DIRECT TESTIMONY  
OF  
MICHAEL J. MAJOROS, JR.

1    **INTRODUCTION**

2    **Q.     PLEASE STATE YOUR NAME.**

3    A.     My name is Michael J. Majoros, Jr.

4    **Q.     BY WHOM AND IN WHAT CAPACITY ARE YOU EMPLOYED?**

5    A.     I am Vice President of Snavelly King Majoros O'Connor & Lee, Inc. ("Snavelly King"),  
6           an economic consulting firm with offices at 1111 14<sup>th</sup> Street, N.W., Suite 300,  
7           Washington, D.C. 20005.

8    **Q.     PLEASE DESCRIBE SNAVELLY KING.**

9    A.     Snavelly King is an economic consulting firm, founded in 1970 to conduct research on a  
10          consulting basis into the rates, revenues, costs and economic performance of regulated  
11          firms and industries. We represent the interests of government agencies, businesses and  
12          individuals who are consumers of telecom, public utility and transportation services. In  
13          addition to consumer cost and anti-trust issues, we have provided our expertise in support  
14          of a clean environment and personal damages resulting from discrimination in  
15          agricultural programs. We believe in accountability, fair competition and effective  
16          regulation. We seek and use new ideas, findings and opportunities when appropriate, and  
17          avoid reliance upon traditional approaches based on faulty premises.

18               The firm has a professional staff of 11 economists, accountants, engineers and  
19               cost analysts. Most of our work involves the development, preparation and presentation  
20               of expert witness testimony before Federal and state regulatory agencies. Over the course  
21               of our 38-year history, members of the firm have participated in more than 1,000

1 proceedings before almost all of the state commissions and all Federal commissions that  
2 regulate utilities or transportation industries.

3 **Q. HAVE YOU PREPARED A SUMMARY OF YOUR QUALIFICATIONS AND**  
4 **EXPERIENCE?**

5 A. Yes. Appendix A is a summary of my qualifications and experience. Appendix B  
6 contains a tabulation of my appearances as an expert witness before state and Federal  
7 regulatory agencies.

8 **Q. AT WHOSE REQUEST ARE YOU APPEARING?**

9 A. I am appearing at the request of the Citizens' Utility Ratepayer Board ("CURB").

10 **SUBJECT OF TESTIMONY**

11 **Q. WHAT IS THE SUBJECT OF YOUR TESTIMONY?**

12 A. I will testify regarding Atmos Energy Corporation's ("Atmos" or "the Company")  
13 proposed depreciation rates.

14 **Q. DO YOU HAVE ANY SPECIFIC EXPERIENCE IN THE FIELD OF PUBLIC**  
15 **UTILITY DEPRECIATION?**

16 A. Yes. Among other areas, my firm specializes in the field of public utility depreciation.  
17 Our clients have ranged from consumer organizations such as ratepayer advocates and  
18 Commission staffs to carriers such as AT&T. We have appeared as expert witnesses on  
19 depreciation before the regulatory commissions of more than half of the states in the  
20 country. I have testified in well over 100 proceedings on the subject of public utility  
21 depreciation, and represented various clients in several other proceedings in which  
22 depreciation was an issue but was settled. I have also negotiated on behalf of clients in

1           fifteen of the Federal Communications Commission's ("FCC") Triennial Depreciation  
2           Represcription conferences.

3   **Q.   DOES YOUR EXPERIENCE SPECIFICALLY INCLUDE GAS COMPANY**  
4   **DEPRECIATION?**

5   A.   Yes, I have testified in many proceedings on the subject of gas company depreciation,  
6           and I have prepared testimony in several other gas proceedings in which depreciation was  
7           ultimately settled.

8   **Q.   HAVE YOU EVER APPEARED BEFORE THE KANSAS CORPORATION**  
9   **COMMISSION ("KCC")?**

10   A.   Yes, I have appeared before the KCC on several occasions, including Atmos's last base  
11           rate case, Docket No. 03-ATMG-1036-RTS. I submitted testimony on behalf of both  
12           CURB and Staff in that proceeding. The case was ultimately settled.

13   **PURPOSE OF TESTIMONY**

14   **Q.   WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

15   A.   CURB asked me to review the depreciation-related testimony and exhibits of Atmos  
16           Energy. I was asked to express an opinion regarding the reasonableness of the  
17           Company's depreciation expense proposal and, if warranted, make alternative  
18           recommendations.

19   **COMPANY PROPOSAL**

20   **Q.   PLEASE SUMMARIZE ATMOS'S DEPRECIATION EXPENSE PROPOSALS.**

21   A.   Mr. Donald Roff sponsors Atmos's depreciation studies. Mr. Roff conducted separate  
22           studies for Kansas gas plant and shared services ("SSU") plant. In both cases, he

1 calculated remaining life rates using ELG. His studies are based on plant and reserve  
2 balances as of September 30, 2006.<sup>1</sup>

3 Mr. Roff's recommendations result in a \$1,462,099 million increase to gas plant  
4 depreciation expense and a \$2,662,501 million increase to shared services depreciation  
5 expense, based on September 30, 2006 balances.<sup>2</sup>

## 6 **SUMMARY AND CONCLUSIONS**

### 7 **Q. DID YOU REVIEW MR. ROFF'S STUDIES?**

8 A. Yes, I reviewed Mr. Roff's studies, his responses to staff's and my data requests, and I  
9 conducted independent analysis. I have accepted some aspects of Mr. Roff's proposals,  
10 but overall I disagree with Mr. Roff's proposed depreciation rates and accruals.

### 11 **Q. WHAT DO YOU RECOMMEND?**

12 A. In recognition of current accounting rules, Atmos has identified the non-legal asset  
13 retirement obligations ("non-legal AROs") contained in its accumulated depreciation  
14 account. These result from prior cost of removal charges to customers that have  
15 exceeded Atmos's actual cost of removal expenditures. I recommend that the KCC  
16 specifically recognize and reclassify these amounts from Atmos's account 108 -  
17 Accumulated provision for depreciation, to account 254 - Other regulatory liabilities  
18 (cost of removal), consistent with the treatment prescribed by generally accepted  
19 accounting principles ("GAAP") and required for financial reporting purposes by the  
20 Securities and Exchange Commission ("SEC"), and consistent with the KCC's decision  
21 in Docket No. 05-WSEE-981-RTS.<sup>3</sup>

---

<sup>1</sup> Direct Testimony of Donald Roff, pp. 1 and 2.

<sup>2</sup> Exhibits DSR-3, p. 3 and DSR-4, p. 3.

<sup>3</sup> Order on Petitions for Reconsideration and Clarification, Docket No. 05-WSEE-981-RTS, issued February 13, 2006, p. 49.

1           The KCC should also return this amount to ratepayers via an amortization over a  
2           specific period, which could range from one year to the average remaining life of the  
3           plant functions to which these regulatory liabilities relate. I recommend the use of the  
4           average remaining life as an amortization period. Use of a remaining life amortization  
5           period will result in zero revenue requirement impact from both the reclassification to  
6           account 254 as well as the amortization.

7           On a going-forward basis, the KCC should change the inflated approach Atmos  
8           has used to calculate the annual net salvage costs for “non-legal AROs.” Rather than  
9           Atmos’s inflated approach, I recommend an annual normalized cost of removal  
10          allowance based on the average of the most recent five years of Atmos’s actual  
11          experience. This approach will keep Atmos whole regarding any cost of removal it  
12          actually incurs and will stop the significant build-up of the regulatory liability. This  
13          approach will also facilitate the tracking of the regulatory liability resulting from non-  
14          legal AROs.

15   **Q.    ARE THERE ANY OTHER REASONS FOR THIS APPROACH?**

16   A.    Yes, Exhibit\_\_\_\_(MJM-1), summarizes all of Atmos’s salvage, cost of removal and net  
17          salvage data, supporting its filed study. As you can see, most of the cost of removal data  
18          occurs in the most recent few years. Hence, it is impossible to obtain longer-term  
19          indications. Consequently, the normalized allowance I propose is, in my opinion,  
20          equivalent to the use of a net present value approach to cost of removal. I have no  
21          objections to a net present value approach.

