**DIRECT TESTIMONY**

**PREPARED BY**

**LANA J. ELLIS, PHD**

**UTILITIES DIVISION**

**KANSAS CORPORATION COMMISSION**

**October 29, 2018**

1                   **I. STATEMENT OF QUALIFICATIONS**

2   **Q.**   **What is your name?**

3   A.   Lana J. Ellis.

4   **Q.**   **By whom and in what capacity are you employed?**

5   A.   I am employed by the Kansas Corporation Commission (KCC or Commission) as  
6         Deputy Chief within the Economics and Rates Section of the Utilities Division.

7   **Q.**   **What is your business address?**

8   A.   1500 S.W. Arrowhead Road, Topeka, Kansas, 66604-4027.

9   **Q.**   **What is your educational background and professional experience?**

10   A.   I have a B.S.B.A. from Missouri Western State University, an M.B.A. from  
11      Rockhurst University, an M.A. in economics and an interdisciplinary studies Ph.D.  
12      in economics and political science from the University of Missouri-Kansas City,  
13      and a J.D. from Seattle University. Before I began my employment with the  
14      Commission in 2010, I worked for Sprint Corporation for nine years, serving  
15      primarily in strategic planning and market research positions. In addition, I have  
16      taught university-level business and economics courses as an adjunct instructor.

17   **Q.**   **Have you previously submitted testimony before this Commission?**

18   A.   Yes. I filed testimony in Docket Nos. 14-KCPE-272-RTS, 14-BHCG-502-RTS,  
19      15-WSEE-181-TAR, 16-KCPE-446-TAR, 17-WSEE-147-RTS, 18-WSEE-328-  
20      RTS, and 18-KCPE-480-RTS. I have also participated, as a member of  
21      Commission Staff, in a number of other dockets.

1

## II. INTRODUCTION

2   **Q.**

**What is the purpose of your testimony?**

3   A.

The purpose of my testimony is to review Kansas Gas Service's—a Division of ONE Gas, Inc. (ONE Gas) (Kansas Gas Service, KGS, or Company)—Class Cost of Service (CCOS) study, sponsor Staff's CCOS study, and recommend the Commission accept Staff's CCOS as a reasonable basis for determining existing class rates of return and as a starting point for Staff's rate design.

8   **Q.**

**How is your testimony organized?**

9   A.

First, I will provide an overview of CCOS studies. I will then discuss Staff's CCOS methodology and the primary difference between Staff's methodology and KGS's methodology. Finally, I will discuss some key results of Staff's CCOS and explain why the Commission should accept Staff's methodology as the appropriate starting point for Staff's rate design.

14

## III. ANALYSIS

15

### General Overview of CCOS Studies

16   **Q.**

**What is the purpose of a CCOS study?**

17   A.

There is a traditional regulatory concept, commonly referred to as the cost causation principle, which states that customers who cause costs to be incurred should pay for those costs. Thus, the purpose of a CCOS study is to evaluate the causal link between a utility's cost of providing service to its customers and the consumption of those services.

1   **Q.   How is a utility's cost-of-service determined?**

2   A.   A utility's total system cost-of-service, also referred to as its total revenue  
3         requirement, is the cost of providing service to all its customers plus the opportunity  
4         to earn a return on its capital investments.<sup>1</sup> While there are many interpretations of  
5         what comprises reasonable cost, the most widely accepted cost standard is referred  
6         to as an embedded cost methodology. This methodology is utilized here by both  
7         Staff and Mr. Paul Raab, the witness sponsoring KGS's preferred CCOS study.

8   **Q.   What is an embedded cost methodology?**

9   A.   An embedded cost methodology utilizes cost allocation methods based on actual  
10      historical costs over a specific period of time—typically a 12-month test year.  
11      These costs may be adjusted for known and measurable changes that occur outside  
12      the test period. Once the total system revenue requirement is established, the utility  
13      must be given an opportunity to recover its prudently incurred cost-of-service from  
14      its various customer classes. This is accomplished by apportioning revenues and  
15      expenses to the customer classes in a CCOS study. The subsequent results can then  
16      be used as a guide to determine if a particular customer class is contributing a  
17      reasonable amount of revenue for the utility to recover the costs of providing  
18      service to that class. Thus, the CCOS serves as a starting point for rate design.

