June 26, 2024

Lynn M. Retz
Executive Director
Kansas Corporation Commission
1500 SW Arrowhead Road
Topeka, KS 66604

Dear Ms. Retz:

Enclosed for filing with the Commission are revisions to the following pages of Wheat State Technologies' (WHST) [LEC] General Exchange Tariff:

- Table Of Contents, 1st Revised Sheet 6
- Section 4, 1st Revised Sheets 4 through 7
- Section 4, 2nd Revised Sheet 8
- Section 4, 1st Revised Sheets 13 through 17

With this filing, Wheat State is removing services no longer provided and for which there are no customers. There is no ($0.00) revenue effect as a result of these changes.

Please return a stamped copy of the tariff sheets upon Commission approval. If you have any questions concerning this filing, please contact me on (785) 473-7337.

Sincerely,

/s/ Tom Maurer

General Exchange Tariff
Section 4
1st Revised Sheet 4

6. Call Screening - allows the customer to create a list of six (6) telephone numbers from which calls will be rejected. Calls from directory numbers contained on the list will be given a rejection tone or an announcement. This feature may only be used to reject selected calls from within the customer's end office or a different office, provided proper signaling exists between the originating, terminating, and interconnecting offices. Only those calls that the customer programs into the selective call rejection list will be rejected. To the extent sufficient equipment is available, customers may purchase more than one Call Screening feature in order to create additional telephone number lists.

7. Call Trace - allows the customer to dial a code to permit the Company to identify a specific incoming call immediately after the call is terminated. Activation of this feature requires the customer to coordinate with law enforcement agencies, and will also require the customer's written authorization to release any call information to such agencies.

8. Call Transfer - allows the customer to transfer a call to another telephone. The called line must be equipped with three-way calling to activate this feature.

9. Call Transfer/Three-Way Calling - allows the customer to have simultaneous conversations with two other parties.

10. Call Waiting - this feature provides a burst of tone to inform a customer who has a call in progress that another call has terminated to that line and is waiting to be answered. The customer may place the first party on "hold" while the second incoming call is answered.

11. Call Waiting Caller ID - allows a customer, while on the phone in an established call, to receive calling party caller ID information of an incoming call when alerted by the call waiting tone. Customers must provide and connect their own compatible premises equipment which is designed to display calling party name and number information.

(T) 12. Caller ID Name & Number Delivery - allows the transmission of calling party name and number information to the customer's access line. Customers must provide and connect their own compatible premises equipment which is designed to display calling party name and number information.

(D)

(D)

(T) 13. Do Not Disturb - allows the customer to prevent incoming calls from ringing their line by diverting the call to a tone or announcement.

(T) 14. Do Not Disturb Telemarketing - allows the customer to decline acceptance of calls from telemarketing firms. Telemarketing callers will hear an announcement.

(T) 15. Find Me/Follow Me - allows the customer to be located by forwarding calls to numerous devices either in sequence or simultaneously to a list of numbers. The customer can also forward calls to specific numbers based on a time schedule. Any calls that are forwarded to a number requiring long distance toll service will incur the appropriate long distance toll charges for the forwarded call.

(T)   16. Off Premises Extension (OPX) - OPX is a facility which allows a second customer line to act as if it is an extension of the customer's main service line. When the main line is called, both lines ring.

(T)   17. Preferred Call Forwarding - allows a customer to create a list of six (6) telephone numbers for which calls will be forwarded. Only those calls from numbers programmed into the preferred call forwarding list will be forwarded. To the extent sufficient equipment is available, customers may purchase more than one preferred call forwarding feature in order to create additional telephone number lists.

(T)   18. Priority Ringing - allows a customer to program their line with a distinctive ringing pattern for a list of six (6) calling numbers and with a normal ringing pattern for all other calling numbers. In addition, for customers who also have call waiting, a distinctive call waiting tone is heard when the line is called by one of the numbers on the list. The customer can, thus, selectively answer incoming calls based on the distinguishable ring pattern or tone. To the extent sufficient equipment is available, customers may purchase more than one priority call feature in order to create additional telephone number lists.

(T)   19. Remote Call Forwarding - allows a customer that also subscribes to call forwarding with the ability to activate, deactivate or change call forwarding from a remote location. All charges incurred to access the remote number will be appropriately billed.

(T)   20. Remote Feature Activation - allows a customer to activate/deactivate various ACS and CCS features from a location other than the customer's main service line.

(T)   21. Repeat Dialing - allows the customer to place a call to the last number to which a call was previously made or attempted. In addition, if the customer encounters a busy signal, this feature will automatically scan the called line for an idle condition. This scanning continues until the called station becomes idle, the original request is canceled, or a timer expires and clears the request.

(T)   22. Secure Access - allows the customer to prevent unauthorized outbound long distance calls being placed. This feature can be cancelled on a per-call basis by the customer.

(T)   23. SimRing - allows the customer to specify a list of numbers and in which order to ring when the customer's main number is called. Any calls that are forwarded to a number requiring long distance toll service will incur the appropriate long distance toll charges for the forwarded call.

(T)   24. Special Call Acceptance - allows the customer to create a list of six (6) telephone numbers from which calls will be accepted. Calls from directory numbers not contained on the list will be given a rejection tone or an announcement. This feature may only be used to accept selected calls from within the customer's end office or a different office, provided proper signaling exists between the originating, terminating, and interconnecting offices. Only those calls that the customer programs into the selective call acceptance list will be accepted. To the extent sufficient equipment is available, customers may purchase more than one Special Call Acceptance feature in order to create additional telephone number lists.

(T)   25. Speed Calling 8 or 30 - allows the customer to place calls to select directory numbers by dialing a one or two-digit code. The customer can generate a speed calling list of up to 38 directory numbers with each number in the list associated with a unique code (2 through 9 and 20 through 49).

Section 4
Kansas
1st Revised Sheet 6

(T)   26. Teen Service - provides for an additional directory number to be assigned to the same line. Each telephone number is assigned a unique ringing pattern to allow the customer to determine which number was called. A directory listing is also provided.

(T)   27. Toll Restriction & Diversion - allows the Company to block calls to certain customer-specified destinations. Customer options available are:

    a. Restriction of 1+ calls only.

    b. Restriction of 1+ and 0+/0- (operator handled) calls, except incoming 8XX type calls.

    c. Restriction of 1+, 0+/0- and incoming 8XX type calls.

Restriction of 0+ and 0- operator calls prevents the customer from dialing a long distance toll telephone number or operator for any purpose, including for emergency or telephone assistance. The Company shall not be liable for any and all claims, losses or damages caused by the customer's use of toll restriction.

(T)   28. Voice Data Protection (VDP) - allows a customer to inhibit intrusion features such as call waiting or operator services queries when the customer's line is in use. The customer may activate/deactivate VDP (variable service) or Company controlled (fixed service).

(T)   29. Warm Line/Direct Connect Service - allows the customer to automatically place a call to a preselected directory number by simply lifting the receiver off of the switchhook. No dialing is required for the calling party to reach the specified destination.