22   **Q.    DO MR. ROFF’S DEPRECIATION RATES INCORPORATE ANY OTHER**  
23   **CHANGES?**

1 A. Yes, Mr. Roff's depreciation rates incorporate an unnecessary retroactive change to the  
2 equal life group ("ELG") procedure, which should be rejected. Such a change should  
3 only be made on a going-forward basis, if at all. Atmos's depreciation rates should be  
4 calculated using the Average Life Group ("ALG") procedure, consistent with its last  
5 depreciation rates addressed in a litigated rate case. Furthermore, while most of Mr.  
6 Roff's life recommendations are acceptable, I find that three of his proposed lives are too  
7 short.

8 In summary:

- 9 • I recommend that the KCC recognize Atmos's non-legal AROs as a  
10 regulatory liability for ratemaking purposes in Kansas.
- 11 • I recommend that the KCC return the existing regulatory liability to  
12 ratepayers over the remaining life of the plant.
- 13 • I recommend that instead of the Company's inflated net salvage proposals,  
14 the KCC should adopt a normalized cost of removal allowance approach  
15 based upon the most recent five years of actual experience which is  
16 equivalent to the adoption of a net present value approach.
- 17 • I recommend that Atmos's rates be calculated using the ALG procedure,  
18 instead of Mr. Roff's proposed ELG procedure.
- 19 • I recommend that the lives for three accounts be lengthened.

20  
21  
22  
23  
24  
25  
26 **Q. WHICH ASPECTS OF MR. ROFF'S STUDIES HAVE YOU ACCEPTED?**

27 A. I have accepted all but three of the Company's forward-looking lives and curves. I have  
28 also accepted any gross salvage he incorporated into his rates.

29 **PRESENT DEPRECIATION RATES**

30 **Q. WHEN WERE THE COMPANY'S PRESENT DEPRECIATION RATES**  
31 **APPROVED?**

1 A. Atmos's present depreciation rates were approved as part of a Stipulated  
2 Settlement in Docket No. 03-ATMG-1036-RTS, Order issued December 1,  
3 2003:

4 The parties agree to use Atmos' proposed depreciation rates. The  
5 parties further agree that this does not mean that the parties  
6 acquiesce to the propriety of Atmos' depreciation parameters,  
7 methodology, procedures or techniques. This agreement to use  
8 Atmos' proposed depreciation rates is for settlement purposes  
9 only and has benefits for all parties. It shall not be cited,  
10 referenced, or used in any manner by any party or consultant as a  
11 precedential Commission decision or Commission staff action  
12 concerning the merits of depreciation issues in any future  
13 proceeding in Kansas or any other jurisdiction. Atmos agrees that  
14 it will not oppose the initiation of a Commission general  
15 investigation into depreciation issues, including the treatment of  
16 net salvage costs and use of Equal Life Group procedure.<sup>4</sup>  
17

18 **Q. WHY HAVE YOU QUOTED THE STIPULATED SETTLEMENT AGREEMENT**  
19 **ABOVE?**

20 A. I quoted the depreciation section of the Stipulated Settlement Agreement to demonstrate  
21 that Atmos' present rates were neither litigated nor agreed to. They were adopted as part  
22 of an overall settlement. Further language in the Settlement Order demonstrates the  
23 compromise nature of the settlement.

24 In this case a number of parties with varied interests acknowledged  
25 the risks and costs of litigation and negotiated a compromise  
26 resolution.<sup>5</sup>  
27

28 The parties believe that the resolution of these issues is just and  
29 reasonable, granting a sufficient basis to significantly shorten the  
30 hearing. The parties agree that any issue not specifically addressed  
31 by this Agreement should not be resolved by implication or the  
32 execution of this Agreement, and shall remain reserved for  
33 determination on the merits in any future proceeding.<sup>6</sup>

<sup>5</sup> Docket No. 03-ATMG-1036-RTS, Order Approving Stipulated Settlement Agreement, ¶ 4.

<sup>6</sup> Docket No. 03-ATMG-1036-RTS, Stipulated Settlement Agreement, ¶ 6.

1  
2 **Q. WHY IS IT IMPORTANT TO NOTE THAT THE PARTIES IN THE PREVIOUS**  
3 **CASE NEVER SPECIFICALLY AGREED TO THE PARAMETERS,**  
4 **METHODOLOGY, PROCEDURES OR TECHNIQUES UNDERLYING ATMOS'**  
5 **PRESENT DEPRECIATION RATES?**

6 A. It is important because Mr. Roff has again used the Equal Life Group procedure to  
7 calculate his rates, as well as the same net salvage methodology he used in the previous  
8 case.

9 **Q. DID YOU PARTICIPATE IN DOCKET NO. 03-ATMG-1036-RTS?**

10 A. Yes. I submitted testimony regarding depreciation on behalf of the Commission Staff  
11 and CURB.

12 **Q. WHAT WERE YOUR FINDINGS IN THAT CASE?**

13 A. In Docket No. 03-ATMG-1036-RTS I found that Mr. Roff's rates produced an  
14 unreasonable level of expense, primarily due to his use of the ELG procedure and his net  
15 salvage proposals. I had the following specific disagreements with his proposals in that  
16 case:

- 17 • The Company's proposed incorporation of future net  
18 salvage values in its depreciation rate calculations is  
19 unreasonable because they increase the depreciation rates  
20 for inflated estimates of costs that probably will not be  
21 incurred.  
22
- 23 • The Company's proposed retroactive change to the equal  
24 life group ("ELG") procedure is unreasonable because  
25 such a change should only be made on a going-forward  
26 basis.<sup>7</sup>  
27

---

<sup>7</sup> Docket No. 03-ATMG-1036-RTS, Direct Testimony of Michael J. Majoros, Jr., page 4.

1 **Q. YOU MENTIONED ABOVE THAT MR. ROFF HAS MADE SIMILAR**  
2 **PROPOSALS IN THIS CASE. DO YOU STILL HAVE THE SAME**  
3 **DISAGREEMENTS?**

4 A. Yes, I do. Although his rates were adopted in the previous case, they were not adopted  
5 on their merits. I was particularly concerned about his proposed switch to the use of the  
6 ELG procedure, as it represented an unnecessary and costly change in the way Atmos  
7 calculated its Kansas depreciation rates. It clearly elevated the level of depreciation  
8 expense in that proceeding, but that does not mean the procedure or the elevation was  
9 sanctioned.

10 **THE EXISTING COST OF REMOVAL REGULATORY LIABILITY**

11 **Q. YOUR FIRST RECOMMENDATIONS RELATE TO ATMOS'S NON-LEGAL**  
12 **AROS. WHAT ARE NON-LEGAL AROS?**

13 A. The Financial Accounting Standards Board's ("FASB") Statement of Financial  
14 Accounting Standard No. 143 ("SFAS No. 143") and the Federal Energy Regulatory  
15 Commission's ("FERC") Order No. 631 have identified and highlighted utilities' prior  
16 excess collections for future cost of removal. Order No. 631 defines these excess  
17 collections as non-legal asset retirement obligations ("non-legal AROs").

18 If a utility has charged cost of removal for a non-legal ARO, that amount is to be  
19 segregated within accumulated depreciation for FERC purposes and reclassified as a  
20 regulatory liability for GAAP purposes. Furthermore, if a utility has collected too much  
21 depreciation for a legal ARO, the excess also becomes as a regulatory liability for both  
22 FERC and GAAP purposes.<sup>8</sup>

---

<sup>8</sup> SFAS No. 143.

1 In other words, if a utility has collected for future cost of removal in its  
2 depreciation rates, but does not and never had a legal obligation to spend the money,  
3 these excesses are to be segregated and to be reported as a regulatory liability; the  
4 company must remain accountable for the money it collected until it is spent on its  
5 intended purpose.<sup>9</sup> Otherwise it must be returned to ratepayers.

