

Docket number for Thrasher: Far Hadle:
18-CONS-3196-CLIC 18-CONS-3195 CLIC

Our property lies next to the injection well proposed on the Thrasher lease.

Both the Thrasher lease and the Hadle lease are near the Worden fault line

All the homes next to the lease are on good well water for our existence, Contamination to our well water would make it impossible to exist as we do now

All of the forty acres that homes sit on next to this lease has had oil wells on it over twenty years ago. These wells were capped and do not leak as of now. One is believed to be under a two acre pond. By putting pressure under ground on the same formation that these were drilled will cause them to leak into the ground & pond contaminating it & rendering the pond useless.

The run off from the pond will cause pollution down stream where more cattle drink. This stream emptys into the Wakarusa River and then into the Kansas River

With the contamination of well water from injection wells in Baldwin Co just South of us we are concerned about all of our property.

RECEIVED

How many Aquifers have to be contaminated before the KCCC stops injection wells from not only the contamination but earth quakes that are caused by injection wells near fault lines.

There has been millions of dollars in damages to peoples property that is not compensated to the people in Kansas because oil & gas companies are not held responsible for the damage they cause through the use of injection wells.

The company owning the Thrasher and Hadl leases must feel the KCCC is a rubber stamp for them as they have already drilled one injection well, just waiting for KCCC to sign off on it. If this is the case we the people have no say in what happens to our property or the water we depend on.

We oppose this permit application because of the serious damage that will result from it. We urge you to reject this permit & help protect the home owners around these leases. There are so many reasons not to approve this permit it is incomprehensible why it should ever be permitted. Please reconsider this proposal before destroying our land.
