNT) Assessment that was approved by the SPP Board of Directors on January 28, 2014.

6. The proposed line will address the reliability issue that currently exists with the 230 kV line between the JEC substation and East Manhattan substation and eliminate the risks associated with the overloading of that line. Those risks include having to reduce the output of

JEC to reduce loading on the line, causing Westar to have to purchase generation from other sources at higher costs.

7. Westar currently estimates that it will cost approximately \$58.3 million to construct the proposed line. This is a preliminary estimate based on current costs of labor and materials and the cost to acquire needed right of way. The actual costs of construction may differ from this estimate and will be affected by, among other things, the final route selected, structure design, changes in commodity prices and labor rates.

8. The proposed line will benefit electric customers both inside and outside of Kansas, ensuring continued access to low-cost power from JEC – one of Westar’s essential base load power plants. SPP is filing testimony shortly after Westar’s filing of this Application in order to present the results of the ITPNT Assessment.

9. Westar selected the route after a series of open houses through which it received input from landowners and residents in the areas along potential routes. Westar also sought and received input from state and federal agencies and public interest groups. All of the information received from these contacts was used to identify a route that minimizes adverse social and environmental impacts of the line. Ms. Wise’s testimony describes the route selection process in detail.

10. Westar will submit a wire stringing application pursuant to K.S.A. 66-183 and K.A.R. 82-12-1, *et seq.*, after design of the line is complete.

### **Proposed Facilities**

#### Overview of project

11. Westar is proposing to construct a single-circuit 345 kV transmission line from the JEC substation to the East Manhattan substation.

12. The length of Westar's proposed line will be approximately 25.6 miles. Exhibit KBH-1 to Mr. Harrison's testimony is a map showing the proposed line. The line will cross portions of Riley and Pottawatomie counties.

#### Transmission Facilities

13. The transmission line will be constructed using either tubular steel "H-Frame" structures or single pole tubular steel structures commonly seen in rural areas of Kansas. The structures will be spaced approximately 600 to 1200 feet apart. The poles for each individual H-frame structure will be approximately 27 feet apart. H-frame structures and single pole structures may be either directly embedded using a crushed rock backfill or may utilize a concrete pier foundation. The minimum ground clearance for the 345 kV circuit will be above that required by the National Electric Safety Code.

14. Drawings of typical single-circuit, H-frame and single pole structures are provided in Exhibit KBH-4. The height of the structures will vary depending on span length, required clearances, and local terrain, but will typically range between 80 and 160 feet.

15. The proposed line will be constructed using aluminum, steel-reinforced (ACSR) conductors, 1590 KCM-ACSR 45/7 (Code Name "Lapwing") conductor. This conductor is constructed of 45 strands of aluminum wrapped around 7 steel strands with an overall diameter of 1.502 inches. This line will utilize a two-conductor bundle for each of the three phases. The two conductors in each bundle will be approximately 18 inches apart and will be arranged in a horizontal bundle. In a conductor of this type, the aluminum strands carry the load current; the mechanical strength to support the conductors is provided by the steel core. Non-ceramic suspension insulators will be used to suspend the bundled phase conductors.

16. The line will be protected from lightning by overhead shield wires strung at the uppermost extremity of the supports. One shield wire will be an optical ground wire composed of ten strands of aluminum-coated steel (alumoweld) wire wrapped around a centrally located aluminum alloy pipe that contains the optical fibers. The optical fibers will be used as a communications medium for line protective relaying and for internal communications.

17. Non-electric wire fence within a distance of 150 feet from the center of the right-of-way will be grounded at intervals to limit the electromagnetically induced levels of static charges to safe levels. Fences that cross the line route will be grounded at both edges of the right-of-way. Electric fences will be grounded where necessary with the addition of a 60 Hz series filter at each grounding location. Permanently installed metallic objects within 150 feet of the outside phase conductor of the line will be grounded. Minimum ground clearance for the conductor will be chosen to limit induced voltage in ungrounded metallic objects (such as a vehicle parked near the line) to a value that keeps induced current to less than 5 milliamperes.

18. A minimum horizontal clearance distance of 50 feet from the closest phase of the line to existing dwellings will be maintained wherever possible. Construction of the line will consist of right-of-way clearing, structure assembly, structure erection, stringing and tensioning of conductors and shield wires, energizing the line, and cleanup/re-vegetation. Timber within the right-of-way will be removed or trimmed as necessary to assure reliability and safety of the line. All conductors and shield wires will be tension strung.<sup>1</sup> Use of this method will ensure that the conductor will not touch the ground or other objects during construction. Care in handling the

---

<sup>1</sup> This system involves stringing a rope between structures for each conductor and shield wire. The rope pulls a steel cable, which in turn strings the electrical conductor through neoprene-lined stringing blocks to protect the conductor from abrasion.

conductor will keep its surface smooth, thereby minimizing corona and associated radio-TV interference and audible noise.