6 FERC identified these amounts as “non-legal” asset retirement obligations,  
7 because utilities do not have actual legal obligations and liabilities to incur these costs in  
8 the future. Atmos reported regulatory liabilities in compliance with SFAS No. 143 as  
9 follows:

10 **Atmos Energy Corporation**  
11 **Regulatory Liabilities Resulting from Non-Legal AROs**  
12 **(\$millions)<sup>10</sup>**  
13

<b><u>Period Ending</u></b>	<b><u>Atmos Energy Total</u></b>	<b><u>KS Jurisdiction</u></b>	<b><u>SSU</u></b>
Sept. 30, 2005	\$ 263.4	\$ 9.7	\$ 0.03
Sept. 30, 2006	261.4	10.2	0.03
Sept. 30, 2007	271.1	N/A	N/A

14  
15 The regulatory liability for the KS jurisdiction increased by the amount that Atmos  
16 collected from KS ratepayers, over and above its actual removal costs for each period.

17 **Q. EXPLAIN THE ISSUES THAT RESULT FROM THE HIGHLIGHTING OF THE**  
18 **NON-LEGAL AROS PROVIDED BY SFAS NO. 143 AND FERC ORDER NO.**  
19 **631.**

---

<sup>9</sup> Id., paragraph B.73.

<sup>10</sup> See Atmos Energy, September 30, 2006 10-K Report, p. 66, September 30, 2007 10-K Report, p. 64 and response to CURB Data Request No. 180. KS and SSU amounts for Sept. 30, 2007 were not provided due to timing of request and response.

1 A. There are several new issues. One important new issue is the need for the KCC to  
2 recognize Atmos's non-legal ARO reserve as a regulatory liability for regulatory and  
3 ratemaking purposes. Although Atmos has recognized these amounts as regulatory  
4 liabilities in its 10-K reports, it has not done so for regulatory and ratemaking purposes.  
5 Once the KCC recognizes and requires separate identification and regulatory reporting of  
6 the cost of removal regulatory liability in Kansas, the Commission should consider  
7 disposing of or reducing the liability for ratemaking purposes. Finally, the KCC should  
8 consider how to avoid the continued exponential build-up of the regulatory liability on a  
9 going-forward basis.

10 **THE KCC SHOULD REQUIRE SEPARATE IDENTIFICATION AND REGULATORY**  
11 **REPORTING**

12 **Q. WHAT PROVISIONS OF FERC ORDER NO. 631 REQUIRE SEPARATE**  
13 **IDENTIFICATION AND REPORTING OF NON-LEGAL AROS?**

14 A. FERC Order No. 631 requires jurisdictional entities such as Atmos to "maintain separate  
15 subsidiary records for cost of removal for non-legal retirement obligations that are  
16 included as specific identifiable allowances recorded in accumulated depreciation in  
17 order to separately identify such information to facilitate external reporting and for  
18 regulatory analysis, and rate setting purposes. Therefore, the Commission [amended] the  
19 instructions of accounts 108 ...in Parts 101 ... to require jurisdictional entities to  
20 maintain separate records for the purposes of identifying the amount of specific  
21 allowances collected in rates for non-legal retirement obligations included in the

1 depreciation accruals.”<sup>11</sup> The KCC should extend this requirement to regulatory and  
2 ratemaking purposes in Kansas.

3 **THE KCC SHOULD SPECIFICALLY RECOGNIZE THE REGULATORY LIABILITY**

4 **Q. WHY IS IT NECESSARY FOR THE KCC TO RECOGNIZE A REGULATORY**  
5 **LIABILITY FOR THE NON-LEGAL COST OF REMOVAL AND**  
6 **DISMANTLEMENT AMOUNTS?**

7 A. Although the FERC has recognized and identified the amounts involved, FERC does not  
8 require reporting the non-legal AROs as regulatory liabilities. FERC deferred to the  
9 states regarding specific recognition of a regulatory liability for ratemaking purposes.  
10 Consequently, while FERC Order No. 631 provides a new transparency by requiring  
11 identification of the amounts and maintenance of separate subsidiary records for  
12 regulatory analysis and rate setting purposes, it did not specifically recognize a regulatory  
13 liability for non-legal asset retirement obligations.

14 From a regulatory and ratemaking standpoint, nothing holds Atmos specifically  
15 accountable for these excess collections, even though the public accounting profession  
16 and the Securities and Exchange Commission recognize that they are regulatory liabilities  
17 and that the KCC implicitly holds Atmos accountable.

18 Regardless of the transparency provided by FERC, Atmos does not identify or  
19 even mention these requirements or the issue in its depreciation study. This is an  
20 intolerable situation. The accountability must be explicit, and the KCC must establish  
21 that accountability.

22 Even if it was highly probable that Atmos might spend all this money for future  
23 cost of removal, it is fair and reasonable for the KCC to recognize the ratepayers’ claims

---

<sup>11</sup> FERC Docket No. RM02-7-000, Order No. 631, paragraph 38.

1 on these monies until actually spent on their intended purpose. Unless they are explicitly  
2 identified as “subject to refund,” there is an ongoing and wholly unnecessary risk that  
3 they are merely hidden potential income to Atmos.

4 **Q. DOES ATMOS HAVE ANY LEGAL OBLIGATIONS TO INCUR THE NON-**  
5 **LEGAL ARO COSTS?**

6 A. No, Atmos’s non-legal AROs do not even meet baseline tests as liabilities to incur asset  
7 removal costs. The KCC, therefore, should recognize the excess collections as regulatory  
8 liabilities owed to ratepayers unless and until Atmos spends the funds on their intended  
9 purpose.

10 The KCC should require Atmos to explicitly identify and report this intrastate  
11 regulatory liability and all related activity in all future reports, rate cases and depreciation  
12 studies that it files with the KCC. Explicit recognition of this amount as an intrastate  
13 regulatory liability in Atmos’s future annual reports will provide transparency concerning  
14 these amounts. Without a requirement for separate identification and reporting of these  
15 amounts, they are hidden from the ratemaking and regulatory process in Kansas.

16 **Q. WOULD IT BE SUFFICIENT TO REPORT THE ITEM AS A “DEFERRED**  
17 **CREDIT”?**

18 A. No, treatment as a deferred credit would fail to address the core issue – these are costs  
19 recovered for a particular purpose and, if not used for that purpose, will result in future  
20 rates being decreased, as described in SFAS No. 71, ¶11. Atmos could easily assert in  
21 the future that ratepayers have no claim to a deferred credit. The KCC must specifically  
22 recognize and require reporting by Atmos as a regulatory liability for regulatory and

1       ratemaking purposes. Otherwise, Atmos will identify the amounts as accumulated  
2       depreciation for regulatory accounting purposes.

3       **Q.   WHAT IS WRONG WITH CONTINUING TO RECORD THE REGULATORY**  
4       **LIABILITY AS ACCUMULATED DEPRECIATION?**

5       A.   Atmos and all utilities consider accumulated depreciation to represent a measure of their  
6       capital they have recovered from their ratepayers. As simplistic as it sounds, utilities  
7       consider any amount in accumulated depreciation to be “their money” even if they  
8       collected it for a fictitious future cost.

9       **Q.   IS IT TRUE THAT ACCUMULATED DEPRECIATION IS A RATE BASE**  
10       **DEDUCTION AND THEREFORE RATEPAYERS ARE BETTER OFF DUE TO**  
11       **THAT FACT?**

12      A.   This is a false distinction between the two approaches. Accumulated depreciation is  
13       indeed a rate base deduction. A regulatory liability also can (and should) be a rate base  
14       deduction.

15      **Q.   WHAT IS THE APPROPRIATE TREATMENT OF ATMOS’S NON-LEGAL**  
16       **ARO REGULATORY LIABILITY?**

17      A.   The KCC should separate Atmos’s non-legal ARO regulatory liability from accumulated  
18       depreciation. The appropriate accounting entry is a debit to account 108 - Accumulated  
19       depreciation and an equivalent credit to account 254 – Other regulatory liabilities.