---

<sup>1</sup> Cost of Service as a Basic Standard of Reasonableness is addressed in James Bonbright's Principles of Public Utility Rates, a foremost manual on public utility ratemaking. "One of the reasons for the popularity of a cost-of-service standard of ratemaking lies in the flexibility of the standard itself. 'Cost,' like 'value' is a word of many meanings, with the result that people who disagree, not just on minor details but on major principles of ratemaking policy, may all subscribe to some version of the principle of service at cost." James C. Bonbright et al., *Principles of Public Utility Rates* 109 (1988).

1   **Q.   How are CCOS studies developed?**

2   A.   Generally speaking, a utility's costs can be divided into either costs directly related  
3         to providing service to a specific customer class or joint or common costs associated  
4         with providing service to multiple customer classes. While the costs directly related  
5         to providing service to a specific customer class can be directly assigned to that  
6         class, most of the utility's costs are joint costs or common costs that cannot be  
7         directly assigned. Therefore, much of the work of developing a CCOS study  
8         involves spreading the joint or common costs across the different customer classes.  
9         This is accomplished through a three step process—functionalization,  
10         classification, and allocation.

11   **Q.   Please describe the functionalization process.**

12   A.   The functionalization process is one in which costs are categorized into the major  
13         functional components related to a utility's operations (i.e. production,  
14         transmission, distribution, customer services and facilities, and administrative and  
15         general). The utility's accounting practices typically follow the Federal Energy  
16         Regulatory Commission (FERC) Uniform System of Accounts, which records costs  
17         by the function for which they were incurred.<sup>2</sup> Therefore, by following the FERC  
18         Uniform System of Accounts, the costs are already functionalized.

---

<sup>2</sup> See the FERC Uniform System of Accounts for Natural Gas Companies under General Instruction, No. 3, Number system. Notice that accounts 700-899 are for Production, Transmission, and Distribution Expenses. In addition, accounts 900-949 are for Customer Accounts, Customer Service and Information, Sales and General and Administrative Expenses.

1   **Q. Please describe the classification process.**

2   A. The classification process involves taking the functionalized costs and classifying  
3   them by whether they are more closely related to the number of customers in each  
4   class (customer-related), the demand placed on the system by each class (demand-  
5   related), or the amount consumed by each class (commodity-related). Classifying  
6   customer-related costs such as installation, billing, and meters is relatively straight  
7   forward with little disagreement amongst analysts. On the other hand, classifying  
8   demand-related and commodity-related costs is much more complex and, thus,  
9   subject to more disagreement. The methodology used for classifying a utility's  
10   plant costs is particularly important in a CCOS study because other utility  
11   investment and expense accounts such as depreciation, operations and maintenance  
12   (O&M), etc. follow the methodology used for classifying plant.

13   **Q. Please describe the allocation process.**

14   A. The allocation process is the final step where the functionalized costs, which are  
15   classified as customer-related, demand-related, or commodity-related, are assigned  
16   to the different customer classes. Internally-generated composite factors are also  
17   used to classify and allocate many accounts. For example, General Plant – Plant-  
18   Related is classified and allocated on the basis of an internally-generated composite  
19   factor comprised of the sum of production and gathering, transmission, and  
20   distribution plant.

21   **Q. Is there only one accepted method to classify and allocate the utility's cost of  
22   service to specific customer classes?**

23   A. No. There is no universally accepted method for classifying and allocating costs to  
24   customer classes. Even with a seemingly impartial standard, such as cost based

1       rates, there is significant opportunity for independent judgement and subjective  
2       decision making to affect the final results. Even though these judgements must  
3       have a reasonable basis, individual methodologies are complex and have  
4       encouraged numerous debates.

5       **Q. Do CCOS studies have any other limitations?**

6       A. Yes. As discussed above, a substantial number of subjective judgements must go  
7       into the production of any CCOS study. In addition, because all CCOS studies are  
8       based on allocation mechanisms that are approximations of structural cost  
9       relationships, CCOS studies must themselves be viewed as approximations.  
10      Finally, a CCOS provides only a static snapshot of a dynamic process. Over time,  
11      the structural relationships have changed and are expected to continue to change in  
12      the future. It is important to consider these limitations when using a CCOS study  
13      as a guide to allocate the revenue requirement to the customer classes when  
14      designing rates.<sup>3</sup>

15      **Staff's CCOS Methodology**

16      **Q. Has Staff prepared a CCOS study in this Docket?**

17      A. Yes, Exhibit LJE-1 is a fully-allocated CCOS study using an embedded cost  
18      methodology and utilizing data from Staff's Schedules. Staff's pro-forma revenue  
19      requirement increase is \$19,828,859, with a rate of return of 6.8045%.