19. Structures will be assembled in the field. Tangent structures will be unguyed. Heavy angles and dead ends will be self-supported steel structures. The construction crew will be composed of approximately 50 to 75 workers using equipment that includes foundation drilling equipment, cranes, stringing rigs, conductor tensioners, excavators, skid steers, trucks, cars and other items.

20. Construction equipment and other vehicles will travel along the right-of-way, where possible, and the need for access roads to the work areas will be minimal. Cut and fill operations to facilitate construction activities will not be required for this project. Westar will apply for a construction activity, National Pollutant Discharge Elimination System (NPDES) permit from the Kansas Department of Health and Environment (KDHE) pursuant to the provisions of K.S.A. 65-164 and 65-165, and the Federal Water Pollution Control Act as amended, 33 U.S.C. 1251 et seq.

21. Before construction begins, a storm water pollution prevention plan (SWPPP) will be developed and submitted to KDHE. The purpose of the SWPPP is to ensure the design, implementation, management, and maintenance of "best management practices" (BMPs) in order to reduce the amount of sediment and other pollutants in storm water runoff from the construction site. Westar, its representative, and/or the contractor(s) responsible for installation, operation, and maintenance of the BMPs will have a current copy of the SWPPP with them during construction. The construction site will be inspected on a regular schedule and within 24 hours after a storm event as listed in the approved permit. A report of each inspection will be prepared, and KDHE will be notified when final stabilization of the site is complete.

22. Westar will inspect the construction and clean-up operations to assure compliance with specifications and standard procedures. Maintenance inspections will be performed by walking, driving or flying along the line routes.

#### Right-of-Way Requirements

23. The nominal width of the right-of-way will be 150 feet. However, the right-of-way could be more or less in specific areas depending on span length, conductor sag and wind characteristics.

24. Landowners will be able to use the right-of-way for any agricultural purpose that does not interfere with use of the line at full rated capacity. However, landowners will not be permitted to conduct business in the right-of-way that would be hazardous to the landowner, the line, or to the general public (such as a pipe storage yard or tree farm). No foreign structures will be permitted in any part of the right-of-way. Trees and brush in the right-of-way will be trimmed or removed. Herbicides will be used to control woody vegetation and re-growth of trees and brush in the right-of-way except in the case of certified organic farms or similar situations.

25. Easements will be procured from landowners prior to construction. Landowners will be compensated for all damages including crop losses that are directly attributable to construction.

#### Project Schedule

26. Depending on how long it takes to acquire right-of-way, Westar anticipates that construction of its proposed project will be completed by June 2017.

27. Surveying and design work associated with the acquisition of easements would be done in conjunction with acquiring the easements. Upon approval of this Application, these activities would begin in late June 2015. Construction activities on the right-of-way, including

vegetation clearing, would take approximately 19 months beginning in November 2015, if right-of-way can be acquired in time.

### **Siting and Environmental**

28. A description of siting activities and Westar's approach to issues surrounding siting, such as environmental issues, is provided in Ms. Wise's testimony.

### **Landowner List**

29. A list with the names and addresses of the landowners of record whose land or interest therein is proposed to be acquired in connection with the construction of the proposed line or is located within 1000 feet of the center line of the easement where the line is proposed to be located is included with this application as Attachment 1.<sup>2</sup>

WHEREFORE, Westar requests that the Commission issue its order authorizing Westar to site and construct the proposed transmission line and for such other and further relief as may be appropriate.

Respectfully submitted,

Westar Energy, Inc.

  
Cathryn J. Dinges, #20848  
Senior Corporate Counsel  
818 South Kansas Avenue  
Topeka, Kansas 66612  
(785) 575-8344; Telephone  
(785) 575-8136; Fax

ITS ATTORNEY

---

<sup>2</sup> K.S.A. 66-1,178 requires the applicant to specify "the names and addresses of the landowners of record whose land or interest therein is proposed to be acquired in connection with the construction of or is located within 660 feet of the center line of the easement where the line is proposed to be located." In its route selection process, Westar identified landowners within 1000 feet of the proposed line in order to have a better assurance that affected landowners would be identified and have an opportunity to provide input concerning location of the line. The list provided in Attachment 1 therefore exceeds the requirement of K.S.A. 66-1,178.

VERIFICATION

STATE OF KANSAS                    )