20      **Q.   HAS THE KCC EVER ORDERED REGULATORY LIABILITY TREATMENT**  
21       **FOR NON-LEGAL AROS IN A PRIOR PROCEEDING?**

22      A.   Yes, in Docket No. 05-WSEE-981-RTS the KCC ordered regulatory liability treatment  
23       for terminal cost of removal which is also a non-legal ARO. The KCC said:

1 The regulatory liability imposed on terminal net salvage is a  
2 significant factor. Majoros seemed to be concerned that even with  
3 a regulatory liability, an alternative regulatory scheme may allow  
4 Westar to divert the funds collected for terminal net salvage. The  
5 Commission reminds the parties that its intent in tracking the  
6 terminal net salvage values separately and determining that the  
7 amounts should be considered a liability is to establish the fact that  
8 Westar has an obligation to refund to ratepayers any amount of  
9 terminal net salvage not used for demolishing, dismantlement or  
10 otherwise removing plant. The point is this: The regulatory  
11 liability will track these funds collected for terminal net salvage  
12 and will ensure that when Westar dismantles existing plant to make  
13 room for additional generation, the cost of that dismantlement will  
14 not be capitalized and added to rate base.<sup>12</sup>  
15

16 **THE KCC SHOULD CONSIDER DISPOSING OF THE EXISTING REGULATORY**  
17 **LIABILITY**

18 **Q. WHAT SHOULD THE KCC DO WITH ATMOS'S REGULATORY LIABILITY**  
19 **ON A GOING-FORWARD BASIS?**

20 A. There are a number of alternatives to the treatment of the regulatory liability on a going-  
21 forward basis. The KCC could require continued maintenance as a permanent rate base  
22 offset representing customer-provided capital, or amortization back to ratepayers over  
23 some specified amortization period. I recommend an amortization, because I do not  
24 believe Atmos will ever spend all of this money on future cost of removal. An  
25 amortization would reduce annual depreciation expense over the amortization period. On  
26 the other hand, I am proposing a going-forward future cost of removal allowance to  
27 ensure Atmos is kept whole.

28 **Q. WHAT AMORTIZATION PERIOD DO YOU RECOMMEND?**

---

<sup>12</sup> I/M/O Westar Energy, Docket No. 05-WSEE-981-RTS, Order on Petitions for Reconsideration and Clarification, Issued February 13, 2006, p. 49.

1 A. I recommend the Commission amortize the balance over the composite remaining life of  
2 Atmos's plant. This will have negligible revenue requirement effects because such  
3 amortization is taking place anyway by virtue of remaining life depreciation rates. In  
4 other words, the reclassification of the regulatory liability out of accumulated  
5 depreciation essentially increases the depreciation expense by an amount equivalent to  
6 the remaining life amortization. Hence, the entire regulatory liability and amortization  
7 issue is a revenue requirement wash, but it provides needed protection for ratepayers.

8 **Q. IS THE AMORTIZATION A FORM OF RETROACTIVE RATEMAKING?**

9 A. No.

10 **THE KCC SHOULD CHANGE THE MECHANISM THAT CREATED ATMOS'S**  
11 **REGULATORY LIABILITY**

12 **Q. HAS MR. ROFF INCLUDED A PROVISION FOR ESTIMATED FUTURE COST**  
13 **OF REMOVAL IN HIS PROPOSED DEPRECIATION RATES?**

14 A. Yes, he has.

15 **Q. HOW MUCH NON-LEGAL ARO COST HAS MR. ROFF INCLUDED IN**  
16 **ATMOS'S ANNUAL DEPRECIATION EXPENSE?**

17 A. Based on September 30, 2006 balances the amount is \$1.4 million for Kansas plant.<sup>13</sup> He  
18 has included no cost of removal in his Shared Services rates.

19 **Q. WHAT IS ATMOS'S ACTUAL EXPERIENCE?**

20 For the period from 2002 through 2006, the actual average was \$616 thousand for Kansas  
21 plant.<sup>14</sup> Nevertheless, Mr. Roff proposes to charge \$1.4 million per year for cost of  
22 removal collections. If this pattern continues, the regulatory liability will continue to

---

<sup>13</sup> Calculated from Atmos response to CURB-168.

<sup>14</sup> For the period 2002-2006, the SSU plant experienced an average of \$621 in cost of removal, all related to a 2004 retirement in account 397.

1 grow at an exponential rate. That is because Mr. Roff's approach applies an excessive  
2 rate to an ever-growing gross plant balance; however, actual cost of removal is in reality  
3 a function of annual plant additions. Mr. Roff's accruals will exceed actual cost of  
4 removal indefinitely.

5 **Q. WHAT IS YOUR OPINION ABOUT THE INCORPORATION OF ESTIMATED**  
6 **FUTURE COST OF REMOVAL IN DEPRECIATION RATES?**

7 A. I do not object to including future cost of removal estimates in depreciation rates as long  
8 as the resulting charges are just and reasonable and reflect current activity. On the other  
9 hand, a Company has a special burden to justify charging ratepayers today for any  
10 speculative future cost thirty to forty years from now. In this case, Atmos proposes to  
11 charge inflated future cost estimates to today's ratepayers, but will not even agree that it  
12 has a refundable obligation to ratepayers for any excess charges over and above its actual  
13 cost of removal expenditures. Atmos will not even acknowledge a \$10.2 million  
14 regulatory liability for its past over collections.<sup>15</sup>

15 **Q. REGARDING YOUR REFERENCE TO A "SPECIAL BURDEN," HOW ARE**  
16 **NORMAL EXPENSES ESTIMATED IN A RATE CASE?**

17 A. An extrapolation of recent historical costs into the near-term future is a reasonable  
18 approach for most normal ongoing operation and maintenance expenses, but even those  
19 extrapolations are subject to challenge and rationalization. A utility must demonstrate  
20 that charging such costs to ratepayers is just and reasonable.

21 **Q. IS THIS APPROACH AVAILABLE FOR COST OF REMOVAL?**

22 A. Yes, Atmos maintains its actual expenditures for cost of removal. Consequently, those  
23 costs can be extrapolated into the near-term future. Mr. Roff, however, has employed

---

<sup>15</sup> Response to CURB Data Request No. 180.

1 another approach to increase the normal charges to today's ratepayers for future cost of  
2 removal.

3 **ATMOS'S APPROACH TO FUTURE COST OF REMOVAL**

4 **Q. WHAT CAUSES ATMOS'S CHARGES FOR FUTURE COST OF REMOVAL TO**  
5 **BE SO EXCESSIVE?**

6 A. Atmos's charges for future cost of removal are excessive due to the process it uses to  
7 derive these estimates and then convert them into depreciation expense. The process  
8 results in inflated annual charges for future cost of removal that vastly exceed actual  
9 expenditures.

10 Atmos bundles the inflated cost of removal factors in most of its depreciation  
11 rates, and then applies those rates for years to an ever-expanding depreciable plant base.  
12 This latter feature results in a double-inflationary effect. The factors are inflated and then  
13 they are applied to plant balances which also increase with inflation.

14 The accruals resulting from this approach have vastly exceeded, year-by-year, the  
15 money that Atmos actually spent or allocated for cost of removal, thus producing the  
16 \$10.2 million regulatory liability – from charges to Kansas ratepayers.

17 **Q. HOW DOES ATMOS'S APPROACH RESULT IN INFLATED COST OF**  
18 **REMOVAL FACTORS?**

19 A. Atmos's net salvage studies relate removal costs in current dollars to asset retirements  
20 expressed in very old historical original cost dollars. The inflation experienced between  
21 the asset's in-service date and its retirement date results in current removal cost dollars  
22 that are many multiples of the historical original cost dollars of the retired asset.

1 **Q. DOES ATMOS'S APPROACH RESULT IN AN INCREASE TO DEPRECIATION**  
2 **RATES?**

3 A. Yes, it does. Any cost of removal factor will increase a depreciation rate. Atmos's  
4 inflated cost of removal factors will increase depreciation rates even more, and then will  
5 produce yet higher charges when applied to increasing plant balances.

6 **Q. DOES MR. ROFF SPECIFICALLY ADDRESS THE ISSUE OF INCLUSION OF**  
7 **INFLATED COST OF REMOVAL FACTORS IN DEPRECIATION RATES?**

8 A. Yes. At page 6 of his Direct Testimony, Mr. Roff offers the following quote, which he  
9 states was taken from the 1996 Edition of the NARUC Public Utility Depreciation  
10 Practices manual.