---

<sup>3</sup>The Gas Distribution Rate Design Manual warns: "There is no scientifically correct method of making necessary allocations. A certain amount of judgement must be used in any cost of service study. Consequently, cost allocation studies should only be utilized as a general guide or as a starting point for rate design." NARUC Gas Distribution Rate Design Manual 19 (June 1989).

1    *Customer Classes*

2    **Q.    How did Staff define the customer classes to be used in its CCOS?**

3    A.    Staff uses the same customer classes in its CCOS that KGS uses, as follows:<sup>4</sup>

4              Sales customers are divided into Retail: Residential (RS); General  
5              Service Small (GSS); General Service Large (GSL); General Service  
6              Transport Eligible (GSTE); Small Generator Service (SGS); Irrigation  
7              Sales (GIS); and Wholesale: Kansas Gas Supply (KGSSD); and Sales for  
8              Resale (SSRk and SSR-BHk) classes.

9              Transportation customers are divided into Retail: Small Transport (STk  
10             and STt); Compressed Natural Gas (CNGk and CNGt); Irrigation  
11             Transport (GIT); Large Volume Transport k-system tiers 1 thru 4 (LVTk-  
12             T1, LVTk-T2, LVTk-T3, LVTk-T4); Large Volume Transport t-system  
13             tiers 1 thru 4 (LVTt-T1, LVTt-T2, LVTt-T3, LVTt-T4); and Wholesale  
14             (WTt).

15             Because flex and interruptible transportation customers are not included in the  
16             classes listed above, the revenues and expenses attributable to these customers are  
17             spread across all customer classes.

18    **Q.    Please describe how Staff developed its CCOS study.**

19    A.    Staff followed the basic steps outlined above beginning with collecting data for  
20             revenues, investments, and operating expenses. Costs that were clearly caused by  
21             a particular class were directly assigned to that class. For the assignment of joint

---

<sup>4</sup>Direct Testimony of Paul. H. Raab (Raab Direct), Exhibit PHR-7.

1 and common costs, Staff followed the three-step process discussed above—  
2 functionalization, classification, and allocation.

3 ***Functionalization***

4 **Q. Please describe Staff's methodology for functionalizing costs.**

5 A. Because the Company's accounting processes follow the FERC Uniform System  
6 of Accounts, the accounts were already separated into production, storage,  
7 transmission, distribution, customer service and information, and administrative  
8 and general.

9 ***Classification***

10 **Q. Please describe Staff's methodology for classifying costs.**

11 A. After gathering cost data for the functionalized accounts, Staff examined the data  
12 to determine whether the costs were customer-related, demand-related, or  
13 commodity-related. The costs classified as customer-related include those  
14 correlated with serving individual customers—billing, services, customer service,  
15 etc. Thus, distribution plant such as meters, regulators, and installation are  
16 classified as customer-related.

17 Costs that vary with the peak-load requirements of the utility's customers are  
18 classified as demand-related. This includes the costs associated with transmission  
19 and portions of distribution plant such as mains and other lines serving multiple  
20 customers.

21 Those costs that vary with the amount of consumption are classified as  
22 commodity-related. Some accounts are also classified as a combination of  
23 customer-, demand-, and/or commodity-related using the internally-generated

1 composite factors. For instance, Staff used the system load factor to classify  
2 production plant into demand- and commodity-related.<sup>5</sup> The load factor calculation  
3 separates production plant components into 59% demand-related and 41%  
4 commodity-related. In addition, the land and land rights portion of distribution  
5 plant is classified using an internally-generated customer- and demand-related  
6 composite factor.

7 ***Allocation***

8 **Q. Please describe Staff's methodology for allocating costs.**

9 A. Allocation factors are calculated based on the cost causation principle. The  
10 allocation factor applied to a particular cost is selected based on the principle that  
11 costs are allocated to the specific customer classes responsible for incurring those  
12 costs. For example, meters are allocated to the customer classes using an allocator  
13 weighted for the number of customers and the cost of the meters.

14 Demand-related expenses associated with transmission plant are allocated to  
15 the retail sales customer classes, using a coincident peak (CP) allocator.  
16 Transmission plant is also allocated to transportation customers identified as being  
17 on the t-system, which incorporates fully integrated gathering, transmission, and  
18 distribution systems. Transportation customers on the k-system are not assigned  
19 transmission costs since the k-system relies on interstate pipelines for transmission.  
20 For demand-related portions of distribution plant, Staff uses a non-coincident peak  
21 (NCP) allocator.