- 11 • Net salvage is expressed as a percentage of plant retired  
12 by dividing the dollars of net salvage by the dollars of  
13 original cost of plant retired.
- 14
- 15 • The goal of accounting for net salvage is to allocate the  
16 net cost of an asset to accounting periods, making due  
17 allowance for the net salvage, positive or negative, that  
18 will be obtained when the asset is retired.
- 19
- 20 • This concept carries with it the premise that property  
21 ownership entails the responsibility for the property's  
22 ultimate abandonment or removal.<sup>16</sup>
- 23
- 24 • This treatment of salvage is in harmony with generally  
25 accepted accounting practices and tends to remove from  
26 the income statement fluctuations caused by erratic,  
27 although necessary, abandonment and removal  
28 operations.<sup>17</sup>
- 29

30 **Q. WHY DID MR. ROFF INCLUDE THIS QUOTATION IN HIS TESTIMONY?**

31 A. Mr. Roff states that:

---

<sup>16</sup> Roff Direct Testimony, p. 6. Taken from Public Utility Depreciation Practices, NARUC, August 1996 Edition, p. 18.

<sup>17</sup> Id., emphasis added.

1 This quotation is important because it addresses several key  
2 accounting and ratemaking issues concerning the treatment of  
3 net salvage as a component of depreciation. First and  
4 foremost, net salvage is an appropriate component of  
5 depreciation.<sup>18</sup>  
6

7 **Q. DO YOU AGREE WITH THIS QUOTATION AS MR. ROFF HAS PROVIDED**  
8 **IT?**

9 A. No, I do not. Mr. Roff has quoted the 1996 NARUC manual correctly with the exception  
10 of one key word; he used the word “**practices**” in the second paragraph. This is an  
11 incorrect quote and an important one.

12 **Q. WHY IS THE DIFFERENCE IN WORDS IMPORTANT?**

13 A. The word “practices” is used in a similar quote appearing in the 1968 NARUC manual.  
14 Mr. Roff has used the 1968 version of the quote in the past, and I have specifically  
15 commented on his choice to use that version of the quote. In Atmos’s recent Kentucky  
16 case, Case No. 2006-00464, when asked why he quoted the 1968 NARUC Manual  
17 instead of the 1996 Edition, Mr. Roff stated that essentially the same quote appeared in  
18 the 1996 Edition.<sup>19</sup> In this case he has updated the quote to match the 1996 Edition, with  
19 the exception of the very word I challenged in the Kentucky case.

20 The 1996 Edition claims that Mr. Roff’s treatment of net salvage “is in harmony  
21 with generally accepted accounting *principles*” rather than “generally accepted  
22 accounting *practices*” as was used in the 1968 Edition. Mr. Roff was employed for many  
23 years by a major international accounting firm and he is well aware of the concept of  
24 *generally accepted accounting principles* (“GAAP”). The subtle but salient point about  
25 Mr. Roff’s continued use of the words “generally accepted accounting practices” is that

---

<sup>18</sup> Roff Direct Testimony, Page 6.

<sup>19</sup> KY Case No. 2006-00464, Roff response to Staff DR Item 2-26, provided as Exhibit\_\_\_\_(MJM-1) to the direct testimony of Michael J. Majoros.

1 they are not GAAP. Nor is Mr. Roff's use of cost of removal factors in depreciation  
2 rates. Notwithstanding the NARUC's 1996 claim, GAAP depreciation rates have never  
3 allowed cost of removal factors in depreciation rates and SFAS No. 143 most recently  
4 affirmed this. Thus, Mr. Roff's use of a quotation implying that his approach is in  
5 harmony with GAAP is incorrect.

6 **Q. WHAT IS AT THE HEART OF NARUC'S THINKING REGARDING THE**  
7 **ABOVE QUOTE?**

8 A. The matching principle is at the heart of NARUC's thinking. NARUC focuses on the  
9 timing or pattern of cost of removal allocation and intergenerational equity.  
10 Unfortunately, NARUC does not address the fundamental questions of whether a  
11 company will actually incur the costs, and the intergenerational inequity of charging  
12 these inflated amounts to ratepayers when there is some doubt that the money will ever  
13 be spent on cost of removal, and the inflation element is so overstated. Again, it is worth  
14 noting that even the 1996 NARUC manual pre-dates SFAS No. 143. Thus, it reflects  
15 earlier deliberations, and did not consider, or even know about the huge regulatory  
16 liabilities emanating from the use of this approach.

17 **Q. HAS ANYBODY ADDRESSED THESE FUNDAMENTAL QUESTIONS?**

18 A. Yes, FASB addressed the fundamental questions in SFAS No. 143. The matching  
19 principle is in harmony with GAAP when the future costs are genuine obligations and are  
20 recognized at their fair value. However, the matching principle of accounting does not  
21 require allocation of an inflated future expenditure for which there is no liability to any  
22 accounting period.

1 NARUC focuses on an objective of achieving a particular expense recognition  
2 pattern rather than the need to recognize whether or not an actual obligation and liability  
3 exists. In paragraph B21, SFAS 143 specifically addresses the tendency to focus on the  
4 expense pattern rather than the reality of the cost, and the problems that can result:

5 B21. Prior to this Statement, the objective of many  
6 accounting practices was not to recognize and measure  
7 obligations associated with the retirement of long-lived assets.  
8 Rather, the objective was to achieve a particular expense  
9 recognition pattern for those obligations over the operating  
10 life of the associated long-lived asset. Using that objective,  
11 some entities followed an approach whereby they estimated an  
12 amount that would satisfy the costs of retiring the asset and  
13 accrued a portion of that amount each period as an expense  
14 and a liability. Other entities used that objective and the  
15 provision in paragraph 37 of FASB Statement No 19,  
16 *Financial Accounting and Reporting by Oil and Gas*  
17 *Producing Companies*, that allows them to increase periodic  
18 depreciation expense by increasing the depreciable base of a  
19 long-lived asset for an amount representing estimated asset  
20 retirement costs. Under either of those approaches, the  
21 amount of liability or accumulated depreciation recognized in  
22 a statement of financial position usually differs from the  
23 amount of obligation that an entity actually has incurred. In  
24 effect, by focusing on an objective of achieving a particular  
25 expense recognition pattern, accounting practices developed  
26 that disregarded or circumvented the recognition and  
27 measurement requirements of FASB Concepts Statements.<sup>20</sup>  
28

29 The process focuses on achieving a particular expense pattern rather than “recognition  
30 and measurement requirements,” that is, the reality of the cost. Thanks to SFAS No. 143,  
31 we now know that Mr. Roff’s inflated future removal cost estimates do not meet baseline  
32 tests as liabilities.

33 **Q. WHY DO YOU SAY THAT MR. ROFF’S INFLATED FUTURE COST OF**  
34 **REMOVAL ESTIMATES DO NOT MEET BASELINE TESTS AS LIABILITIES?**

---

<sup>20</sup> Id., paragraph B21, (emphasis supplied).

1 A. Atmos does in fact have certain costs that meet these baseline tests. There are assets for  
2 which Atmos has identified legal asset retirement obligations (“AROs”) as defined by  
3 SFAS No. 143. They are discussed in the Company’s 2007 10-K Report.<sup>21</sup>

4 On the other hand, using Mr. Roff’s proposals and approach, Atmos has collected,  
5 and will continue to collect, unchecked, estimates of future cost of removal relating to the  
6 rest of its plant for which it does not have any such legal retirement obligation. These are  
7 the non-legal AROs. Atmos does not have any probable obligation to make these  
8 expenditures, as “probable” is used in SFAS No. 143. They therefore do not meet the  
9 definition of a liability.<sup>22</sup>

10 All that is necessary to create a legal obligation is for Atmos to promise the  
11 Commission and the public at large that it will do the work, incur the cost, and spend the  
12 money it collects for that cost on that cost.

13 As evident from its response to CURB Data Request No. 187, Atmos seems  
14 unwilling to make the promise necessary to create a legal obligation for its cost of  
15 removal collections.

16 **Data Request:** Does Atmos promise to remove each asset for  
17 which it is collecting cost of removal and does it promise to  
18 spend all of the money it is collecting for cost of removal, on  
19 cost of removal? Please explain.

20 **Response:** The company will continue to remove assets  
21 that need to be removed in the course of providing gas utility  
22 service. Also, see the response to data request CURB-186.<sup>23</sup>  
23

---

<sup>21</sup> Atmos Energy, September 30, 2007 10-K Report, p. 72.

<sup>22</sup> SFAS No. 143, paragraph 4. “Liabilities are *probable* future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events. Probable is used with its general meaning, rather than in a specific accounting or technical sense (such as Statement 5, par.3), and refers to that which can be reasonably expected or believed on a basis of available evidence or logic but neither certain nor proved (Webster’s New World Dictionary, p.1132). Its inclusion in the definition is intended to acknowledge that business and other economic activities occur in an environment characterized by uncertainty in which few outcomes are certain.”

<sup>23</sup> See response to CURB Data Request No. 187.

1 Atmos's response to CURB Data Request No. 187 is not sufficient to establish legal  
2 AROs or inflated future cost of removal ratios. Atmos's response to CURB Data Request  
3 No. 187 is sufficient, however, to adopt reasonable cost of removal factors for inclusion  
4 in its depreciation rates.

5 **Q. WHY DO YOU RECOMMEND DISCONTINUATION OF ATMOS'S**  
6 **APPROACH?**

7 A. The inflationary and orders of magnitude mismatches inherent in Atmos's approach have  
8 resulted in the build-up of it's \$10.2 million regulatory liability, and excessive cost of  
9 removal collections on an annual basis; but the problems do not end there.<sup>24</sup>

10 There is little, if any, relationship between the cost of removal and retirements  
11 amounts in Atmos's studies. Furthermore, the data is unreliable, it is typically sporadic,  
12 and entirely subject to the control of Atmos's accounting department.

13 **Q. WHY IS THERE LITTLE OR NO RELATIONSHIP BETWEEN THE COST OF**  
14 **REMOVAL AND THE RETIREMENT AMOUNTS IN ATMOS'S STUDIES?**

15 A. A majority of Atmos's retirements result from replacements. Atmos determines a need to  
16 replace assets in conjunction with its obligation to provide service. When it is  
17 determined that assets should be replaced, Atmos estimates the entire replacement cost,  
18 and then allocates a portion of the replacement cost to cost of removal. Each such  
19 allocation is unique to the replacement at hand. The cost of removal in Atmos's studies  
20 is a function of and derived directly from plant additions - not retirements.

21 Most of the retirements in Atmos's studies are after-the-fact accounting entries,  
22 bearing little if any relationship at all to the recorded cost of removal. It is doubtful that

---

<sup>24</sup> As I stated earlier, in my opinion the \$1.7 million figure is understated.

1 the cost of removal in any given year relates in anyway to the retirements recorded in that  
2 year.

3 **Q. WHY DO YOU SAY THE DATA IN THE ATMOS'S STUDIES IS**  
4 **UNRELIABLE?**

5 A. Not only is the data sporadic in many instances, it is subject to the control of the  
6 accounting department. Changes in accounting procedures impact what is reported as  
7 cost of removal. Furthermore, significant portions of the recorded cost of removal are the  
8 results of allocations. All allocation factors are at least somewhat arbitrary.  
9 Consequently, it is reasonable to assume that two independent estimators reviewing the  
10 same project could reach different conclusions concerning the portion of a replacement  
11 project to be allocated to cost of removal.

12 **Q. DO YOU CONSIDER THE AMOUNTS IN ATMOS'S STUDIES TO BE**  
13 **UNRELIABLE?**

14 A. I assume that once allocated or assigned, Atmos has properly recorded the amounts, but  
15 sporadic figures resulting from arbitrary allocations are unreliable for use in a procedure  
16 designed to collect huge amounts of money in advance from ratepayers, particularly  
17 when the Company's management will not even commit to spending the money for its  
18 ostensible purpose.

19 **GOING-FORWARD COST OF REMOVAL RECOMMENDATIONS**

20 **Q. WHAT DO YOU RECOMMEND?**

21 A. On a going-forward basis, I recommend the elimination of the existing inflated cost of  
22 removal ratios and the adoption of a normalized cost of removal allowance based on  
23 Atmos's recent actual experience. In my opinion, the normalized allowance approach is

1 consistent with the principles and concepts manifested in both SFAS No. 143 and Order  
2 No. 631.

3 **Q. WHY IS THIS APPROACH CONSISTENT WITH SFAS NO. 143 PRINCIPLES?**

4 A. Because the amount is the estimate of the net present value of future cost of removal.

5 **Q. WHY IS IT CONSISTENT WITH ORDER NO. 631?**

6 A. Because it is a separate identifiable amount.

7 **Q. PLEASE EXPLAIN YOUR RECOMMENDATION FOR A NORMALIZED COST**  
8 **OF REMOVAL ALLOWANCE.**

9 A. In the normalized cost of removal allowance approach the annual average cost of removal  
10 is included as a specifically identifiable amount within the annual depreciation accrual.  
11 In other words, a normalized cost of removal amount is still a component of the  
12 depreciation expense accrual and is credited to accumulated depreciation and actual cost  
13 of removal continues to be charged to accumulated depreciation.

14 **Q. IS THE ANNUAL COST OF REMOVAL ACCRUAL A FIXED AMOUNT?**

15 A. The annual allowance could be either a fixed amount or a rolling five-year average  
16 amount.

17 **Q. WHY ARE YOU RECOMMENDING A COST OF REMOVAL ALLOWANCE AS**  
18 **OPPOSED TO A NET SALVAGE ALLOWANCE?**

19 A. I have recommended a cost of removal allowance because SFAS No. 143 specifically  
20 relates to cost of removal collections. In calculating my recommended depreciation rates  
21 for Atmos I have incorporated Mr. Roff's proposed gross salvage ratios.

1   **Q.    HAVE OTHER JURISDICTIONS APPROVED THE NORMALIZED COST OF**  
2       **REMOVAL ALLOWANCE APPROACH, OR A NORMALIZED NET SALVAGE**  
3       **ALLOWANCE APPROACH?**

4    A.    The net salvage allowance method has been adopted in several New Jersey rate cases in  
5       which I participated. In Rockland Electric Company's 2002 rate case, the New Jersey  
6       Board of Public Utilities ("BPU") endorsed my testimony regarding SFAS No. 143, but  
7       used a net salvage allowance based on the average net salvage over a 10-year period, as  
8       recommended by Staff, instead of the five-year average I recommended.<sup>25</sup> In Jersey  
9       Central Power & Light Company's 2002 rate case, the BPU agreed with me that the  
10      inclusion of net salvage in depreciation rates was inappropriate. It adopted my  
11      recommendation of a \$4.8 million net salvage allowance, based on the cost of removal  
12      included in JCP&L's test year budget for transmission, distribution and general plant.<sup>26</sup>  
13      As agreed to in the settlement of their last rate case, Atlantic City Electric Company also  
14      uses the net salvage allowance method to accrue net salvage.<sup>27</sup> However, their previous  
15      rates did not have a provision for net salvage at all. In Public Service Electric and Gas  
16      Company's most recent electric case, I recommended retention of the existing 2.49  
17      percent composite rate. Some of the parties originally stipulated to a 2.75 percent rate,  
18      but the BPU rejected the stipulation and adopted my 2.49 percent recommendation. That

---

<sup>25</sup> I/M/O Rockland Electric Company, KCC Docket Nos. ER02080614 and ER02100724, Initial Decision, June 10, 2003 and Summary Order, July 31, 2003.

<sup>26</sup> I/M/O Jersey Central Power & Light Company, KCC Docket Nos. ER0208056, ER0208057, EO02070417 and ER02030173, Summary Order, August 1, 2003.

<sup>27</sup> I/M/O Atlantic City Electric Company, KCC Docket Nos. ER03020110, ER04060423, EO03020091 and EM02090633, Decision and Order Adopting Initial Decision and Stipulation of Settlement, May 26, 2005.