---

<sup>5</sup> Load Factor = Average Monthly Usage / Peak Demand.

1           For demand-related portions of production, Staff uses a monthly CP demand  
2           that excludes transportation customers. The commodity-related portions of  
3           production plant are allocated on the basis of annual thousands of cubic feet  
4           (MCF's) delivered. For production plant and storage, Staff's commodity allocator  
5           also excludes transportation customers because these customers do not purchase  
6           their gas from KGS.

7           General Plant – Plant-Related is allocated on the basis of an internally-  
8           generated composite factor comprised of the sum of production and gathering,  
9           transmission, and distribution plant.

10          **Primary Difference Between Staff's and KGS's CCOS Studies**

- 11          **Q.      What is the Primary Difference between Staff's and KGS's CCOS Studies?**
- 12          A.     The primary difference between Staff's study and KGS's study is the allocation of  
13           rate base to the residential class. Table 1 below shows a comparison of the  
14           allocation of rate base for Staff's CCOS and for KGS's corrected CCOS.<sup>6</sup> Note  
15           that with Staff's CCOS, the residential class is allocated \$772,158,945 (74.75%) of  
16           the Total System Rate Base, as adjusted by Staff, whereas, KGS's CCOS allocates  
17           \$816,961,782 (80.40%) of the Company's Total System Rate Base to the residential  
18           class.

---

- 2     **Q. What is the primary reason for the difference between Staff's allocation of rate**  
 3     **base and KGS's allocation of rate base?**
- 4     A.   The primary reason for the difference between Staff's allocation of rate base and  
 5       KGS's allocation of rate base is the classification of distribution mains plant.
- 6     **Q. What are distribution mains?**
- 7     A.   Distribution mains consist of the network of distribution pipe that serves as a  
 8       common source of supply to which customers' service lines are attached.

1   **Q. Please discuss Staff's methodology for classifying and allocating distribution**  
2   **mains plant.**

3   A. Staff classifies distribution mains plant as 100% demand-related and uses an NCP  
4   allocator. The purpose of mains is to ensure that natural gas service can be provided  
5   at all times, meaning mains must be sized to meet the peak demand for each part of  
6   the distribution system. Thus, the appropriate allocator is NCP demand—the peak  
7   demand for each part of the distribution system independent of the rest of the  
8   system.

9                 Staff's NCP methodology allocates costs across customer classes based on the  
10          non-coincident peak demand of the specific customer class, regardless of when that  
11          peak occurs. This means that customer classes that have peak demands occurring  
12          outside of the system peak would be assigned their appropriate share of the  
13          distribution mains cost.

14   **Q. How did KGS classify and allocate distribution mains?**

15   A. Staff classifies distribution mains plant as 100% demand-related, while KGS  
16          classifies distribution mains plant as 47% customer-related and 53% demand-  
17          related.<sup>7</sup> KGS then allocates the demand-related portion on the basis of monthly  
18          NCP demand like Staff. To determine the portions of distribution mains plant  
19          classified as customer-related and demand-related, KGS used the zero-intercept  
20          method.

---

<sup>7</sup> Raab Direct, p. 44.

1   **Q.   What is the zero-intercept method?**

2   A.   The zero-intercept method is one in which the cost of a theoretical main of zero-  
3       inch diameter is classified as a customer-related investment and all costs in excess  
4       of that amount are classified as demand-related.<sup>8</sup> The theoretical cost of a zero-  
5       inch main is derived by regressing the cost of mains on the diameter of those mains  
6       and the cost of the zero-inch main is the point at which the regression line intersects  
7       the y-axis.<sup>9</sup>

8   **Q.   What is the impact of these two different methodologies?**

9   A.   Table 2 below illustrates the results of the two different methodologies for  
10      classifying and allocating distribution mains plant. Mains account for  
11      approximately 45% of total distribution plant and represent a major investment in  
12      KGS's distribution system. Table 2 shows that the Company's distribution mains  
13      accounts total \$661,774,015 and KGS's methodology allocates \$486,030,457  
14      (73.44%) of those costs to the residential class. Staff's adjusted total for mains is  
15      \$674,134,601 and Staff's methodology allocates \$386,919,876 (57.40%) of those  
16      costs to the residential class.