1 rate, which the Company calculated in a previous case, did not have a provision for net  
2 salvage.<sup>28</sup>

3 **Q. HAVE ANY OTHER COMMISSIONS ACCEPTED THE NORMALIZED NET**  
4 **SALVAGE ALLOWANCE APPROACH?**

5 A. Yes, the Pennsylvania Public Utility Commission uses the normalized net salvage  
6 allowance as a matter of course. Most recently, the Delaware Public Service  
7 Commission adopted the normalized net salvage allowance approach based on the five-  
8 year average for Delmarva Power & Light, the largest electric utility in that state.

9 **Q. HAVE YOU INCORPORATED A 5-YEAR NORMALIZED COST OF**  
10 **REMOVAL ALLOWANCE IN YOUR DEPRECIATION**  
11 **RECOMMENDATIONS?**

12 A. Yes, Exhibit\_\_\_(MJM-2) summarizes my recommendations. I have removed Mr. Roff's  
13 proposed future cost of removal factors from his proposed depreciation. The result is  
14 "plant-only" or "capital recovery" depreciation rates. This yields annual plant-only  
15 depreciation, based on September 30, 2006, plant balances of \$4.7 million for Kansas  
16 property. To that amount, I have added a \$400 thousand annual cost of removal  
17 allowance based on Atmos's average actual experience for the five years ending  
18 December 31, 2006. This yields total annual depreciation of \$5.2 million, which is less  
19 than Mr. Roff's amount by \$3.5 million. Mr. Roff's proposed rates for Shared Services  
20 did not include any provision for future cost of removal.

---

<sup>28</sup> I/M/O Public Service and Gas Company, KCC Docket No. ER02050303, Decision and Order, Issued April 22, 2004.

1 **EQUAL LIFE GROUP**

2 **Q. WOULD YOU PLEASE EXPLAIN MR. ROFF'S PROPOSAL TO ADOPT AND**  
3 **RETROACTIVELY APPLY THE EQUAL LIFE GROUP ("ELG") PROCEDURE**  
4 **TO ALL VINTAGES?**

5 A. Yes. Prior to the adoption of Mr. Roff's depreciation rates as part of the Settlement in  
6 Docket No. 03-ATMG-1036-RTS, the Company's depreciation rates reflected the use of  
7 the broad group ("BG") or Average Life Group procedure ("ALG"). In that Docket, Mr.  
8 Roff proposed a retroactive change to the Equal Life Group procedure. All of these are  
9 weighting procedures used to calculate an average remaining life. The ELG procedure  
10 had not been used previously in Kansas by Atmos. Although the stipulated rates were  
11 calculated using ELG, the procedure was not specifically adopted for Atmos' Kansas  
12 property. As discussed below, retroactive application of ELG leads to a large initial  
13 increase in depreciation due to the prior use of the BG/ALG procedure. Therefore, such a  
14 change should only be made on a going-forward basis.

15 **Q. PLEASE SUMMARIZE THE DIFFERENCES BETWEEN THE AVERAGE LIFE**  
16 **GROUP PROCEDURE AND THE EQUAL LIFE GROUP PROCEDURE.**

17 A. A broad group average service life relates to the entire account. The ALG procedure  
18 develops a single average depreciation rate which can be applied without change over the  
19 entire life of an account. For example, assume the broad group average service life for  
20 Account 376, Mains is estimated to be thirty years. The BG/ALG procedure would result  
21 in a 3.33 percent depreciation rate (1/30) designed to recover the entire investment in  
22 Mains, i.e., those retired prior to the attainment of the thirty-year average service life as  
23 well as those in service beyond the thirty-year average service life.

1           Mr. Roff's primary challenge to the ALG procedure is the averaging explicitly  
2 reflected in its use, i.e., the assumption that overrecovery of assets retired beyond the  
3 average service life of the group will offset underrecovery of assets retired before the  
4 average service life of the group. This is an undeniable assumption in the ALG  
5 procedure. In the example above, ALG depreciation would assume that the  
6 underrecoveries would be offset by overrecoveries of mains living well beyond the  
7 average service life; but the fundamental assumption under ALG is full recovery.

8           The ELG procedure statistically disaggregates the anticipated retirements within a  
9 vintage and then effectively establishes separate depreciation rates for each of the various  
10 individual life groups. In the mains example, separate rates would be established for the  
11 retirements anticipated to be incurred each year.

12 **Q.    WOULD YOU SUMMARIZE THE PROS AND CONS REGARDING ELG AND**  
13 **ALG?**

14 A.    Yes. From a theoretical standpoint, ELG has the benefit of providing a more precise cost  
15 allocation, assuming perfect foresight. On the other hand, ELG requires annual  
16 depreciation rate changes and produces precisely the wrong answer as a result of  
17 forecasting inaccuracies. The BG/ALG, procedure, which I have used, has the benefit of  
18 a constant depreciation rate, and also in my opinion, a higher probability of producing a  
19 correct overall result notwithstanding forecasting inaccuracies. On the other hand, ALG  
20 is premised on the averaging concept of offsetting underrecoveries with overrecoveries.

21 **Q.    IS ELG NECESSARY?**

1 A. ELG is not necessary. Both ALG and ELG assume full recovery. From a theoretical  
2 standpoint, ELG has merit but so does ALG. From a practical standpoint, ELG will  
3 produce a depreciation expense increase.

4 **Q. DO YOU RECOMMEND THAT ELG BE ADOPTED FOR USE BY ATMOS IN**  
5 **KANSAS?**

6 A. No. As discussed above, ELG has theoretical merit; however, it has negative aspects, as  
7 well. Furthermore, it is not necessary.

8 **Q. IF THE COMMISSION WERE TO ADOPT ELG FOR ATMOS, DO YOU**  
9 **AGREE WITH MR. ROFF'S IMPLEMENTATION PROPOSAL?**

10 A. No. Mr. Roff proposes to retroactively apply ELG to all prior vintages of plant in a  
11 composite calculation, and then use the resulting ELG-based composite remaining life in  
12 a remaining life rate calculation. In the prior case, where I accepted all of Mr. Roff's  
13 lives, I calculated that his retroactive implementation of ELG caused an approximately  
14 \$1.09 million increase to depreciation expense.<sup>29</sup> The resulting abrupt depreciation  
15 expense increase was caused primarily by the fact that ELG had never been used in the  
16 past. Had ELG always been used, Atmos's recorded book reserves would have been  
17 substantially higher as a result of the use of higher depreciation rates in the past. That is  
18 because ELG produces a pattern of depreciation rates which are very similar in nature to  
19 accelerated depreciation; double-declining balance is an example.

20 The depreciation reserve level is a critical element in the calculation of remaining  
21 life rates: the higher the reserve, the lower the rate. Conversely, the lower the reserve, the  
22 higher the rate. Mr. Roff's application of ELG to all prior vintages produces a composite  
23 remaining life for those vintages which is inconsistent with actual past depreciation

---

<sup>29</sup> Docket No. 03-ATMG-1036-RTS, Direct Testimony of Michael J. Majoros, Jr., page 5.

1 practices. The practical consequence is that Mr. Roff's implementation proposal creates  
2 a significant depreciation reserve deficiency resulting merely from a change in the  
3 depreciation grouping procedure.

4 The most well-known application of the ELG procedure is in the  
5 telecommunications industry. Many FCC subject companies made similar proposals for  
6 retroactive application of ELG, and all were summarily rejected. They were rejected due  
7 to the reserve situations described above, as well as the fact that ELG creates a spike in  
8 revenue requirements, just as Mr. Roff's proposal did in the last proceeding. The FCC's  
9 initial approach to ELG implementation was to allow it only on a going-forward vintage  
10 basis and furthermore, to phase it in by groups of accounts over a series of years. At one  
11 point, the FCC was allowing implementation of ELG by applying it to one-half of the  
12 gross additions for the year immediately following the study date. For example, if a  
13 study was dated December 31, 1990, ELG would be allowed on one-half of the estimated  
14 1991 additions. That practice was abandoned and any carrier subsequently applying for  
15 ELG would not see its effects until its study actually contained ELG vintages. For  
16 example, if ELG was approved as a result of a 1990 study, the first ELG vintage would  
17 be 1991. The Company would receive the benefit either in its next regularly scheduled  
18 depreciation study or in a technical update.

19 **Q. IF ELG IS APPROVED, WHAT DO YOU RECOMMEND?**

20 A. If ELG is approved, I recommend that it not be applied retroactively. If ELG is  
21 approved, I recommend that the FCC's approach be adopted, i.e., the first ELG vintage  
22 would be 2006 for the purposes of the next depreciation study. I also recommend that

1 Atmos be required to file depreciation studies every three (3) years to ensure that the  
2 ELG rates are properly managed.

3 **Q. HAVE YOU CALCULATED NEW REMAINING LIVES USING THE ALG**  
4 **PROCEDURE INSTEAD OF MR. ROFF'S PROPOSED ELG?**

5 A. Yes. My remaining life calculations are included in Exhibit\_\_\_\_(MJM-3), which is my  
6 depreciation study.

7 **ASSET LIVES AND CURVES**

8 **Q. HAVE YOU ACCEPTED ALL OF THE COMPANY'S PROPOSED LIVES AND**  
9 **CURVES?**

10 A. No. As stated in the beginning of my testimony, I have accepted most of the lives and  
11 curves on which Mr. Roff based his depreciation rates. I disagree with his proposed lives  
12 and curves for accounts 380 – Services, 381 – Meters, and 382 – Meter Installations.

13 **Q. PLEASE EXPLAIN HOW MR. ROFF CONDUCTED HIS ANALYSES.**

14 A. According to his testimony, Mr. Roff used both the Actuarial method and the Simulated  
15 Plant Records-Balances method ("SPR") of life analysis to study plant activity and arrive  
16 at his service life estimates. The Actuarial method relies on aged plant and retirement  
17 data to generate an observed life table ("OLT"), which is then fit, using the least squares  
18 approach, to various Iowa Curves to obtain an estimate of the pattern of retirements  
19 around the average service life. This method was used only for the accounts for which  
20 aged data was available. The SPR method was used for accounts for which the plant data  
21 is question was not "aged", meaning, the age of retirements is not known.

22 **Q. WHAT ARE IOWA CURVES?**

1 A. Iowa Curves are a set of predefined curves developed at Iowa State University to study  
2 plant lives and retirement patterns. They are designated as “R” right, “S” symmetrical,  
3 “L” left and “O” original. These designations identify the modal frequency of  
4 retirements relative to the average service life. For example, an R-curve indicates that the  
5 modal frequency of retirements will occur to the right of the average service life. These  
6 letters are also combined with subscripts indicating the range of dispersion from wide (1)  
7 to narrow (5).

8 **Q. DID YOU REVIEW MR. ROFF’S ANALYSES?**

9 A. Yes, I did.

10 **Q. DID YOU CONDUCT YOUR OWN ANALYSES?**

11 A. Yes. I used Mr. Roff’s data to conduct my own actuarial and SPR analyses, as well as  
12 GMT analyses. I then compared my results with Mr. Roff’s proposals to check the  
13 reasonableness of his proposed lives and curves.

14 **Q. PLEASE EXPLAIN WHERE YOU DIFFER FROM MR. ROFF.**

15 A. As I mentioned above, I disagree with three of Mr. Roff’s proposed lives. My analyses  
16 for these accounts are provided in Exhibit\_\_\_(MJM-3). I will discuss each in turn below.

17 Account 380 – Services. Mr. Roff has proposed retention of the existing 40 S1 life  
18 and curve for this account. My SPR analysis results in a best fit life and curve of 60  
19 R1.5. Mr. Roff’s own SPR balances analyses for this account support a longer life than  
20 the one he is proposing. Only by using the most recent 5-year band do his resultant best-  
21 fit lives approach the 41 year mark. His longer bands support much longer lives. I  
22 recommend my best-fit 60 R1.5 life and curve for this account.

1        Account 381 – Meters. Mr. Roff has proposed a 20 R0.5 life and curve for this account.  
2        This is a 5-year life reduction from his proposal in the previous case. In conducting his  
3        analysis, he analyzed both accounts 381 and 382 separately and combined together. It  
4        appears he relied upon his combined analysis in his result. In my opinion the data for this  
5        account has been skewed by large recent additions. Furthermore, although the Company  
6        was authorized a depreciation rate of 3.81% for the meters account in the prior case, it  
7        appears to have used a rate of 3.25% instead.<sup>30</sup> This will have caused an understated  
8        depreciation reserve for this account. I recommend that the use of a 25 R0.5 life and  
9        curve for this account, consistent with Mr. Roff's results from his previous study.

10       Account 382 – Meter Installations. As with account 381, Mr. Roff has proposed a 20  
11       R0.5 life and curve for this account, relying on his combined analysis. The existing rate  
12       for this account is based on a 25 R0.5 life and curve. Unlike account 381, it appears  
13       Atmos has been using its authorized rate for this account. Because accounts 381 and 382  
14       are associated, I recommend the use of a 25 R0.5 year life and curve for this account.

## 15       **SUMMARY**

### 16       **Q.     PLEASE SUMMARIZE YOUR RECOMMENDATIONS.**

17       A.     My recommendations are individually discussed in my testimony above. In general:

- 18           •     I have recommended that the KCC recognize Atmos's non-legal AROs as a  
19           regulatory liability for ratemaking purposes in Kansas.
- 20           •     I have recommended that the KCC return the existing regulatory liability to  
21           ratepayers over the remaining life of the plant, resulting in an annual amortization  
22           of \$358,508.
- 23           •     I have recommended that instead of the Company's inflated net salvage  
24           proposals, the KCC should adopt a normalized cost of removal allowance  
25           proposals, the KCC should adopt a normalized cost of removal allowance  
26           proposals, the KCC should adopt a normalized cost of removal allowance

---

<sup>30</sup> Docket No. 03-ATMG-1036-RTS, Wp 10-1 and Exhibit DSR-2, Schedule 1.

1 approach based upon the most recent five years of actual experience. This will  
2 reduce Atmos's depreciation proposal by approximately \$1.1 million.

- 3
- 4 • I have recommend that Atmos's rates be calculated using the ALG procedure,  
5 instead of Mr. Roff's proposed ELG procedure.
- 6
- 7 • I have recommended longer lives for three accounts.
- 8

9 **Q. HAVE YOU CALCULATED NEW DEPRECIATION RATES BASED ON YOUR**  
10 **RECOMMENDATIONS?**

11 A. Yes, I have. My recommended rates are calculated in Exhibit\_\_(MJM-2). The sum of  
12 my recommendations results in an annual depreciation expense accrual of \$4.8 million  
13 for KS plant and \$21.4 million for Shared Services plant, based on plant as of September  
14 30, 2006. For KS plant, my recommended accrual is \$3.8 million less than Mr. Roff's  
15 proposal and \$2.4 less than that provided by the existing rates (based on September 30,  
16 2006 plant balances). For Shared Services plant, my recommended accrual is \$863  
17 thousand less than Mr. Roff's proposal and \$1.8 million greater than that provided by the  
18 existing rates.

19 **Q. HAVE YOU CALCULATED THE IMPACT OF YOUR RECOMMENDATIONS**  
20 **OF THE DEPRECIATION EXPENSE REQUESTED IN THIS CASE?**

21 A. Yes. My recommendations result in \$2.8 million reduction from Atmos's book  
22 depreciation expense for the test year, a \$3.9 million reduction from the Company's  
23 request. This calculation is shown on page 6 of Exhibit\_\_(MJM-2)

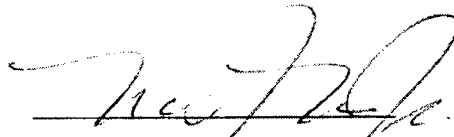

24 **Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

25 A. Yes, it does.  
26

**VERIFICATION**

Washington, )  
District of Columbia ) ss:

The undersigned, being of lawful age and upon oath duly sworn, states that he is a consultant for the Citizens' Utility Ratepayer Board et. al., that he has read the foregoing testimony, knows the contents thereof; and that the statements contained therein are true.

  
Michael J. Majoros, Jr.

Subscribed and sworn to before me this 31<sup>st</sup> day of January, 2008.