2                   As discussed above, Staff classifies distribution mains as 100% demand-  
 3                   related, whereas KGS classifies distribution mains as 47% customer-related and  
 4                   53% demand-related.<sup>10</sup> Under KGS's method, customer-related costs are then  
 5                   allocated to customer classes using the number of bills (about 91.30% for  
 6                   residential customers) and demand-related costs are allocated to customer classes  
 7                   using NCP demand (about 57.40% to residential customers). The net result is that

---

<sup>10</sup> Raab Direct, p. 44.

1       using the zero-intercept method results in the residential class absorbing about  
2       73.44% of the cost of mains as opposed to 57.40% under Staff's method.

3   **Q. Why does Staff classify the cost of distribution mains plant as purely demand-  
4       related?**

5   A.    Mains supply the gas for the distribution system and are sized for demand, not for  
6       the number of customers. The number of customers affects mains cost indirectly  
7       through demand, which is captured by the NCP allocator. By classifying mains as  
8       demand-related, Staff classifies mains based on the purpose they serve—meeting  
9       demand.

10   **Q. Are there any other reasons Staff classifies the cost of distribution mains plant  
11       purely as demand-related?**

12   A.    Yes. As mains increase in size, the marginal cost of the additional capacity  
13       declines. In order to properly align these returns to scale with the underlying cost  
14       drivers, mains should be allocated based on the relative demand customers place  
15       on the system. Conversely, because residential customers represent about 90% of  
16       customers but only about 55% of demand, allocating the cost of mains using KGS's  
17       zero-intercept method—about 50% for customer-related and 50% for demand-  
18       related—the benefits of the returns to scale are offset by the disproportionate  
19       amount of the cost of a theoretical zero-inch main that is allocated to residential  
20       customers.

21   **Other Important Results**

22   **Q. What are some of the other important results of Staff's and KGS's CCOS  
23       studies?**

24   A.    Below, in Table 3, is a comparison of the system-wide and class rates of return  
25       (ROR) and relative ROR indexes from Staff's CCOS and KGS's corrected CCOS.

1        Staff's system-wide and class ROR's at the Company's existing rates are in column  
 2        (1) and the class relative ROR indexes are in column (2). Columns (3) and (4)  
 3        contain the corresponding information from KGS's CCOS.

<b>TABLE 3</b> <b>CLASS RATE OF RETURN - EXISTING RATES</b>

<b>Total System Average</b>	<b>5.39%</b>	<b>1.00</b>	<b>4.41%</b>	<b>1.00</b>

5        **Q. Why are these results important?**

6        A.      The class ROR and relative ROR index at existing rates are important for rate  
 7        design purposes. This information can be used as a guide for identifying which  
 8        customer classes to consider for revenue adjustments when designing rates.

1   **Q. Please explain how the ROR and relative ROR index act as a guide for**  
2   **designing rates?**

3   A. The class ROR indicates the amount of operating revenues generated by each  
4   customer class relative to the amount of rate base allocated to it. These class RORs  
5   can be compared to the system-wide ROR to get a general idea of the magnitude of  
6   allocated costs in relation to the revenues each class generates. A class with an  
7   ROR less than the system-wide ROR is generating less operating revenue given the  
8   amount of costs allocated to it; and a class with an ROR higher than the system-  
9   wide ROR is generating more revenue than its allocated costs.

10   The relative ROR index normalizes the class rates of return to help analyze the  
11   implications of class RORs. For a particular class, the index is calculated by  
12   dividing that class' ROR by the system-wide ROR. Thus, a class with the same  
13   ROR as the system average would have a relative ROR index of 1.0. A class with  
14   a relative ROR index less than 1.0 is generating less operating revenue than its  
15   allocated costs; and a class with a relative ROR index greater than 1.0 is generating  
16   more operating revenue than its allocated costs.

17                          **IV. CONCLUSION**

18                          **Recommendation**

19   **Q. Should the Commission accept Staff's CCOS?**

20   A. Yes. Because Staff's methodology appropriately reflects the causal link between  
21   KGS's cost of providing service to its customers and the consumption of those  
22   services, I recommend the Commission find Staff's CCOS study provides a  
23   reasonable basis for the allocation of KGS's revenues and costs. Accordingly, I  
24   recommend the Commission accept Staff's CCOS study as a reasonable basis for

1       determining existing class rates of return and as a starting point for Staff's rate  
2       design.

3   **Q. Does this conclude your testimony?**

4   A.   Yes. Thank you.
